## Canadian Northern Railway's Temporary Passenger Station, etc., in Montreal.

The Canadian Northern Ry.'s temporary passenger station at the corner of Lagauchetiere and St. Monique Streets, Montreal, is practically completed. It is a reinforced concrete structure, with two stories above grade and one below. The

side by a retaining wall 18 ft. high, which is run back for 50 ft. The court is 33 ft. wide and is paved with brick. It will serve as a wagon approach to the incoming baggage room, which has two wide doors opening directly on the court.

At its right descends a broad staircase, leading directly to the trains. There is also an entrance to the women's waiting room from the entrance vestibule and it contains space for telegraph office and news stand. The arrangement of the en-

PLAN OF FIRST FLOOR

PLAN OF TRAIN FLOOR

#### The Canadian Northern Ry.'s Temporary Station in Montreal.

Since the plan shown above, in the lower left hand corner of the group, was made, the space originally intended for a women's waiting room has been made into a men's smoking room, and the space originally intended for a men's smoking room has been made into a women's waiting room. The lavatory arrangements, as shown on the plan, have been reversed.

grilles. In the main waiting room the seats are of the latest model, placed back to back, with a radiator between each pair. This will give an efficient heating

immediately below, at the train level. There is a staircase in the incoming baggage room, which also leads down to the train level.

From the women's waiting room are doors leading to the entrance vestibule and to the staircase hall. This hall, at the right hand end of the entrance vestibule

The left view shows the rear of the station, from Dorchester St. Bridge, the right view is looking towards Mount Royal tunnel portal, from the rear of the station.

system and at the same time all the radiators are concealed. Along the tops of the seats are lines of electric lights with reflectors.

At the left of the main waiting room is the incoming baggage room, with an

Onposite the incoming baggage room, at the right of the main waiting room, are the men's smoking room and the women's waiting room, with lavatories between. Both of these rooms have windows facing on St. Monique St. They are good sized

contains broad concrete stairs, leading to the train level, and a narrower staircase to the offices on the second floor. Descending the staircase, the passenger will arrive in the lower staircase hall, which in turn opens to the concourse. The con-

course contains approximately 3,500 sq. ft., and is separated from the train room by an iron and glass screen, immediately inside of which is the baggage runway, connecting to the outgoing baggage room at the left. The outgoing baggage room is immediately below the incoming baggage room on the first floor, and is of the same dimensions, and as previously stated, is connected with it by a staircase and

large freight elevator.

There are five tracks arranged in the present construction. From the baggage runway, ramps with a grade of 5% descend to the platform level.

To the right of the baggage runway are the machinery and storage rooms, and here are installed the apparatus for heating the water supply to the lavatories and cooling the drinking water. The

heating plant for the building is installed in a separate structure behind the outgoing baggage room.

Along the Lagauchetiere St. front, on the second floor level, is approximately 4,000 sq. ft. of office space, which is to be subdivided later when its uses are determined. On this floor are lavatories and other facilities required for use of the office staff.

## Passenger Car Cleaning on the Canadian Pacific Railway.

By E. Eley, Master Car Builder, Eastern Lines, C.P.R.

Cleaning passenger equipment cars is one of the operations all railways have to expend large amounts of money for yearly, and clean cars is one of the things the travelling public appreciate. Those of us who travel know this from the remarks we hear from passengers. Very few of them, however, know what a vast amount of labor must be spent to keep cars clean and in a sanitary condition.

In this paper I will endeavor to conduct them through a train just arriving from a five days trip across the continent. We will start at the rear end and walk through, noting its condition. If it is in the dry season and ties have been put in the track recently, we have dust covering everything, and it has got into the plush seat covering, carpets and bedding. Beside this, there is the usual amount of paper, orange peel, bottles, etc.

Before we can start our cleaning we find some of the cars are due to be fumigated, which is done once a month; upper berths have to be opened, and blankets, pillows, berth curtains and mattresses spread out so that the fumes will penetrate every part of the equipment, locker doors and lavatories must be opened and all windows and ventilators closed. For an ordinary fumigation, one sheet is used, saturated with formaldehyde and hung up in the centre of the car. The car is then closed up, locked and left for at least an hour and a half, after which it is opened and ventilated for the cleaners to go in. For a thorough fumigation, which is used in cases of actual infection, three sheets are used, saturated with formaldehyde, and hung up, one in each end, and one in the center of the car, and the car left closed at least three hours, after which it may be opened and ventilated.

From sleeping cars, carpets, bedding, seats and seat backs have to be removed from the car for cleaning and airing. To clean these, the following is the usual practice: Blankets and berth curtains are shaken, mattresses are beaten or blown with air, seats and backs are either blown with air or cleaned with vacuum. The carpet is first swept off and then blown with air. All this equipment is then laid on racks or trestles until the interior of the car is cleaned thoroughly and made ready to receive it again.

The interior of the car is cleaned from the headlining to the floor. First we have to get rid of the dust. Deck sash are opened and dust wiped out with a disinfectant solution in the water, dust is got out from between and above the window sash by hammering with the hand, and window sticks covered with a cloth. When we have got down all the dust we can, the floor is swept out. We start again at the headlining and wash it, including the deck sash down to the deck sash rail. All the woodwork below this has to be wiped down, and if necessary washed with castile soap and warm water, and finally the floor and steam pipes are washed with a disinfectant solution in the water; this

includes toilets under washstands, and lockers. Now it is ready to receive the bedding, etc. When this is stowed away, seats and backs are replaced. The woodwork is gone over and polished, sometimes using a renovator; nickel and mirrors are all cleaned and polished, the carpet is laid, and the final finishing touches are given to the car. Passage ways and vestibule floors are scrubbed and a canvas strip laid down and left there until the train is ready to back into the station. This work takes about 35 hours, and with the exception of washing the headlining and polishing the woodwork, where a renovator is used, is performed by two men and a woman, and costs about \$15.50 a car.

This work is performed on observation, sleeping and tourist cars, once in seven days, or in the case of transcontinental trains they are stripped at Montreal or Toronto and Vancouver, which is once in six days. On shorter runs the cleaning given this equipment between strippings is an ordinary cleaning, consisting of sweeping carpets, dusting and wiping woodwork, cleaning windows, mirrors, nickel, etc., and finally vacuuming the cushions, backs and carpet, scrubbing floors in passage ways and vestibules.

We will now take the day cars. We do not remove seats or seat backs from them, windows are opened and the car is swept out then dusted down, headlining washed if necessary, floor and steam pipes scrubbed with a disinfectant solution, and, if necessary, all, or part of the interior, washed down, windows, mirrors and nickel cleaned and polished, seats and backs in the first class are vacuumed and aisle strip blown with air, and laid, and the car is ready for service. If cars are cleaned in the morning and do not leave until night, they quite frequently have to be dusted again just prior to departure.

In the baggage and express cars, the fish racks are lifted and pits swept out, and then rack and pits are scrubbed with clean water without disinfectant, then pits and racks are sprinkled with lime and racks replaced. As necessity requires, these cars are washed down from roof to floor, as being on the front end of trains they get very dirty from smoke from the locomotive. The reason we do not use disinfectant in the water for scrubbing baggage cars is, it would taint some of the commodities carried in them.

Mail cars are cleaned in the same way, except that the floors are scrubbed with disinfectant in the water. This completes the inside cleaning. The outside is cleaned by washing or wiping, according to weather conditions, but the best results are obtained by wiping when it is possible to do so. The windows are occasionally gone over with a little muriatic acid in water whenever necessary to cut the dirt or scum which accumulates, and then washed with clear water. vestibules and steps are wiped down and brass work polished. This is an ordinary cleaning

which they get every time they are in the terminal, but even with this cleaning, in two or three months they get dirty, to such an extent that the numbers cannot be seen, then they are given a terminal cleaning, which consists of scrubbing them with some approved cleaner and thoroughly washing it off, and the car looks as though it had only just come out of the shops.

The people who perform this work are composed of all nationalities, some of them make pretty good car cleaners and others never will. This, then, is the element with which we have to get this work done, and you can readily see it requires the closest supervision to get it done properly. I once saw a woman who was on the terminal cleaning, and using our standard cleaner, put her brush into some fine sand and start to scrub some spots on the outside of the car to remove some excreta which had become dried on so hard that it was almost impossible to remove it without taking off the varnish. She was a foreigner and no doubt in her own home in the country she came from the practice was to use sand and water to scrub the floors. You can readily understand what it means to educate such people and make car cleaners of them.

To supervise work of this nature requires men of energy and patience, and they, like people working under them, require special training, otherwise the class of cleaning deteriorates, then it becomes necessary to make a crusade on better cleaning, and some of our foremen will tell you this occurs quite frequently. It has always been our desire to give our patrons clean and sanitary cars to travel in, and few of them realize the amount of labor which is expended on the equipment for their comfort.

The foregoing paper was read before the Canadian Railway Club in Montreal.

**Steel Rail Deliveries.**—We were officially advised Sept. 9 that the Dominion Iron & Steel Co., Sydney, N.S., had rolled 72,708 tons of steel rails out of the 100,000 tons ordered by the Dominion Government and that 62,973 tons had been shipped to railways as below:

	Tons.	Lbs.
Canadian Govt. Rys. ....	11,280	600
Canadian Northern Ry. ....	17,349	1,690
Canadian Pacific Ry. ....	23,679	540
Grand Trunk Ry. ....	10,314	840
Toronto, Hamilton & Buffalo Ry. ....	351	1,910

The Dominion Transportation Co. has been incorporated under the British Columbia Companies Act, with authorized capital of \$10,000 and office at Victoria, to carry on business as general carriers, railway and forwarding agents and warehousemen, and to operate touring and sight-seeing cars and other similar public conveyances.

The Algoma Central & Hudson Bay Ry. announced Sept. 1, that with the exception of two and a half townships, all its land grants will be thrown open for prospecting purposes for two years.

## Maintenance of Way Flagging Rules for Impassable Track.

The Canadian Railway War Board applied to the Board of Railway Commissioners recently for an order to amend general order 188, re uniform maintenance of way flagging rules for impassable track, so as to provide for the use of the Brennan signal, or a device of a similar character, in lieu of manual flagging as required by general order 188. The board passed general order 248, Aug. 19, amending general order 188 in several particulars. As amended it now reads as follows:

1. Before undertaking any work which will render the main track impassable, or if rendered impassable from any cause or defect, trackmen, bridgemen, or other employees of the company shall protect the same as follows:

2. (a). On double track; (b) on three or more tracks; (c) in mountain territory; and (d) on all lines with frequent or fast train service—

Send out a flagman in each direction with stop signals, at least 1,500 ft. in daytime, if there is no down grade toward the obstruction within one mile, and there is a clear view of 6,000 ft. from an approaching train; 3,600 ft. at other times and places, if there is no down grade toward the obstruction within one mile; 5,400 ft. if there is a down grade toward the obstruction within one mile. The flagman must, after going the required distance from the obstruction to insure full protection, take up a position where there will be an unobstructed view of him from an approaching train of, if possible, 1,500 ft., first placing two torpedoes on the rail (not more than 200 nor less than 100 ft. apart), on the same side as the engineer of an approaching train, 300 ft. beyond such position. The flagman must display a red flag by day and a red light by night, and remain in such position until recalled or relieved.

3. On other lines—

(a) By day place a red flag and, in addition, by night a red light, on the same side of the track as the engineer of an approaching train, at a point 600 ft. from the defective or working point, with two torpedoes placed on the rail opposite each other so as to cause but one explosion, 150 ft. in advance of the red signal, and provide further protection as follows:

(b) By day place a red flag, and, in addition, by night, a red light, on the same side of the track as the engineer of an approaching train so that it will be clearly in his view, at least 3,600 ft. from the defective or working point, if there is no down grade toward the obstruction; 5,400 ft. if there is a down grade within one mile of the obstruction, or as much farther as may be necessary to ensure full protection.

(c) Place two torpedoes (not more than 200 nor less than 100 ft. apart) on the rail on the same side as the engineer of an approaching train, 300 ft. in advance of the red signal.

(d) Between sunset and sunrise, and during stormy, foggy, or smoky weather conditions, flagmen must be placed instead of the outer signals referred to in clause (b).

4. Trains stopped by flagman, as per rule 2 and rule 3 (d), shall be governed by his instructions and proceed to the working point or working point signal, as the case may be, and there be governed by signal or instructions of the foreman in charge.

5. Trains stopped by red signal, as per

rule 3 (c), shall replace the torpedoes exploded and proceed to the working point signal, and there be governed by signal or instructions of the foreman in charge, unless in the meantime stop signal has been removed.

6. In the event of train order protection being provided, the defective or working point must be marked by signals placed in both directions as follows: Yellow flags by day and in addition yellow lights by night, 3,600 ft. from the defective or working point; red flags by day, and in addition red lights by night, 600 ft. from the defective or working point, on the same side of the track as the engineer of an approaching train; except on double track, where trains run to the left, in which case signals shall be placed to the left hand side as seen by an engineer of

red fuses, and a supply of matches.

The foregoing rules be printed in railway companies working time tables for the guidance of all employees. Subdivisions to be named, setting out which of the rules are applicable to each.

General orders 161, Feb. 23, 1916, and 216, Jan. 24, 1918, are rescinded.

**Increased Locomotive Production.**—At a meeting of representative locomotive builders in Washington, D.C., recently, with representatives of the War Industries Board the Railroad Administration, and government departments, one of the heaviest problems connected with the direction of war work—an adequate supply of railway locomotives—was solved. Plans were worked out whereby the output of the U. S. locomotive manufacturing plants will be doubled, the increase being from more than 3,000 on a pre-war basis to more than 6,000 completed locomotives. An equitable distribution of the output to meet the military needs in France and the

Jig for holding trailer truck braces for boring.

The illustration above shows a jig used at the C.P.R. Shops, Ogden, Alta., for boring trailer truck braces. The face plate of the duplex rod boring machine is drilled to take the cap studs for holding the jig.

an approaching train, and there is a clear view of at least 1,200 ft.

7. When weather or other conditions obscure day signals, night signals must be used in addition.

8. "Frequent service" shall mean nine or more trains a day and "fast train service" shall mean a service at a speed of 35 miles or more an hour.

9. That the Brennan signal device, as approved by the board, or a signal of an equally serviceable type attached to the base of the rail, to be approved by the board, be used to display the signals directed to be provided under rules 3 (b) and 8 (yellow signal) of this order and rule 35 (yellow signal) of the Uniform Code of Operating Rules.

10. Flagmen must each be equipped for day time with a red flag and 4 torpedoes, and for night time, and when weather or other conditions obscure day signals, with a red light, a white light, 4 torpedoes, 3

needs of the Railroad Administration for the steam railways in the United States has been provided by the chairman which has met the approval of the government officials involved.

**New York Ticket Offices.**—A new York dispatch says the large ticket office in the world, the United States Railroad Consolidated Ticket Office, was opened at 64 Broadway, Sept. 5. Other offices were opened at 57 Chambers St., and 114 West 42nd St., Manhattan, and 336 Fulton St., Brooklyn. The Broadway office has more than 60 employees. All the trunk lines out of New York and the Sound and coast-wise steamship lines are represented.

The Reid Newfoundland Co. has given notice that, on and after Oct. 5, it will increase its freight rates 20% on traffic moving from North Sydney or Louisburg to all rail and steamship points on its system, either via Port aux Basques and rail or via direct boats to St. John's, Nfld.

# Canadian Northern Railway's Bridge over the St. Maurice River at Grand Mere.

A new bridge, replacing the old cantilever, has been completed recently on the Canadian Northern Ry. Eastern Lines, over the St. Maurice River, about a mile east of Grand Mere, Que. The bridge, as seen in the plan, fig. II, consists of two 100 ft. deck plate girder spans, two 115 ft. deck truss spans, one 250 ft. deck truss span and one 38 ft. deck plate girder span. The old cantilever bridge, shown as fig. I, was built by the Dominion Bridge Co., in 1895, and was flanked on the western side by a 100 ft. deck lattice span, the remaining portions of the depression being served by wooden trestles. In 1910 the western wooden trestle was burned and the lattice span wrecked by a train, the bracing of the west anchor arm of the cantilever being at the same time slightly damaged. To take the place of the destroyed trestle and lattice span, a

erection stresses were nowhere large enough to affect the sections of the truss members, so that no extra metal was necessitated by erecting in this manner. The west truss span was erected first. A timber bent was built at the center of this span and the truss was assembled by means of a Bay City derrick car working from the old bridge. A 12-ton stiffleg derrick was then set up on the span, on trucks which ran on the top chords, and with this derrick the west half of the channel span was erected, cantilevering out from pier 3. The 115 ft. span was used as an anchor arm and additional counterweight over and above the weight of the steel was secured by anchoring the free end of this truss span to pier 4, using, for this purpose, two 2 in. dia. bolts 17 ft. 2 in. long, at each corner. The east half of the bridge was then erected in

lowered still more, the diagonal connection and top chord splices were bolted. As soon as the top chords touched at the center the loosening of the anchorage was stopped and the span was left partially suspended until all the splice rivets were driven in the bottom chord. This method insured tight joints in the bottom chord splices and secured a very satisfactory camber. The ends of the anchor spans were then jacked up and the erection links removed. The top chords, being now in compression, were riveted under the best possible condition. All the end bottom struts were designed to permit of jacking, so that the pier members may be repaired or renewed at any time. The deck steel was put in the anchor spans as they were erected, but the stringers and stringer bracing of the channel span were omitted until the anchor spans were jacked up,

Canadian Northern Railway's Old and New Bridges Over St. Maurice River at Grand Mere, Que.

steel trestle, consisting of 2 bents and 3 deck plate girder spans, was constructed by the Dominion Bridge Co. In 1915 the sway and stringer bracing of the main cantilever were reinforced and in this condition the old structure served to carry the traffic until the summer of 1918.

In order to reduce the excessive grade at this point the track has been raised 15 ft., which makes the distance from base of rail to ground line for the intermediate piers about 70 ft., and in order to minimize the height of the piers the trusses were made deeper than would otherwise have been necessary. The truss spans only are new this year, the eight-year-old girders from the trestle mentioned above being used on new piers. The side truss span has 4 panels at 28 ft. —1½ in., and is 35 ft.—9½ in. deep, while the channel span has 8 panels at 30 ft. 9 in. and is 36 ft. deep to the center of gravity of chords. The chords and diagonals of the trusses are built up box sections, while the posts are I sections, composed of a web plate and four angles. The pier members are steel castings, with pin bearing between truss and shoes. There are the usual two lines of plate stringers heading into the floorbeams.

The piers being about 50 ft. high and the river very deep, erection by the cantilever method was naturally adopted. The

precisely the same manner.

The cantilever portion was connected to the anchor span of the top chords by four 12 x 1 in. plate links on 5 in. dia. pins, and at the bottom chords were held apart by cast steel rocker blocks. These links were made 4¼ in. short of the normal length, in order that the ends of the cantilevers at the center of the channel would be elevated above normal to facilitate making the center connection. The expansion pier members were arranged to accommodate the expansion of the bottom chords during the change from the cantilever to the simple span conditions. To permit of a final adjustment in case the chords did not meet at the center of the channel span, both pier members on pier 3 were on rollers, on which the west half, both cantilever and anchor span, could be moved a few inches forward or backward as might be necessary. However, no such adjustment was necessary, as when the last section of bottom chord was lowered into place it fitted perfectly and the bolts connecting it to the center bottom lateral plate were put in place without difficulty. The anchorages were then gradually loosened, allowing the middle of the channel span to descend, and as the holes in the gusset plate came to a match with those in the web of the bottom chord the bolts were entered, and, the span being

and the cantilever condition removed, thereby minimizing the erection stresses. In the meantime, these stringers were placed on the ends of the anchor spans, giving additional counterweight, as it was considered advisable to keep the strain on the erection anchors in the concrete piers as low as possible.

After the trusses were completed the 40 ft. deck plate girder span was removed from the trestle posts, fitted with new pier members and placed in position at the east end of the bridge. Traffic was carried across the opening thus created in the old structure by 3 beam spans supported on a timber tower, which was built before the girders were removed. Moving the two 100 ft. girder spans was accomplished on Sunday, April 14, trains being run over the old bridge on the Saturday and over the new one on the Monday. These spans, being too heavy to be handled as a whole, were cut apart, and the separate girders removed by means of two 30-ton derrick cars, which have a capacity of 16 tons at 25 ft. radius. One car worked on the west end of the old bridge, and the other on the new truss spans. The girders weighed 31 tons each and special care had to be taken in hitching to these so that the cars would not be overloaded. The first steel was erected on Feb. 1, the channel span was connected

at the center on April 2, and riveting of the trusses was completed about June 3. The steel on the two 115 ft. trusses weighed 616,650 lb., in the 250 ft. span 936,000 lb., and the total steel in the structure, including girder spans, about 1,890,000 lb. The superstructure was designed and built by the Dominion Bridge Co.,

the writer having special charge of the design and the development of the erection scheme. The whole work was subject to the approval of W. P. Chapman, Engineer of Bridges, C.N.R., and C. H. Connell, Engineer, Quebec Division, C.N.R.—By H. M. White, of Dominion Bridge Co., in Contract Record.

## Birthdays of Transportation Men in October.

Many happy returns of the day to:

J. L. Abell, Chief Dispatcher, Sudbury Division, Algoma District, C.P.R., Sudbury, Ont., born at Morganfield, Ky., Oct. 3, 1884.

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

Major Graham A. Bell, C.M.G., acting Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Oct. 13, 1874.

L. S. Brown, General Superintendent, Eastern Lines, Canadian Government Railways, Moncton, N.B., born at Nelson, N.B., Oct. 19, 1864.

F. F. Busteed, formerly Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, Sales Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1875.

C. E. Cartwright, ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Oct. 13, 1864.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

J. W. Doyle, General Manager, Cape Breton Ry., St. Peters, N.S., born at Summerside, P.E.I., Oct. 12, 1872.

L. V. Druce, Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at London, Eng., Oct. 20, 1873.

R. G. Edwards, Assistant Superintendent, Trenton Division, Ontario District, C.P.R., Havelock, Ont., born at Maitland, Ont., Oct. 10, 1883.

C. E. Friend, General Auditor, Canadian Northern Ry., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

C. N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant to General Manager, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Montreal, born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., born there, Oct. 8, 1872.

K. deS. Joseph, Assistant Trainmaster, C.P.R., Sudbury, Ont., born at Quebec, Que., Oct. 6, 1892.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, born at Three Rivers, Que., Oct. 12, 1861.

O. M. Lavoie, Superintendent of Car Service, Eastern Lines, C.P.R., Montreal, born at St. Cyril de Wendover, Que., Oct. 16, 1884.

F. McDowell, Storekeeper, Canadian Northern Ry., Winnipeg, born there, Oct. 22, 1883.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper has a continuous record of the Board's proceedings. No other paper has done this.

General order 247. Aug. 6.—Approving standard stop signal at railway grade crossings protected by watchmen.

General order 248. Aug. 19.—Amending rules approved by general order 188, Apr. 23, 1917, re uniform maintenance of way flagging rules for impassable tracks. This order is given in full on another page.

General order 249. Aug. 31.—Approving standard freight tariffs of maximum mileage tolls of 38 railways filed on basis prescribed by order in council 1563, July 27, re increased freight rates.

27546. Aug. 2.—Ordering C.P.R. to re-establish local service in effect between Tweed and Toronto prior to Jan., 1918, between Apr. 15 and Dec. 1 each year.

27547. Aug. 12.—Ordering Grand Trunk Pacific Ry. to build farm crossing for Geo. Robinson, Leaman, Alta.

27548. Aug. 12.—Authorizing C.P.R. to build two spurs for Spanish Mills Co., Lewis Tp., Algoma District, Ont.

27549. Aug. 13.—Ordering Canadian Northern Ry. to install one pen stock yard at Fiske, Sask., to be completed by June 1, 1919.

27550. Aug. 13.—Declaring on complaint of David Spencer, Ltd., Vancouver, B.C., that proper rates on shipments of hats and caps other than millinery taking 1st class rating in current Canadian Freight Classification, were appearing in item 249, Canadian Freight Association's west-bound tariff 1, effective Sept. 20, 1916.

27551. Aug. 14.—Dismissing application of Colchester South Tp., Ont., to make highway crossing over Pere Marquette Ry. at Oak St., Harrow, Ont.

27552. Aug. 13.—Approving agreement between Bell Telephone Co. and Goulais Bay Telephone Club, Algoma District, Ont.

27553. Aug. 14.—Authorizing Toronto, Hamilton & Buffalo Ry. to build branch for Ford-Smith Machine Co., Hamilton, Ont.

27554. Aug. 15.—Authorizing New York Central Rd. to extend passing siding at Beauharnois, Que., about 1,500 ft. north of Beauce highway crossing.

27555. Aug. 13.—Approving agreement between Bell Telephone Co. and Bowesville Telephone Co., Carleton County, Ont.

27556. Aug. 14.—Relieving Canadian Northern Ry. from erecting fences, gates and cattleguards at points on its Blue River and Lucerne Subdivisions in British Columbia and Alberta.

27557. Aug. 14.—Dismissing Beverly Coal Co.'s application for running rights over portion of spur between Grand Trunk Pacific Ry. and Humblerstone Coal Co.'s line to proposed Beverly Mine spur, Alta.

27558. Aug. 13.—Ordering Toronto, Hamilton & Buffalo Ry. to stop train 71 at Smithville, Ont., for milk shipments.

27559. Aug. 14.—Proportioning cost of installing transfer track at Yorkton, Sask., between the C.P.R. and Canadian Northern Saskatchewan Ry.

27560. Aug. 13.—Ordering Canadian Northern Ry. to build standard portable station at Fallowfield, Ont., to be completed Sept. 30.

27561. Aug. 19.—Authorizing Canadian Northern Ry. to build spur for Imperial Oil, Ltd., Vermilion, Alta., and to cross Railway St.

27562. Aug. 16.—Authorizing Canadian Northern Ry. to build spur for Canadian Consolidated Rubber Co., St. Jerome, Que.

27563. Aug. 19.—Authorizing G.T.R. to build spur for Dupont Fabrikoid Co., New Toronto, Ont.

27564. Aug. 19.—Approving agreement between Bell Telephone Co. and North Gosfield Tp., Ont.

27565. Aug. 16.—Authorizing Saskatchewan Government, on behalf of Mervin Rural Municipality, Sask., to make highway crossing through Canadian Northern Ry. station grounds at Turtleford, Sask.

27566. Aug. 17.—Authorizing G.T.R. to build spur for Woods Mfg. Co., east of Logan Ave., Toronto.

27567. Aug. 16.—Approving Canadian Northern Quebec Ry. plan of proposed bridge reconstruction over Riviere a Pierre, Lake St. John Division, 57 miles from Quebec.

27568. Aug. 16.—Dismissing complaint of Minnesota & Ontario Power Co., International Falls, Minn., against increased rates on pulpwood from Canadian Northern Ry. station to International Falls, Minn.

27569. Aug. 21.—Authorizing Canadian Northern Ry. to open for traffic its branch to Cardiff Mines, Alta.; trains not to exceed 15 miles an hour; fencing to be completed by Nov. 1.

27570. Aug. 21.—Authorizing G.T.R. to build three spurs for Motor Trucks, Ltd., Brantford, Ont.

27571. Aug. 21.—Relieving C.P.R. from providing further protection at Lachardies Crossing, near Kirks Ferry, Que.

27572. Aug. 23.—Extending to Apr. 10, 1919, time within which overhead bridge may be completed across C.P.R. on Hamilton St., Regina, Sask.

27573. Aug. 22.—Authorizing Canadian Northern Ry. to rebuild bridge over Riviere a Pierre, Lake St. John Division, 59.5 miles from Quebec.

27574. Aug. 22.—Authorizing Canadian Northern Ry. to rebuild bridge over Miquiquet River, Lake St. John Division, 75 miles from Quebec.

27575. Aug. 21.—Authorizing G.T.R. to build extension of spur for Battle Creek Toasted Corn Flake Co., London, Ont.

27576. Aug. 21.—Authorizing C.P.R. to build extra track across road allowance between southeast  $\frac{1}{4}$  Sec. 4 and southwest  $\frac{1}{4}$  Sec. 3, Tp. 23, Range 14, west 2nd meridian, Sask.

27577. Aug. 21.—Authorizing G.T.R. to rebuild bridge carrying Birchmount Ave., Scarborough Tp., York County, Ont., over its main line at mileage 326.5 from Montreal.

27578. Aug. 22.—Relieving Canadian Northern Ry. from erecting fences, gates and cattleguards at about 84 points, and temporarily relieving C.N.R. from erecting fences, gates and cattleguards at about 44 other points on its Kamloops Subdivision until land in the vicinity becomes settled or improved.

27579. Aug. 26.—Authorizing Point Grey Municipality, B.C., to make highway crossing over Vancouver & Lulu Island Ry.

27580. Aug. 23.—Authorizing C.P.R. to build spur for Rob Roy Mills, Ltd., Durham, Ont.

27581. Aug. 23.—Authorizing British Columbia Public Works Department to make highway crossing at grade over C.P.R. near Tappen, B.C.

27582. Aug. 26.—Dismissing application of New Minas Fruit Co., White Rock, N.S., to continue service on applicant's siding without charge in excess of regular freight rate.

27583. Aug. 21.—Ordering Michigan Central Rd. to divert North Talbot Road, Maidstone Tp., Ont., to Naylor Side Road, north of its tracks and to install two automatic bells.

27584. Aug. 24.—Approving clearances at C.P.R. sidings serving Canadian General Electric Co., Peterborough, Ont.

27585. Aug. 26.—Approving plans of C.P.R. and Grand Trunk Pacific Ry. interchange track at Forrest, Man.

27586. Aug. 30.—Authorizing Canadian Northern Ry. to rebuild bridge over Batiscan River at Beaudet, Que.

27587. Aug. 30.—Ordering Grand Trunk Pacific Ry. to make highway crossing at Telkwa, B.C., 90 ft. east of present crossing.

27588. Aug. 13.—Approving location and plans of G.T.R. station and facilities at Glen Robert, Ont.

27589. Aug. 22.—Authorizing Cleveland Municipality, Ont., to close two highway crossings over G.T.R. near Richmond station.

27590. Aug. 23.—Approving plan of half interlocking plant at crossing of C.P.R. and St. John Ry., on Main St., Fairville, N.B.

27591. Aug. 21.—Amending order 27530, Aug. 2, re C.P.R. and Canadian Northern Ry. train connections at Montfort Jct., Que.

27592. Aug. 26.—Amending order 26627, Oct. 10, 1917, re C.P.R. train service at Minnitaki, Ont.

27593. Aug. 21.—Authorizing Canadian Northern Ry. to rebuild bridge over Batiscan River Falls, 110 miles from Quebec.

27594. Aug. 20.—Authorizing C.P.R. to build spur for Albert Kerr Co., York Tp., Ont.

27595. Aug. 31.—Amending order 27523, Aug. 7, re G.T.R. spur for W. Harris & Co., Toronto.

27596. Sept. 3.—Authorizing Saskatchewan Highways Department, on behalf of Blaine Lake rural municipality 434, to make highway crossing over Canadian Northern Ry., north of n.e.  $\frac{1}{4}$  Sec. 16, Tp. 45, Range 6, west 3rd meridian.

27597 to 27603. Sept. 3.—Approving Canadian Northern Ry. revised location at 7 points in Alberta.

27604, 27605. Sept. 3.—Approving Canadian Northern Ry. revised location at 2 points in Alberta.

27606. Sept. 3.—Authorizing Saskatchewan Highways Department, on behalf of Meota rural municipality no. 468, to make crossing over Canadian Northern Ry. north of Sec. 5, Tp. 47, Range 17, west 3rd meridian.

27607. Aug. 31.—Approving plan, dated Toronto, Aug. 16, showing proposed repairs to Canadian Northern Quebec Ry.'s Batiscan River Bridge, second pier from west end, at mileage 65.8, Joliette Subdivision, Que.

27608. Aug. 26.—Ordering Dominion Atlantic Ry. to build siding for Wolfville Fruit Co., Wolfville, N.S., at no greater cost to applicant than it would have to pay for siding accommodation had D.A.R. site been used.

27609. Aug. 30.—Approving revised plans, dated Apr. 2, showing electrification of Sec. 1, Mount Royal Tunnel & Terminal Co.'s railway from Lagacheville St. to east portal of tunnel.

27610. Sept. 3.—Extending to Oct. 1 time within which C.P.R. shall build two-pen stock yard at Cairns, Alta.

27611. Sept. 4.—Approving Canadian Northern Western Ry. revised location in n. w.  $\frac{1}{4}$  Sec. 7, Tp. 57, Range 7, west 5th meridian, Alta.

27612 to 27615. Approving Canadian Northern Ry. revised location at 5 points in Alberta.

27616. Aug. 22.—Ordering C.P.R. to install gates at Cote de Liesse Road, Dorval, Que., to be operated from the central tower by day and night watchmen; construction to be paid—20% by rail-

way grade crossing fund, 35% of balance by Dorval, 15% by Parish de la Presentation de la Ste. Vierge, and remainder by C.P.R.; maintenance to be paid, 50% by C.P.R., 35% by Dorval, and 15% by the parish; gates to be installed within 30 days from date.

27617. Sept. 4.—Authorizing London & Port Stanley Ry. to build sidewalk along right of way, from Terrace St., north along east side of track, and across Thames River; thence west, under track and north, on west side of track to Trafalgar St., London, Ont.

27618. Sept. 4.—Amending order 27464, July 23, re removal of G.T.R. siding for Lindsay Factories, Ltd., Toronto.

27619, 27620. Sept. 3.—Approving Canadian Northern Ry. revised location at 3 points in Alberta.

27621. Sept. 4.—Ordering C.P.R. to stop train 4 at Ducks station, B.C., for safe delivery of parcel post matter.

27622. Sept. 4.—Extending to Oct. 1 time within which Canadian Northern Ry. shall erect station building at Sangudo, Alta.

27623. Sept. 3.—Ordering Canadian Northern Ry. to stop local trains 7 and 8 on flag at Clarence, Ont.

27624. Sept. 3.—Extending to Sept. 30 time within which C.P.R. shall complete removing old piles and abutments from bed of Big Creek, in Tilbury North Tp., Ont.

27625. Sept. 5.—Authorizing C.P.R. to divert road allowance between Secs. 8 and 9, Tp. 3, Range 1, west principal meridian, Man., and take certain lands for eliminating grade crossing and protection from snow.

27626. Aug. 30.—Approving agreement, Aug. 13, between Bell Telephone Co. and Burgessville Telephone Co., of Ontario.

27627. Aug. 17.—Ordering that A. B. Pottenger, District Registrar of Supreme Court of British Columbia, Vancouver, be appointed to enquire and report on cost of building Hastings St. viaduct over Vancouver, Victoria & Eastern Ry. in Vancouver.

27628. Sept. 5.—Relieving Great Northern Ry. from providing further protection at first crossing east of Lincoln station, B.C.

27629. Sept. 4.—Approving C.P.R. plans B-1-1549 and B-10-56, Aug. 3 and Aug. 2, showing proposed replacement of wooden trestles at bridges 36.4 and 36.97 over Frenchman River, Govenlock Subdivision, Sask.

27630. Sept. 5.—Authorizing C.P.R. to build Y crossing at grade over surveyed road at mileage 49.4, Maple Creek Subdivision, Sask.

27631. Sept. 5.—Authorizing C.P.R. to cross Minerve St., Vulcan, Alta., at grade.

27632. Sept. 5.—Authorizing Canadian Northern Ry. to cross highway between Secs. 16 and 17, Tp. 5, Range 5, west 3rd meridian, Sask.

27633, 27634. Sept. 4.—Extending to Oct. 15 time within which G.T.R. shall install gates at St. Philippe St. and St. Marguerite St., Montreal, day and night watchmen to be employed.

27635. Sept. 7.—Authorizing C.P.R. to build spur for B. J. Carney & Co., from mileage 2.27, Okanagan Subdivision, B.C., to edge of Mara Lake, with parallel siding.

27636. Sept. 5.—Extending to Dec. 31 time within which C.P.R. shall complete spur for E. W. Gillett Co., and revise present sidings on Liberty St. and Pardee Ave., Toronto.

27637. Sept. 5.—Authorizing C.P.R. to build spur for Garden City Feeder Co., Regina, Sask.

27638. Relieving Canadian Northern Ry. from erecting fences, gates and cattleguards between mileage 1 and 116 on its Port Mann Subdivision, B.C.

27639. Sept. 5.—Authorizing C.P.R. to build spur for W. Rankins, at mileage 56.6 on Kootenay Central Subdivision, B.C.

27640. Sept. 5.—Authorizing C.P.R. to build spur for Adams River Lumber Co., Chase, B.C.

27641. Sept. 6.—Authorizing Canadian Northern Ry. to divert North Road and water course at Portage Lake, McDougall Tp., Ont.

27642. Sept. 5.—Authorizing Canadian Northern Ry. to cross highway between Secs. 9 and 16, Tp. 51, Range 5, west 3rd meridian, Sask.

27643. Sept. 4.—Amending order 26205, Dec. 3, 1917, re installation of gates at crossing of Walker Road, Walkerville, Ont., G.T.R. and Pere Marquette Ry.

27644. Sept. 7.—Relieving Canadian Northern Ontario Ry. from speed restriction imposed under order 22113, July 2, 1914, between mileage 174 and 175.25, and 181 and 181.25 from Toronto.

27645. Sept. 7.—Relieving Grand Trunk Pacific Ry. and Canadian Northern Ry. from speed limitation of 18 miles an hour on tangents and 12 miles on curves, imposed by order 26972, Feb. 9, on joint section from Lobstick Jct., to Chip Lake, Alta.

27646. Sept. 9.—Approving Montreal & Southern Counties Ry. timetable effective Aug. 11, company to stop all trains during winter and all trains except limited trains 135, 139, 443, 136 an 430 during summer at St. Hubert Road; all local trains to stop at Springfield Park; and rescinding orders 26286, 26325 and 26540.

27647. Sept. 7.—Removing speed restriction of 8 miles an hour imposed by order 27283, June 5, on Canadian Northern Quebec Ry. from point in St. Theophilus Parish to point in St. Flore Parish, 3516.3 ft.

27648. Sept. 9.—Authorizing J. B. Carr, Huntingdon, Que., under G.T.R. supervision, to extend drain under railway embankment to line ditch on south side of track, as shown on plan.

27649. Sept. 7.—Authorizing Canadian Northern Ry. to build across road allowance between Secs. 11 and 12, Tp. 27, Range 1, west 3rd meridian, Sask.

27650. Sept. 8.—Authorizing C.P.R. to build spur for Slobinsky Bros. & Sons, Winnipeg.

27651. Sept. 9.—Authorizing C.P.R. to extend spur for Gordon, Ironsides & Fares, Packers, Ltd., between Knox and Maude Sts., Winnipeg.

27652. Sept. 9.—Authorizing G.T.R. to build spur for City of Ottawa, Ont.

27653. Sept. 12.—Authorizing Canadian Northern Ontario Ry. to build temporary siding across Blackstone Road, Foley Tp., Ont.

27654. Sept. 11.—Authorizing Canadian Northern Ry. to extend siding across highway at Anerley, Sask.

27655. Sept. 10.—Authorizing C.P.R. to build spur for Laing Produce & Storage Co., Ltd., Brockville, Ont.

27656. Sept. 10.—Relieving Canadian Northern Ry. from erecting fences, gates and cattleguards on its Boston Bar Subdivision, between mileage 0.29 and 123.19, B.C.

27657. Sept. 12.—Authorizing Mount Royal Tunnel & Terminal Co. to cross under Portland Ave., Mount Royal, Que.

27658. Sept. 11.—Authorizing G.T.R. to build additional track across Wellington St., Exeter, Ont.

27659. Sept. 12.—Authorizing C.P.R. to divert road allowance at mileage 76.1, Broadview Subdivision, Sask.

27660. Sept. 12.—Approving revised location and diversion of Canadian Northern Quebec Ry. from mileage 60.5 from Joliette, southwesterly to Canadian Northern Ontario Ry. in Chatham Tp., Que., and authorizing it to make connection there.

27661. Sept. 12.—Authorizing C.P.R. to divert road allowance on south boundary of s. e. 14 Sec. 17, Tp. 11, Range 33, west principal meridian, Sask.

27662. Sept. 12.—Authorizing C.P.R. and Canadian Northern Ontario Ry. to use interlocking plant at Donlands, Ont.

27663. Sept. 11.—Authorizing Essex Terminal Ry. and Canada Southern Ry. to operate over crossing near Amherstburg, Ont.

27664. Sept. 12.—Ordering that Canadian Northern Ontario Ry. station at Cote Double, Que., be in accordance with C.P.R. no. 2 shelter plan 11-15-2A; and be completed by Nov. 1.

27665. Sept. 13.—Authorizing C.P.R. to build spur for City of Three Rivers, Que.

27666. Sept. 14.—Relieving C.P.R. from erecting fences, gates and cattleguards on Dominion Atlantic Ry. between Windsor and Uniaque, N.S., at certain points.

## Directors' Inspection of Canadian Pacific Railway.

The annual directors' inspection of C.P.R. lines from Montreal to the Pacific coast was commenced Sept. 8, when the President, Lord Shaughnessy, left Montreal in a special train, accompanied by Sir Herbert Holt, R. B. Angus, C. R. Hosmer and E. W. Beatty, directors. At Toronto the party was joined by two other directors, Sir Edmund Osler and W. D. Matthews, and by Dr. Allan Baine, and visited the new union station under construction; the new concrete viaducts on Leaside-North Toronto line, and other works. Port Arthur was reached Sept. 10, and a stop was made over night at Fort William, where Grant Hall, Vice President and General Manager, Western Lines, took over the charge of the party from A. D. MacTier, General Manager, Eastern Lines, who had accompanied it to that point. Winnipeg was reached on the evening of Sept. 11, where the party was joined by another director, Sir Augustus Nanton. After inspecting the company's various interests in that city, the special train resumed its journey westerly, Sept. 13, short stops being made at Brandon, Man., Moose Jaw, Sask., and Calgary, Alta., arriving at Vancouver, Sept. 15, and at Victoria by steamship Sept. 16. The return journey was started from Victoria, Sept. 18, and from Vancouver, Sept. 20. The special train travelled eastward via Calgary, Edmonton and Saskatoon. A two hour stop was made at Winnipeg, Montreal being reached on the evening of Sept. 25.

In accordance with the President's re-

quest, there were no receptions or public functions at any of the points visited. At various places short interviews were given on general subjects, very little being said about railway matters, and that of a particularly general character.

## Canadian Government Railways Construction, Betterments, Etc.

**Prince Edward Island Ry.**—The Premier of Prince Edward Island is reported to have said at Toronto, Sept. 10, that it is expected that by the end of this year a third rail will be laid between Charlottetown and Summerside and to the car ferry terminal at Borden, so as to permit the use of standard gauge rolling stock. When this is done, he said, nearly half the railway in the province will become an effective part of the Dominion Government Railways system, and when the rest of the line is similarly treated the present narrow gauge rolling stock will either be sold or scrapped.

A Charlottetown dispatch of Sept. 17 stated that the distributing of rails for laying a third track from Borden to Summerside, and from Emerald to Elliotts, had been completed, and that tracklaying was in progress.

**Halifax Ocean Terminals.**—A press report states that it is expected that the new temporary station at Halifax will be opened for passenger traffic early in November.

**Sydney Yards.**—We are officially advised that the yard extension being done at Sydney, N.S., consists of some filling by contractors working for the Dominion Iron & Steel Co., upon which the railway laid some additional storage tracks.

**Moncton Yards.**—We are officially advised that the improvements effected at the Moncton, N.B., yards, referred to in recent press reports, were ordinary maintenance work, and not in the way of extensions or new work.

**Moncton Yard Offices.**—Excavation for the new yard offices at Moncton, N.B., to replace those destroyed by fire in April, is reported to be in progress. The new building will be at the west end of the present rest house, and will contain accommodation for some other branches of the service which were not located in the old building.

**St. John, N.B.**—A press report states that a contract has been let to D. C. Clark for extensive repairs and renewals to the Intercolonial Ry. no. 9 shed on Long Wharf, St. John, N.B. The wharf itself is reported to have undergone extensive repairs during the summer. Among the other improvements reported to have been carried out at St. John during the summer are the repairing and renewal work on the Courtenay Bay branch, and the provision of additional trackage on the breakwater wharf. Other work is still in progress.

**South Devon.**—A press report states that some additional tracks are being laid between Fredericton and South Devon, and that a 2-stall locomotive house is being built at the latter place for consolidated locomotives, which are too heavy to cross the bridge there.

**Moffat-Campbellton Division.**—A line 2.7 miles long is being built from Moffat station on the Intercolonial Ry. to a junction with the International Ry. of New Brunswick, 7.4 miles from Campbellton, N.B. The contractor is R. B. Stewart, Perth, N.B. Work has been started and it is expected to have it completed this year, when traffic for the International

Ry. of New Brunswick will be run over the Intercolonial Ry. main line between Campbellton and Moffat, thence over the new line to the I. Ry. of N.B., thus permitting 7.4 miles of the latter railway to be abandoned and the track lifted. The I. Ry. of N.B. was built as a private enterprise, and was subsequently taken over by the Dominion Government as an Intercolonial branch. The present work is being done to co-ordinate the tracks of the two lines for the better working of traffic, in the same way as is being done at the St. Leonard end of the line with the National Transcontinental Ry., also a part of the Canadian Government Railway system. (Sept., pg. 394.)

## Railway Rolling Stock Orders and Deliveries.

The C.P.R. will probably order three 29 ft. vans at its Winnipeg shops.

Dominion Foundries & Steel, Ltd., has ordered 11 flat cars, 40 tons capacity, from National Steel Car Co.

Canadian Northern Railway has received 6 six-wheel switching locomotives from the Canadian Locomotive Co.

The Prince Edward Island Ry. has received 2 ten-wheel narrow gauge locomotives, from the Canadian Locomotive Co.

The Pacific Great Eastern Ry. has bought 30 stock cars, 60,000 lb. capacity, complete with M.C.B. equipment, from Gray & Son, Chicago, Ill.

The Toronto Commissioner of Works received tenders, Sept. 30, for the purchase from the city of 4 flat cars, 3 ft. gauge, 40,000 lb. capacity, weight approximately 17,200 lb.

The C.P.R. received the following additions to rolling stock from its Angus shops, Montreal, recently:—19 express refrigerator cars, 390 steel underframe box cars, and 1 decapod locomotive; also 4 vans from its Winnipeg shops.

Canadian Government Railways, since July 19, have authorized Canadian Car & Foundry Co. to repair approximately 500 cars of various designs. They are being distributed between the company's Montreal and Amherst, N.S., works.

The Grand Trunk Pacific Ry. has authorized the Canadian Car & Foundry Co. to repair 1,000 box cars, each of which will be refitted with economy reinforced ends. This work is being carried out at the company's Fort William plant.

## Grain Inspected at Western Points.

The following figures compiled by the Trade and Commerce Department's inspection branch, show the number of cars of grain inspected on railways at Winnipeg and other points in the Western Division, for August, and for 12 months ended Aug. 31, 1918 and 1917.

	Aug. 1918.	12 months Aug. 31, 1918.	12 months Aug. 31, 1917.
C.P.R. . . . .	499	91,827	131,594
C.N.R. . . . .	258	55,134	72,833
G.N.R. Duluth . . . .		714	3,519
G.T.P.R. . . . .	36	23,405	23,136
Totals . . . . .	783	171,080	231,082

A fast motor freight and express service has been inaugurated between Toronto and Hamilton. It is reported that two trips a day in each direction are being made and that seven trucks, each capable of hauling two trailers, are being used. Lighter cars are being used for the collection and delivery of the freight in Toronto and Hamilton.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alaska Ry.**—A Seward, Alaska, press dispatch stated recently that it was expected to connect up the Seward and Anchorage divisions of the United States Government line in Alaska, Sept. 16, thus completing the line from Tidewater to Seward. (Sept., pg. 390.)

**Canadian Pacific Ry.**—Two miles of new water mains are being laid at Pilot Butte, Sask., this season, J. Brodt being the contractor, and it is reported that an additional 4 miles will be laid next year.

In connection with the Johnson St. bridge at Victoria, the Premier of British Columbia and the mayor had an interview with Lord Shaughnessy, Sept. 17, at which the latter stated that the company would carry out the terms of the agreement referred to in the order in council of 1887, as it would have been carried out had a joint bridge been built at that time. The question at issue is the character of the bridge to be built, and the proportionate cost to be paid by the company and the city. (Sept., pg. 390.)

**Grand Trunk Pacific Ry.**—The Board of Railway Commissioners has approved of plans for an interchange track between the C.P.R. and the G.T.P.R. at Forrest, Man., upon the application of the latter company.

The ballasting and completing of the branch line from Talmage, on the Regina-International Boundary line, into Weyburn, Sask., which was put in hand in May, has been completed. Train service was put in operation over it Sept. 1. (Sept., pg. 390.)

**Kettle Valley Ry.**—A press report of Sept. 12, said construction on the branch line from Princeton, B.C., to Copper Mountain had reached such a stage that it was expected to have track laid on the first six miles by Nov. 1. The Canadian Copper Corporation's big concentrating plant is to be erected at this point on the branch, and it is reported that the site has been cleared. The branch is expected to be completed in its entirety early next summer. (July, pg. 285.)

**Hudson Bay Ry.**—It was reported in Ottawa, Sept. 17, that construction was being suspended. This applies more particularly to the approximately 90 miles of line from the Kettle Rapids of the Nelson River to Nelson, upon which track has yet to be laid. The difficulty of obtaining steel rails, and the fact that the terminal works at Nelson are incomplete are stated to be the causes of this suspension. Some work on the terminals will, however, it is said, be gone on with during the winter. It is stated that arrangements have been made for the Canadian Northern Ry. to provide a service over the completed portion of the H.B.R. from Pas to mileage 189, upon which a limited service has heretofore been given by the contractors.

**Michigan Central Rd.**—The St. Thomas, Ont., City Council, has authorized the company to build 12 portable houses for the use of laborers on the line. Heretofore old freight and passenger cars have been used for housing the men. (Sept., pg. 390.)

**Nakusp & Slocan Ry.**—It is reported that at a conference with the Premier of British Columbia, at Victoria, Sept. 17, Lord Shaughnessy, President C.P.R., intimated the company's willingness to hand over the railway to the province after the redemption of the outstanding bonds.

**The North Shore Ry.** is the title of the railway extending from Adamville Jet, on

the Intercolonial Ry., to the Beersville, N.B., coalfields, formerly operated by the Beersville Coal & Ry. Co. A new company with a reported capital of \$100,000, is getting the mining properties into order for operation, and expects shortly to have an output of over 100 tons a day. It is reported that J. D. Betts, of Joggins Mines, N.B., is to manage the company, and that the railway line will be overhauled and put in operation. The line has a total length of 14 miles and is in two sections, viz.: from Adamville to Imperial, 10 miles, and from Hogan Jet., 7 miles from Adamville, to Coalville, 4 miles. C. J. Burchill, K.C., Halifax, N.S., and J. T. Cumming, New Glasgow, N.S., on behalf of the new company, had an interview with the New Brunswick Government Sept. 6, with respect to the railway part of the undertaking, which was taken possession of by the government on the failure of the former owners. (Aug., 1914, pg. 372.)

**Pacific Great Eastern Ry.**—We are officially advised that the British Columbia Government has let the contract for completing a 42 mile extension of the line beyond the present track end near Clinton, B.C., to the Northern Construction Co., Vancouver. The work to be done consists of track laying for 42 miles, 6 miles of grading, putting in a few trestle bridges, and other work, all the other work having been done before the government took over the railway from Foley, Welch & Stewart.

According to press reports, the lowest tenderer was McKinnon, Cooper, Drabble & Co., Vancouver, at \$300,000; the next lowest Cotton & Co., Vancouver, at \$308,000, and the next Palmer Bros., Vancouver, at \$349,000; but for one reason or another no contract was arranged with either of them. These three bids were on the unit principle, while the remaining bids were on the cost-plus principle. An examination of these by A. F. Proctor, Chief Engineer, showed that the Northern Construction Co. estimate would work out at \$319,000, with 5½% commission, but no commission would be paid on any amount over \$319,000. The company is to furnish all the plant required, and will be allowed 25% upon all savings effected upon estimates. A. R. Mann, President Northern Construction Co., will be in charge of the work. It is not likely that any sub-contracts will be let.

The Premier of British Columbia is reported to have said in Vancouver, Sept. 12, that work had been started by the Northern Construction Co. on the line; that 90 men were then at work, and that it was expected to have steel laid on the 42 miles from Clinton by Dec. 31. (Sept., pg. 390.)

**The Quebec & Saguenay Ry.** is being operated to within a mile of Baie St. Paul, but it was expected that trains would be running right into the village by Sept. 30. Tracklaying and other work is being gone on with between Baie St. Paul and Murray Bay, 27 miles, and it is expected that this section of the line will be completed by Dec. 31. Tenders for the erection of 5 station buildings, 2 section houses, 1 water tank, 1 locomotive house and other minor buildings were called for a second time recently and are now under consideration. The first tenders received for these buildings were not satisfactory, hence the second call. O'Brien & Doheny, Quebec, are the general contractors. (Sept., pg. 390.)

**St. John & Quebec Ry.**—The Premier of New Brunswick is reported to have

said, Sept. 3, that the progress of construction on the extension from Gagetown to the C.P.R. near Westfield, during August, had been only fair, due to the extreme shortage of labor. Unless there was a decided increase in the number of men on the work immediately, there was little prospect of the extension being completed this year.

T. Cozzolino, representing the Nova Scotia Construction Co., general contractors, is reported to have said all the rails for the extension are on hand and that progress is being made with the work.

Another report states that Kennedy & McDonald, who are sub-contractors for the Westfield end of the line, have their work well forward and hope to complete it by Dec. 1. The Bedford Construction Co., sub-contractors for the Gagetown southerly section, have made some progress, but cannot get sufficient men. A press report states that this company has applied to the Dominion Government to obtain permission to use interned alien enemies from the Amherst, N.S., camp on the work. (Sept., pg. 391.)

**Toronto, Hamilton & Buffalo Ry.**—A fire at the shops at Aberdeen Ave., Hamilton, Aug. 27, is reported to have caused \$10,000 damage. The boiler room, air-compressor room and store room, all of frame construction, were destroyed, the machine shop only being saved.

The new freight yards at Bridgeburg, Ont., laid out at a reported cost of \$100,000, were put into operation Sept. 2. (Aug., pg. 337.)

**Railway Taxation in Montreal.**—After a lengthened argument, Justice Duclou on Sept. 19 reserved judgment in the appeal of the Canadian Pacific, Grand Trunk and Canadian Northern Railways against a judgment of the recorder's for the levy of a special tax upon their rails in the city. The city claims that it has a right under subsection 2, of article 361 of the city charter to levy this tax, which provides unmovable property subject to taxation should comprise: "rails and other constructions and apparatus of every nature used for traction purposes and constructed or placed on, over, or under property, streets, highways or elsewhere within the limits of the city." The companies contend that this is a double taxation, while the city holds that the land is one immovable and the rails another.

**Appeal Court for Labor Disputes.**—The Dominion Government has appointed Justice McLennan of the Quebec Superior Court, Montreal, as chairman of the permanent court of appeal in labor disputes. The other members of the court are:—S. R. Parsons, Toronto, and G. H. Duggan, Montreal, representing the Canadian Manufacturers' Association, and G. Franceq and J. Bruce, representing the Trades and Labor Congress. The court will investigate the findings of boards of conciliation under the Labor Disputes Act, when they are unsatisfactory to either party, and its ruling will be supposed to be final.

**Railway Lands Patented.**—Letters patent were issued during August for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary & Edmonton Ry.....	480.00
Canadian Northern Ry.....	7,040.00
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.....	1,275.50
Total .....	8,795.50

## Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

**Canadian Railway Troops.**—General orders have been issued giving authority for the organization as a unit of the Canadian Expeditionary Force, part of the active militia, of the Corps of Canadian Railway Troops, and such unit is placed on active service from the date of its organization, June 5, 1918. The estab-

lishment, since when he has seen considerable service in France, has been given an Imperial commission in the Seaforth Highlanders.

**Lieut. H. N. Darling**, Toronto, Canadian Railway Troops, has been awarded the Military Cross. The pipe line supplying the water tanks from which the locomotives were filled was broken by shell fire. He returned with a noncommissioned officer and several men, under very heavy shell fire, and repaired the pipe line, thus enabling the locomotives to get away before the enemy's arrival. Throughout subsequent operations he displayed the greatest coolness and courage, and set a splendid example to all ranks.

**Lieut.-Col. J. S. Dennis**, Chief Commissioner of Colonization and Development,

Cross. On the leading tractor of a train, comprising two other tractors and 17 empty cars, becoming derailed, and thus preventing the salvage of the rest of the train, he immediately organized a party and proceeded to the point of derailment through a very heavy gas barrage, but owing to lack of appliances he could not re-rail the tractor. Having, however, cut the track on each side of the tractor and made a loop round it, he was able to get the rest of the train to proceed, although later its passage was again obstructed by a wrecked train, the damaged cars of which were cleared away successfully. By his ingenuity and gallant conduct he undoubtedly saved the tractors and the cars.

**Capt. J. G. McCaul**, who was awarded the Military Cross recently, was formerly in Canadian Northern Ry. service at Edmonton, Alta.

**Sergt. A. E. Moore**, who, prior to enlistment in the Canadian Expeditionary Force, was engaged in the Canadian Northern Ry. shops at Winnipeg, is reported to have been wounded in action for the second time.

**Lieut. C. E. Peers**, reported killed in action recently, was formerly Assistant Engineer, Sault Ste. Marie Canal. He left Canada on overseas service in 1916.

**Lieut.-Col. S. L. Penhorwood**, of the Forestry Service, was a guest of the King and Queen at Windsor, Eng., Sept. 22. He was formerly Manager, New Ontario Dock Co., Sault Ste. Marie, Ont., and prior to the war, was officer commanding the 51st Sault Ste. Marie Rifles. After the outbreak of war, he was selected to organize the Northern Battalion from the Algoma, Nipissing and Timiskaming Districts.

**Lieut. E. V. Power**, reported killed in

A Canadian light railway train passing through camouflage near Loos. From Canadian official photograph. Copyright reserved.

lishment in Canada of the depot, which was heretofore known as the Railway Construction Depot, Military District No. 2, and which was originally organized as a forestry depot, will be as laid down for a depot battalion with a strength of a headquarters and four companies. Authority has been granted for the disbandment of the Canadian Railway Construction Corps, created Mar. 5, 1915, and organized July 1, 1915.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to the last report had contributed \$90,519.58 to the Canadian Red Cross and Canadian Patriotic Funds.

### PERSONAL NOTES.

**Lieut. R. J. Backhus**, 29th Vancouver Battalion, who has been reported killed in action, was formerly assistant to Freight Agent, Grand Trunk Pacific Ry. Victoria, B.C., and afterwards purser on the G.T.P. Coast Steamship Co.'s s.s. Prince Rupert.

**Capt. S. M. Bosworth**, mentioned in dispatches recently, is son of G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, Ltd., Montreal.

**Lieut. J. Boyd**, Montreal, Canadian Overseas Railway Construction Corps, has been awarded the Military Cross for conspicuous gallantry and devotion to duty, in maintaining track until all guns and rolling stock had been removed. Under heavy fire, and being cut off, he took his party across country and back to his company. Later, when in charge of a demolition party, he destroyed all structures and track, sometimes when the enemy was close on him. He was wounded, but completed his duties before reporting for medical attention.

**Private J. R. Bryant**, who was reported recently as wounded in action, was formerly in the Stores Department, Canadian Northern Ry., Saskatoon, Sask.

**W. J. Christie**, formerly Travelling Auditor, Grand Trunk Pacific Ry., Edmonton, Alta., who went overseas as a sergeant in the 202nd (Sportsmen's) Batta-

C.P.R., Montreal, who is announced to have been made a Companion of the Order of St. Michael and St. George, in connection with war mission work, which he carried out in the western states recently, is also announced to have been specially employed and attached to the staff of the Canadian Expeditionary Force in Siberia.

The Canadian Minister of Militia, Major General Mewburn, addressing a Canadian tramway corps near the western front. From Canadian official photograph. Copyright reserved.

**Lieut. C. W. W. Field**, who joined the U.S. Army in May, 1917, and who has been killed in action, was formerly City Passenger Agent, G.T.R., and Central Vermont Ry., Boston, Mass.

**Lieut. J. A. Foote**, of the Canadian Railway Troops has been awarded the Military Cross. The area where he was working was subjected to intense shell fire, and the line was broken in six places. He repeatedly reorganized his working parties, who had suffered casualties, and by his example and encouragement kept his men at work under most difficult conditions. By his efforts the line was kept open and the supply of ammunition was ensured.

**Lieut. M. Helyer**, Canadian Railway Troops, has been awarded the Military

action, was a son of N. J. Power, formerly General Auditor, G.T.R., Montreal, and now residing in California.

**Lieut. G. I. Price**, St. John, N.B., Canadian Railway Construction Corps, has been awarded the Military Cross. While acting as liaison officer with four pieces of railway mounted artillery, through his untiring efforts and skill all pieces were removed without loss or damage. The track was continually being broken by shell fire, and was repaired as required.

**Lieut. W. J. Riley**, Victoria, B.C., Canadian Railway Troops, who had previously been given the military medal, has been awarded the Military Cross, for conspicuous gallantry and devotion to duty in attempting to save two 12 in. railway howitzers, and in saving a locomotive which

would have fallen into enemy hands. A number of breaks had to be repaired, and at one part of the journey the locomotive had to be taken over an 8 in. break in the rails. In spite of heavy machine gun and rifle fire, he was successful and the locomotive was then used to haul a trainload of material. He showed great courage under very trying conditions.

**Lieut. Edward Slattery**, holder of the distinguished conduct medal, and the military medal with two bars, who was killed in action, Aug. 30, was, before enlisting, engaged as a car cleaner in the C.P.R. Glen Yard, Montreal. He enlisted as a private, and received the military medal for bravery in July, 1917, two bars being added for his work during the Vimy Ridge encounters. The distinguished conduct medal was awarded in Aug., 1917, and he was promoted to lieutenant on the field, in April, 1918.

**Lieut. E. G. Stevenson**, St. John, N.B., Canadian Railway Troops, has been awarded the Military Cross for conspicuous gallantry and devotion to duty in an attempt to save two 12 in. railway howitzers. The track behind the guns had been broken and the breaks had to be repaired. This was accomplished under heavy shell fire, and the guns pushed for half a mile by hand. It was only when the shelling and machine gun fire became intense, and the infantry had to take up another position behind the guns, that the attempt had to be abandoned.

**Brigadier-General J. W. Stewart**, of Foley, Welch & Stewart, railway contractors, who has been associated throughout the war with the work of the Canadian Railway Troops, is mentioned as likely to be appointed Director of the whole transportation system in France and Flanders. In speaking of him recently, the Dominion Minister of Militia paid special tribute to the work for which he is responsible.

**Private J. H. Summerbell**, reported recently as wounded in action, was formerly in the Engineering Department, Canadian Northern Ry., Toronto.

**Lieut. C. W. Switzer**, Montreal, Canadian Overseas Railway Construction Corps, seconded to Railway Construction Engineers, has been awarded the Military Cross. He received an order for the demolition of structures with a time limit, and so was unable to communicate with the railway company. On his own initiative, he organized the demolitions and handled quantities of high explosives under heavy shell fire.

**Corporal Leslie Taylor**, formerly in the Canadian Northern Ry. shops at Winnipeg, has been awarded the Military Medal. He joined the Canadian Expeditionary Force in Aug., 1914.

**C. W. Wilson**, Locomotive Foreman, Canadian Government Railways, Hearst, Ont., has been granted leave of absence for military service.

**Phillip Hamilton Wilson**, of the 2nd Canadian Mounted Rifles, formerly of the 198th Battalion, who was killed in action in France, Aug. 10, was the youngest son of the late Jas. Wilson, at one time General Superintendent, C.P.R., Toronto.

A press report states that trans-Atlantic steamship companies are being asked to accept bookings for passage after the war.

The G.T.R. is reported to have handled 8,371,521 bush. of grain from Great Lakes ports to Montreal for export during August, which, it is claimed, exceeds by about 500,000 bush. the previous best record by the company.

## Canadian Northern Railway Construction, Betterments, Etc.

**St. Charles River Bridge.**—A new bridge across the St. Charles River, at Quebec, is under construction. The present bridge, known as the St. Anne bridge, was built for the Quebec & Lake St. John Ry., and was subsequently used in addition by the Canadian Northern Ry. and the Quebec Ry., Light & Power Co. It was condemned as insufficient for the traffic requirements about nine years ago, but the proposal to rebuild was left in abeyance until the completion of certain river improvement works. However, the condition of the bridge became such that the work of erecting a new bridge became an immediate necessity. The piers for the new bridge, which will be located immediately to the west of the present bridge, are being put in as part of the river improvement works being carried out for the Dominion Government by Quinlan & Robertson. They provide for a superstructure to carry a double track railway, electric railway tracks, and highway for general traffic, but only a single track will be laid until the river improvement works are completed. The contract for the superstructure is reported to have been let to the Dominion Bridge Co. The piers are being erected under the supervision of E. A. Hoare.

**Montreal Tunnel Opening.**—The tunnel under Mount Royal, which gives the C.N. R. an entrance into the center of Montreal, was officially opened for traffic, Sept. 21. The first train arriving in Montreal by the tunnel was a special one from Ottawa, carrying G. A. Mountain, Chief Engineer, Board of Railway Commissioners, and several C.N.R. officials, and travelling over the direct line between the two cities. The distance between Montreal and Ottawa by the new route is 112 miles, instead of 160 miles by the old line via Joliette. The new line follows the Ottawa River from Hawkesbury, crosses the Back River to Montreal Island, and reaches the center of the city via the tunnel. The divisional yard is at Cartierville, and between there and the Montreal terminal electric locomotives will be used. A through service between Montreal and Toronto via Ottawa will be started at an early date.

**Connecting Link Near Grenville, Que.**—Tenders were received to Sept. 10 for the construction of about a mile of railway to connect the Canadian Northern Ontario Ry. and the Canadian Northern Quebec Ry. at Cushing in Argenteuil county, Que., but we have been officially advised that owing to the lateness of the season and other contingencies it has been decided to defer the work for the present and no contract has been let.

**Western District.**—In connection with the plans for the extension of the Luck Lake Branch, upon which the Dominion Government authorized the company to lay 14 miles of track this year, a deputation from Rosetown, Sask., and vicinity waited upon the Dominion Government at Ottawa recently to press for the laying of a greater mileage.

The Board of Railway Commissioners has directed the company to build an additional 40 ft. to its freight sheds, and to provide adequate waiting room accommodation at North Battleford, Sask.

**Vancouver Island Lines.**—The Premier of British Columbia is reported to have said in Vancouver Sept. 12, that rails were being transferred from Port Mann, to Victoria, and that they were being laid on the line from Victoria towards the Nitinat River. (Sept., pg. 385.)

## Railway Finance, Meetings, Etc.

**Burrard Inlet Tunnel & Bridge Co.**—At the annual meeting of shareholders, who are, with a few exceptions, representatives of city and other municipal councils in the vicinity of Vancouver, on Sept. 11, the President—Reeve Bridgman of North Vancouver City—Reported that there was no change in the company's affairs since the last annual meeting, except that the Dominion Parliament had extended its charter privileges until May, 1920. Nothing in the way of construction was proposed to be done, and all the directors proposed to do was to keep the charter clear until conditions became normal. The shareholders are:—City of Vancouver, 2,000 shares; City of North Vancouver, 2,000 shares; North Vancouver district, 3,375 shares; Carter Cotton, 20 shares; Loutet, 20 shares; McNaught, 20 shares; and McLean, 20 shares. The directors and officers were re-elected, as follows:—President, E. H. Bridgman; Vice President, G. W. Vance; other directors:—Messrs. Loutet, McBain, MacLurg, Woodside, and Carter-Cotton; Secretary, R. F. Archibald.

**Grand Trunk Ry.**—An issue of \$3,000,000 three year notes at 6%, at 99, partly to replace \$2,000,000 5% notes due shortly, has been authorized in England.

**Guelph Junction Ry.**—The City of Guelph, Ont., has received recently \$17,000 as a three months dividend on its stock in the G.J.R., against \$10,600 for the corresponding period of 1916-17. The dividends received for the first nine months of this year aggregate \$40,375.

**New York Central Lines.**—There have been deposited with the Secretary of State at Ottawa, copies of a supplemental agreement between the Guaranty Trust Co. of New York, the New York Central Rd., the Michigan Central Rd., and the Cleveland, Cincinnati & St. Louis Rd., under the New York Lines Equipment Trust for 1907.

**Timiskaming & Northern Ontario Ry.**—Passenger receipts for July, \$59,578.42; freight receipts, \$150,457.38; total receipts \$210,035.80, against \$56,134.33 passenger receipts; \$110,956.45 freight receipts; \$167,090.78 total receipts, for July, 1917.

**White Pass & Yukon Ry.**—A special meeting of debenture holders and shareholders was held in London, Eng., Aug. 2, for the consideration of reorganization proposals, as outlined in our last issue. The meeting was called under an order of the court, and votes of the various interests were taken for submission to the court, the result of which will be announced later.

**Grand Trunk Ry. Acquisition.**—The following statement was issued from the G.T.R.'s London, Eng., office Sept. 5:—"Reports that shareholders and directors of the G.T.R. in recent negotiations in London insisted that the only basis upon which they would sell their property to the Dominion Government was for cash, are declared here on highest authority to be absolutely untrue. It is stated that there was no suggestion made by either side of a cash settlement in payment for taking over the system, the only terms discussed being those regarding a fixed annuity to be paid to owners of the property."

Officials of the C.P.R. and the Canadian Government Railways met in St. John, N.B., Sept. 21, to discuss freight and passenger rates in the maritime provinces.

## The Canadian Railway War Board's Work.

**Abbreviations for Cars:**—For the sake of uniformity in compilation of interchange and other car reports, it is directed that Canadian lines adopt the following abbreviations:—

- "A"—Automobile cars.
- "B"—Box cars.
- "C"—Coal gondola cars.
- "H"—Hopper cars.
- "CK"—Coke cars.
- "F"—Flat cars.
- "LP"—Live poultry cars.
- "MW"—Ballast cars.
- "R"—Refrigerator cars.
- "SD"—Single deck stock cars.
- "PD"—Double deck stock cars.
- "PH"—Palace horse cars.
- "T"—Tank cars.

**Commodities liable to damage cars.**—One of the railways has issued the following circular:—"When box cars are necessary for shipments of freight, either in carload or less than carload quantities, which is liable to damage sides, ends or floors of cars, only old cars must be loaded, and when system cars are used, only those having a carrying capacity of 30 tons or less are to be so loaded. This includes such freight as: Acids of all kinds, asphalt, empty oil barrels, empty carboys, fertilizer, bulk or packages, gasoline, glue stock, grease, hides, ice, lime, bulk or packages, marget waste, molasses, paints, petroleum and products, phosphates, syrups, tallow, tankage, turpentine, kerosene and other oils, or any other commodity liable to leak or that will taint the car and render it unfit for movement of foodstuffs. System box cars exceeding 30 tons capacity and system automobile or produce cars, must not, under any circumstances, be used for such freight."

It is suggested that all member lines might with advantage issue specific instructions somewhat similar to the foregoing.

**General Embargoes.**—In issuing other than general embargoes, it is desired that the following exemptions be made in the order of priority shown:—1. Live stock and perishables. 2. Fuel, including coal, coke, charcoal, cordwood, slabs, edgings. 3. Shipments consigned to or for account of Imperial Munitions Board and Director of Overseas Transport, and to officers of United States Government departments. 4. Food for human consumption, including grain, grain products, sugar, salt, canned goods. 5. Food for animals and poultry. 6. Railway material and supplies (other than coal or coke when consigned to an officer of the railway at a station of the railway. 7. Shipments consigned to manufacturers of locomotives and cars. 8. Supplies for coal mines. 9. Oils. 10. Tank cars, loaded and empty. 11. Empty gas cylinders.

**Obligation of Supplying Rolling Stock.** Canadian railways have been asked by the Board to be governed by the following regulations issued by the United States Railroad Administration's car service section:

1. (a) When cars are to be loaded to destinations within the same switching limits in which the shipment originates, the obligation of supplying equipment ordered rests with the road upon which the car is to be loaded.

(b) When cars are to be loaded on a switching line to destinations beyond the switching limits, primary obligation for equipment ordered rests with the carrier road which is to receive the loaded car for road haul, subject to paragraphs 2 and 3.

2. A road haul line loading cars in switching service destined to points be-

yond the switching limits on another carrier road shall furnish the equipment from such supply as may be available within such switching limits and such carrier roads will make necessary equalization locally within weekly periods.

3. A terminal switching line loading cars in switching service destined to points beyond the switching limits on a carrier road shall furnish the equipment from such supply as may be available on its rails and when equipment required is not available, will call upon the carrier road to furnish necessary cars under paragraph (b).

4. The use of equipment as above is subject to car service rules, and exceptions may be made only upon authority of the car service section or the regional director having jurisdiction.

5. Shippers will be required to place order for equipment desired with proper representatives of the road on which cars are to be loaded.

**Shipments to Consignees.**—From time to time embargoes are issued by railways to the effect that "at request of consignee" shipments will not be accepted when billed to such consignee. For obvious reasons it is inadvisable that an embargo be placed for the reason stated. The issuance of an embargo in this manner conveys the impression that the railway is responsible for regulating the receipts of the consignee, and the railway might be involved in difficulty due to non-fulfillment of contracts entered into by outside parties.

**Transportation of Mails.**—As, on account of the increases in the costs of transportation, it is apparent that the rate of compensation allowed railways for the carriage of mails is inadequate, it is intended to make application to the Dominion Government at an early date for the establishment of mail carrying rates which will fully compensate the railways for the service given. In order to permit of necessary action being taken, member companies have been asked to furnish statements showing the present compensation received, the cost of the service performed, and the increase in cost since the establishment of the present rates, and also to recommend what increases in rates should be obtained.

### Canadian Railway Board of Adjustment No. 1.

Case 1, heard Sept. 10. Brotherhood of Railroad Trainmen and Toronto, Hamilton & Buffalo Ry. Claim for reinstatement, pay for time lost, of brakeman Earl Stewart, discharged on account of accident involving rear end collision.

Joint statement of fact as to controversy existing between T. H. & B. Ry. and the Brotherhood of Railroad Trainmen, submitted to Canadian Railway Board of Adjustment No. 1. "On January 29, 1918, a rear end collision occurred on the T. H. & B. Ry. about 3½ miles east of Hamilton, at the Albion bridge. On the date in question extra west locomotive 53, left Stoney Creek shortly after 7 p.m., and about the Albion bridge was stopped on account of light locomotive 16, having stopped about two locomotive lengths inside of automatic block signal 331, which was standing at 'danger' on arrival of extra 53. Rear brakeman Earl Stewart left the caboose of extra 53, which was standing on the bridge, to flag, but only got back about 700 ft. before extra west locomotive 70, showed up around curve and, passing him, struck rear end of ex-

tra 53 standing on the Albion bridge. Conductor Darche of extra 53 was killed in the collision, and another employee was injured, while one other employee riding in the caboose got out without injury. Brakeman Stewart was, on Feb. 9, 1918, 'discharged for failure to comply with flagging rule, Jan. 29, 1918.'

"The contention of the organization is: That flagman Stewart left the caboose of extra 53 as promptly as possible after stopping; that he got out as far as possible, with the time at his disposal, before extra 70 showed up around the curve, and that, for that reason, it was improper to hold him responsible for the accident.

"The contention of the company is: That flagman Stewart did not get back the proper distance required by rules to flag extra 70, and that he did not get back as far as he could have gone with the time at his disposal after extra 53 stopped. He was discharged for reasons above quoted.

"F. F. Backus, General Manager, T. H. & B. Ry.; W. J. Goodfellow, General Chairman, B. of R. T.—T. H. & B. Ry."

After analyzing the foregoing statements of fact and hearing additional evidence submitted by each party to the controversy, the board considered the following questions:—

1. Did Stewart observe T. H. & B. R. flagging rules? Answer, yes.

2. Should Stewart be paid according to schedule for all time lost? Answer, yes.

The unanimous opinion of the entire board is, and they take this opportunity of impressing on all concerned, that flagging rules must be rigidly observed to prevent accident resulting in damage to property to injury to person, and that everything possible must be done to afford full protection to trains.—U. E. Gillen, Chairman; S. N. Berry, Vice Chairman.

**Contagious or Infectious Diseases on Trains.**—The Board of Railway Commissioners has issued the following circular: "Railway companies are required to issue instructions to conductors of trains carrying passengers, to report, immediately, to the proper officer, any case, or cases, that they know of or have reason to suspect, of a passenger, or passengers, suffering from contagious or infectious diseases, having travelled in any of the cars in their trains; and, furthermore, instruct the official designated to have such car, or cars, removed from service and thoroughly disinfected in accordance with clause 5 of general order 35, before permitting the same to go into service again."

**The Metric System in Great Britain.**—A report presented to the Imperial Parliament recently, by the committee appointed to make suggestions as to the commercial and industrial policy to be followed after the war, contains certain conclusions relative to the adoption of the metric system in Great Britain. The committee states that having given the subject very full consideration, it is unable to recommend the compulsory adoption of the system, expresses itself as not being convinced that it is better than the present British system, and as satisfied that the practical objections are such as to outweigh any advantages claimed for it.

The Grand Trunk Pacific Ry. inaugurated a direct service between Regina and Weyburn, Sask., Sept. 1, over the Regina-Northgate line as far as Talmage, then over the recently completed branch into Weyburn. The service is tri-weekly, each way on Tuesdays, Thursdays and Saturdays.

# The Canadian Northern Railway's Reorganization, Etc.

The principal event of the past month in Canadian railway circles has been the final steps in the transfer of the C.N.R. ownership to the Dominion Government, the retirement of the President and Vice President, Sir Wm. Mackenzie and Sir Donald Mann, and most of the other directors, the election of new directors and the election as President of D. B. Hanna, heretofore Third Vice President.

## Legislation, Agreement and Arbitration.

In 1913 the Dominion Parliament passed an act to grant subsidies towards the construction of lines as follows: Canadian Northern Ontario Ry., from Ottawa to Toronto, not exceeding 250 miles, at \$6,400 a mile; Canadian Northern Ontario Ry., from Ottawa to Port Arthur, not exceeding 910 miles, \$12,000 a mile; Canadian Northern Alberta Ry., from Edmonton to the boundary between Alberta and British Columbia, not exceeding 260 miles, \$12,000 a mile. It was provided that before any of the subsidies be paid, the C.N.R. Co. should transfer to the Finance Minister, in trust for the government, \$7,000,000 of common stock.

In 1914 the Dominion Parliament passed an act providing that the government might aid in the construction, completion, equipment and betterment of the C.N.R. system, by guaranteeing its bonds, etc., to an amount not exceeding \$45,000,000, the guaranteed securities to be secured by a trust deed of securities of the railway, express, telegraph, transfer and other companies comprising the C.N.R. system, and by the transfer to the Finance Minister, in trust for the government, of \$33,000,000 of C.N.R. common stock, making, with the \$7,000,000 previously transferred, a total of \$40,000,000. The act also provided that while any of the guaranteed securities were outstanding the government might appoint any person to be a director of any or all of the companies included in the C.N.R. system.

In 1917 the Dominion Parliament passed an act providing that it might acquire the remaining 600,000 shares of the C.N.R.'s capital stock, not then held by the Finance Minister in trust for the government, on terms to be set out in an agreement to be made between the government and the owners and pledgees of not less than five-sixths of that stock, and for a price to be determined by arbitration; that upon the making of the agreement, at least five-sixths of the shares be transferred to the Finance Minister in trust for the government, and that if any of the 600,000 shares be not transferred the Governor in council might declare them to be the government's property, and that they should be paid for pro rata with the shares transferred as above required. The government was authorized, on the transfer of the five-sixths of the shares referred to, to assist the C.N.R. in paying its indebtedness up to \$25,000,000.

On Oct. 1, 1917, five-sixths of the 600,000 shares, par value \$51,000,000, were transferred to the Finance Minister, making a total of 910,000 shares, par value \$91,000,000, vested in the government, and shortly afterwards the Finance Minister announced that the government had become the "sole proprietor" of the system.

The agreement entered into between the government, Mackenzie, Mann & Co., Ltd., and the Canadian Bank of Commerce, pledgees of a portion of the 600,000 shares of stock, under the act of 1917, provided that arbitrators should deter-

mine the value of the 600,000 shares as at Oct. 1, 1917, that should the value be determined as \$10,000,000 or more, the price to be paid therefor should be \$10,000,000, but if the value determined

within three months of its receipt of the award, subject to deduction for undisclosed C.N.R. liabilities, if any.

Under the agreement, the following arbitrators were appointed: Sir Wm. Meredith, Chief Justice of Ontario, representing the Dominion Government; Wallace Nesbitt, K.C., Toronto, representing Mackenzie, Mann & Co., and Canadian Bank of Commerce; and Mr. Justice R. E. Harris, of Halifax, selected by the two other arbitrators. The arbitration opened at Toronto, Feb. 4, 1918, and continued at intervals until May 25, when the arbitrators gave a unanimous award, declaring that the value of the 600,000 shares was \$10,800,000, each of the parties to pay its own costs of the arbitration.

Under the terms of the agreement, the payment under the award was to be made by Aug. 25, but it was delayed for some two weeks, owing to certain matters which had to be cleared up. On Sept. 11, it was announced in Ottawa that payment had been made for 510,000 shares by a cheque for \$8,500,000, payable jointly to Mackenzie, Mann & Co. and the Canadian Bank of Commerce, the balance of the \$10,000,000 being held for the acquirement of the 90,000 remaining shares outstanding. As the holders of these shares were not parties to the agreement respecting the five-sixths of the 600,000 shares, it is said that they will be paid for on the basis of the arbitrators' determination of \$10,800,000, viz, \$18 a share, making the total payments \$10,120,000.

## Canadian Northern Railway System Properties.

The companies amalgamated in 1914 as the C.N.R. system were as follows: Bay of Quinte Ry. Co., Brockville, Westport & North Western Ry. Co., Canadian Northern Ry. Co., Canadian Northern Pacific Ry. Co., Canadian Northern Alberta Ry. Co., Canadian Northern Western Ry. Co., Canadian Northern Saskatchewan Ry. Co., Canadian Northern Manitoba Ry. Co., Canadian Northern Ontario Ry. Co., Canadian Northern Quebec Ry. Co., Canadian Northern Express Co., Canadian Northern Transfer Co., Canadian Northern Telegraph Co., Canadian Northern Steamships, Ltd., Canadian Northern System Terminals, Ltd., Central Ontario Ry., Duluth, Winnipeg & Pacific Ry. Co., Halifax & Southwestern Ry. Co., Irondale, Bancroft & Ottawa Ry. Co., Lake Superior Terminals Co., Minnesota & Ontario Bridge Co., Minnesota & Manitoba Rd. Co., Marmora Ry. & Mining Co., Mount Royal Tunnel & Terminal Co., Niagara, St. Catharines & Toronto Ry. Co., Northern Consolidated Holding Co., Quebec & Lake St. John Ry. Co., Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co., St. Boniface Western Land Co., Winnipeg Land Co.

The C.N.R. Co. holds a controlling interest in the Great Northwestern Telegraph Co., which is included in the transfer to the government. No action has apparently been taken in regard to the Chatham, Wallaceburg & Lake Erie Ry., Toronto Suburban Ry., and the Toronto & Eastern Ry., on the latter of which only a little construction has been done. All three of these companies are controlled by Sir Wm. Mackenzie and associates. It is possible that some, if not all of them, may be transferred to the government.

## Canadian Northern Railway Shareholders.

The acting Minister of Finance, Hon. A. K. Maclean, stated in the House of

David Blythe Hanna,  
President, Canadian Northern Railway.

Alfred J. Mitchell,  
Vice President, Finance and Accounting, Canadian Northern Railway.

should be less than \$10,000,000, the value so determined was to be the price paid, in other words, no more than \$10,000,000 was to be paid, regardless of what the arbitrators might decide as to the price; payment to be made by the government

Commons, on May 14, 1918, that the 1,000,000 shares of \$100 each of the C.N.R. Co.'s stock were then held as follows:

Minister of Finance and Receiver General of Canada in trust for His Majesty	910,000
Lazard Brothers & Co.	22,500
Mackenzie, Mann & Co., Ltd., transferred in blank and deposited with Province of British Columbia, Order deposited with Finance Minister	16,000
Z. A. Lash, K.C.	13,020
Mackenzie, Mann & Co., in trust	12,660
Sir John Aird and H. V. F. Jones, in trust	10,000
British Empire Trust Co. Ltd.	3,240
D. B. Hanna	2,600
R. M. Horne-Payne	2,520
Bank of Scotland	2,000
Lewis Lukes	2,000
D. C. Rea and E. B. McNery, in trust	1,000
W. H. Moore	1,000
A. J. Mitchell	1,000
Sir William Mackenzie	100
Sir Donald Mann	100
R. J. Mackenzie	100
E. R. Wood	100
W. J. Christie	20
W. K. George	20
G. A. Bell	20
Total	1,000,000

The Minister added that the last three named were the government directors, who had shares allotted to them for qualification purposes which they held in trust for the Government.

#### The Prime Minister's Declaration of Railway Policy.

Sir Robert Borden, in speaking at the Toronto Exhibition directors' luncheon on Sept. 9, said:—"Questions of great moment demand and are now receiving the attention of the government. With one exception the largest railway proprietor in Canada is the Canadian people; and the day may come when there will be no exception. The acquisition of the Canadian Northern Ry. system was brought about by conditions arising out of the war, and, in my judgment, it was the wisest solution of existing difficulties. The system comprises about 10,000 miles of railway, of which more than 9,700 miles are in actual operation; and, including the \$10,000,000 to be paid for the capital stock, the total cost to the country will be between \$44,000 and \$45,000 a mile. The greater portion of the line runs through a country which must develop rapidly in the early future. For this reason its future prospects are more favorable than those of the Intercolonial or the National Transcontinental. But if we take into account capitalization, the comparison is still more favorable to the recently acquired system. The government system of railways, comprising the Intercolonial, the Prince Edward Island and other small railways in the Maritime Provinces, embraces a total of 1,941 miles, hitherto known as the Canadian Government Railways. It represents a capitalization of more than \$137,000,000, without including interest. That means a capitalization a mile of \$70,666. If, however, interest were included (as it has been included in the capitalization of the Canadian Northern system), the capitalization would exceed \$100,000 a mile. Comparison with the Grand Trunk Pacific is equally striking. It embraces a total of 1,748 miles. The total expenditure upon the road, equipment and rolling stock amounts to about \$180,000,000, or more than \$100,000 a mile. The National Transcontinental comprises 1,811 miles from Moncton to Winnipeg. The actual cash paid out for its construction, without including a dollar for interest, is nearly \$164,000,000 and if interest is added the amount exceeds \$200,000,000 for 1,811 miles. This represents a capitalization of \$92,000 a mile if interest is omitted, and over \$112,000, including interest.

"The country, therefore, has embarked upon a wide policy of state ownership under very favorable conditions. Difficult questions at once present themselves as to methods of operation. If the policy of State ownership is to be successful, certain conditions are essential, and the people must resolutely support the government in maintaining them. The methods by which the operation of the road is to be carried out must be as efficient as those of any private corporation. There must be no party political interference; that would be absolutely fatal to discipline, to efficiency and to success. On the other hand, there must remain with the people and parliament of the country a general control which is incident to and indeed inherent in ownership. The government's proposals will be made public almost immediately, and they will be based upon the considerations I have mentioned. The total mileage owned by Canada is very large, comprising nearly

R. C. Vaughan.  
Assistant to President, Canadian Northern Railway.

14,000 miles, and reaching from the Atlantic to the Pacific. All the lines included in this mileage should be operated as one system and under one management; this system should not be administered by a department of the government; it should be connected, as soon as practicable, with steamship lines on both Atlantic and Pacific; and last, but not least, its operation should be kept absolutely free from party political interference. For these reasons and for this purpose the board of the Canadian Northern system will be reconstituted in the immediate future."

#### C.N.R. Directorate and Officials.

The C.N.R. directors, at the time of the issue of the last annual report to June 30, 1916, in Nov., 1916, were: Sir Wm. Mackenzie, President; Sir Donald Mann, Vice President; D. B. Hanna, Third Vice President; Z. A. Lash, Senior Counsel; R. M. Horne-Payne, London, Eng.; R. J. Mackenzie, Winnipeg; Frederick Nicholls and E. R. Wood, Toronto, representing the private shareholders, and W. J. Christie, Winnipeg; W. K.

George, Toronto, and H. W. Richardson, Kingston, Ont., representing the government. Messrs. Nicholls and Richardson resigned from the Board on their appointment to the Senate, and Graham A. Bell, then Assistant to the Minister of Railways and Financial Comptroller, Railways Department, was appointed as one of the government directors.

On Sept. 6, 1918, Sir Wm. Mackenzie, Sir Donald Mann and all the other directors, except D. B. Hanna and G. A. Bell, the latter of whom had in the meantime been appointed acting Deputy Minister of Railways, retired; A. J. Mitchell, theretofore assistant to Vice President, C.N.R., and Comptroller, Mackenzie, Mann & Co., was elected a director, and on Sept. 18 it was announced that the following additional directors had been elected, of course, on the government's nomination:—Robt. Hobson, President, Steel Co. of Canada, Hamilton, Ont.; F. P. Jones, Vice President and General Manager, Canada Cement Co., Montreal; E. R. Wood, President, Dominion Securities Corporation, Toronto; R. T. Riley, President, Northern Trusts Co., Winnipeg; C. M. Hamilton, farmer, Weyburn, Sask. E. R. Wood, who had been a member of the board, resigned at the same time as Sir Wm. Mackenzie, Sir Donald Mann, and others, and was re-elected. D. B. Hanna was elected President, and A. J. Mitchell was appointed Vice President, in charge of finance and accounting.

The first meeting of the new directorate was held in Toronto Sept. 27, all the directors except E. R. Wood being present. After inspecting the new terminals at Leaside, they left that evening by special train for Ottawa and Montreal, to look over the terminals, etc., at those places, and inspect the line between Ottawa and Montreal, which will be opened for traffic shortly in connection with the line between Ottawa and Toronto, thus giving a through route between Montreal and Toronto. Until otherwise decided, the board will meet in Toronto each Friday.

In addition to the election of D. B. Hanna, as President, and the appointment of A. J. Mitchell as Vice President, Finance and Accounting, the only appointments that have been made are those of Senior Counsel, Assistant to the President, and Secretary. Z. A. Lash, K.C., who was a member of the old board, and also the company's Senior Counsel, but who resigned both positions when Sir Wm. Mackenzie, Sir Donald Mann and other directors retired recently, has been re-appointed as Senior Counsel. In this connection he has also retired from the board of Mackenzie, Mann & Co., so that there can be no conflict of interests. R. C. Vaughan, heretofore Assistant to the Third Vice President, has been appointed Assistant to the President, and R. P. Ormsby, heretofore Assistant Secretary, has been appointed Secretary, vice W. H. Moore, resigned. A number of other changes will doubtless be made, especially in the operating department, and it appears to be probable that one or more vice presidents, without seats on the board, will be appointed in charge of various departments. M. H. MacLeod, General Manager and Chief Engineer, Western Lines, Winnipeg, is mentioned as likely to be made Vice President of Operation at Toronto, in which case he would probably be succeeded at Winnipeg by A. E. Warren, now Assistant to the General Manager there, and who acted for several months recently as Chief Operating Officer for the Railways Department at Ottawa. Vice Presidents for the legal and traffic departments are also

spoken of, but the full organization may be delayed, pending the expected arrangements in connection with the Canadian Government Railways, which will probably be merged with the C.N.R. into one system, and also the possibility of the Grand Trunk Pacific, if not the Grand Trunk also, being taken in later on.

DAVID BLYTHE HANNA, President, was born at Thornliebank, Renfrewshire, Scotland, Dec. 20, 1858, and entered railway service there in 1874, since when he has been, to 1879, clerk and ticket agent, Glasgow, Barrhead & Kilmarnock Ry., at Kinnishead, Pollokshaws and Barrhead; 1879 to 1882, cashier, Stobeross station, Glasgow, Caledonian Ry.; 1882 to 1884, in Auditor's office, and Travelling Auditor, G.T.R., Montreal; 1884 to 1886, clerk, General Auditor's office, New York, West Shore & Buffalo Ry., New York; 1886 to 1892, Chief Accountant, Manitoba & North Western Ry., Winnipeg; 1892 to 1896, Treasurer, and from 1893, also Land Commissioner, same road; 1896 to Nov., 1902, General Superintendent, first of Lake Manitoba Ry. & Canal Co., and afterwards of Canadian Northern Ry., Winnipeg; Nov., 1902, to the date of his present appointment, Third Vice President, Canadian Northern Ry. He has been associated with the Canadian Northern Ry. since its inception, and has been officially connected with all its subsidiary railway companies, now comprising the system.

ALFRED J. MITCHELL, Vice President, was born at Toronto, Sept. 28, 1879, and entered transportation service July 18, 1899, since when he has been, to Jan., 1902, chief clerk, Mackenzie, Mann & Co.; Jan., 1902, to Jan., 1904, accountant, same company; Jan., 1904, to July, 1908, Assistant Comptroller, same company; July, 1908, to Sept., 1918, Comptroller, same company; July, 1912, to Sept., 1918, also Assistant to Vice President, Canadian Northern Ry., all at Toronto.

MAJOR G. A. BELL, C.M.G., director, is acting Deputy Minister of Railways and Canals. Biographical data and portrait were published in our August issue, pg. 339.

C. M. HAMILTON, director, is a farmer at Weyburn, Sask., and is specially interested in the transportation problems connected with that industry. He is President of the Union of Rural Municipalities.

ROBERT HOBSON, director, is a son of the late Joseph Hobson, formerly Chief Engineer, G.T.R., and was born at Berlin, Ont., Aug. 31, 1861. He was engaged in railway work for several years on the Great Western Ry. and G.T.R., and in 1876 was appointed Secretary-Treasurer of the Hamilton Blast Furnace Co., the first producers of pig iron in Ontario. This company has since developed into the Steel Co. of Canada, of which he is President. He is also associated with several financial and industrial concerns, including the Bank of Hamilton and the Canadian Locomotive Co., being a director of both of these.

F. P. JONES, director, was born at Brockville, Ont., Nov. 5, 1869, and educated there and at Kingston, Ont. He was for many years in the Nova Scotia Steel & Coal Co.'s service, becoming Sales Manager, and subsequently transferred to the Dominion Iron & Steel Co. in a similar capacity, eventually becoming Manager. He was later appointed Vice President and General Manager, Canada Cement Co. Since the outbreak of war, he has acted as Vice Chairman of the War Trade Board.

R. T. RILEY, director, was born in Yorkshire, Eng., July 1, 1851, and came to Canada in 1875, and for some years

was engaged in farming in Ontario. He removed to Manitoba in 1881, where he has since been associated with a number of industrial, insurance and financial concerns, including the Northern Trust Co., of which he is President. He was one of the organizers, and is a director of the Great West Life Assurance Co., director, Union Bank of Canada, and a manager of the Winnipeg Stock Exchange.

E. R. WOOD, director, was born at Peterborough, Ont., May 14, 1866, and was educated there. He commenced business life as a telegraph operator, and subsequently entered the office of the Central Canada Loan and Savings Co., of which he became Vice President and General Manager. He is also President, Dominion Securities Corporation; Vice President, National Trust Co.; Director, Crow's Nest Pass Coal Co., Canadian Bank of Commerce, Western Assurance Co., Canada Life Assurance Co., Sao Paulo Tramway, Light & Power Co., Mexican Light & Power Co., and other industrial and financial concerns.

R. C. VAUGHAN, Assistant to President, was born in Toronto, Dec. 1, 1883, and entered railway service Oct. 3, 1898, since when he has been, to Mar., 1902, office boy, clerk and stenographer, General Freight Agent's office, C.P.R., Toronto; July to Dec., 1902, in Freight Department, G.T.R., Toronto; Jan., 1903, to July 1, 1910, clerk, secretary to Third Vice President and General Manager, and chief clerk to Third Vice President, Canadian Northern Ry., Toronto; July 1, 1910, to date of present appointment, Assistant to Third Vice President.

#### Changes in Offices, Etc.

There appears to be little doubt that the C.N.R. head office will remain in Toronto, unless a change should be determined on if the C.N.R. and the Canadian Government Railways are merged, and the Grand Trunk Pacific and possibly the Grand Trunk also taken in. The Winnipeg Board of Trade has started a movement in favor of the removal of the headquarters to that city, but this is not likely to take place.

President D. B. Hanna is moving down one floor in the general office building, 1 Toronto St., to the room occupied heretofore by Sir Wm. Mackenzie, and his Assistant, R. C. Vaughan, and immediate staff, will be located in adjoining rooms. Sir Donald Mann's former office will be used as a board room.

Sir Wm. Mackenzie and Sir Donald Mann have moved into offices at 43 Victoria St., Toronto, and among their staff who have moved with them are: R. G. O. Thomson, heretofore Assistant Comptroller, and now Comptroller, Mackenzie, Mann & Co., Ltd.; F. C. Annesley and C. E. Buckley, private secretaries to Sir William and Sir Donald, respectively. The Canadian Land & Investment Co. will also have its offices at 43 Victoria St. Lewis Lukes, heretofore Assistant to President, C.N.R., who is connected with several of Sir Wm. Mackenzie's interests, has moved his office to 95 King St. East, Toronto.

Grand Trunk Ry.—A London, Eng., cable of Sept. 12 says the G.T.R. has issued £3,000,000 of 3-year 6% notes at 99, partly to replace an issue of £2,000,000 of 5% notes maturing shortly.

The Michigan Central Rd. is reported to have made an arrangement for the operation of certain of its freight trains over a section of the Toronto, Hamilton & Buffalo Ry., which necessitates the removal of a number of train crews from St. Thomas to Bridgeburg, Ont.

### Canadian Northern Railway Earnings, etc.

Gross earnings, working expenses, net earnings, increases and decreases compared with those of 1917, from July 1, 1918:

	Gross earnings.	Expenses.	Net earnings.	Increases.	Decreases.
July	\$3,739,400	\$3,462,700	\$276,700	\$628,200	
	\$3,739,400	\$3,462,700	\$276,700	\$628,200	
Incr.	.....	\$ 522,700	.....	.....	.....
Decr.	\$ 105,500	.....	\$628,200	.....	.....

Approximate earnings for August, \$3,933,300, against \$3,405,200 for August, 1917.

### Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross earnings.	Expenses.	Net earnings.	Increases.	Decreases.
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485	
Feb.	9,674,302	8,983,404	590,898	1,396,161	
Mar.	12,427,915	9,435,134	2,992,781	944,536

July	12,374,165	10,204,153	2,170,012	1,589,995	

	\$84,386,451	\$67,509,455	\$16,876,996	\$7,880,460	
Incr.	.....	\$ 7,532,274	.....	.....	.....
Decr.	\$ 348,186	.....	\$7,880,460	.....	.....

Approximate earnings for August, \$12,713,000, against \$12,414,537 for August, 1917.

### Grand Trunk Railway Earnings.

	Gross earnings.	Expenses.	Net earnings.	Increases or decreases.
Jan. to June	\$26,162,127	\$25,855,560	\$306,567	\$4,652,068
July	5,788,482	4,358,163	1,430,319	214,767

	\$31,950,609	\$30,213,723	\$1,736,886	\$44,37,301
Incr.	\$ 2,899,121	\$ 7,345,421	.....	.....
Decr.	.....	.....	\$4,437,301	.....

\*Decrease.

Approximate earnings for August, \$6,106,615, against \$4,784,269 for August, 1917.

### Grand Trunk Pacific Ry. Earnings.

Earnings for July, \$437,847, against \$489,980 for July, 1917; approximate earnings for three weeks ended Aug. 21, \$301,921, against \$362,783 for same period 1917.

### Dominion Transport Co's Organization.

The following changes have been made in the organization of the Dominion Transport Co.:—

G. R. Starke, heretofore Vice President and Managing Director, has been elected President and Managing Director. Office, Montreal.

J. A. Cantlie, Montreal, has been elected Vice President.

The other directors are Lieut.-Col. Michie and Hugh Mackay.

F. L. Miller is Secretary-Treasurer.

W. J. Langton, heretofore Superintendent, Toronto, has been appointed General Manager. Office, Montreal.

R. H. Walker, heretofore agent, Ottawa, Ont., has been appointed Superintendent, Toronto.

GEO. PRESTON has been appointed agent, Ottawa, Ont.

W. J. Langton, General Manager, was born at Toronto, entered the company's service about 30 years ago, and was Superintendent at Toronto for about 13 years. While in Toronto, he was associated with several local organizations, and is President of the Toronto Transportation Club.

The Canadian Ticket Agents' Association will hold its 32nd annual meeting and outing at Buffalo, N.Y., Oct. 9, 10 and 11.

## The Canadian Northern Railway's Presidency.

The Dominion Government has made a good start in the reorganization of the C.N.R. management. For some time it was feared that political considerations might prevail, and that a politician, without practical railway experience, would be appointed either chairman of the board or possibly as President. Such an appointment would have been a national calamity, and there was a good deal of public apprehension in regard to it. Sir Robert Borden allayed this somewhat, when he stated at the Toronto Exhibition directors' luncheon, on Sept. 9, that there must be no party political interference in the management of the road, and there was a general feeling of relief when it was announced on Sept. 18 that a board of business men had been appointed, and that D. B. Hanna had been elected President, thus ensuring a business administration of the second largest Canadian railway system.

It is eminently fitting that Mr. Hanna, who in 1896 was the first official of the little Lake Manitoba Ry. & Canal Co., the nucleus of the present C.N.R. system, should have been chosen as its chief executive. He is acquainted with every detail of the building up of the system, and has been responsible for years for its operation and for many other branches of its organization. Laboring under difficulties that many men would have found insurmountable, he has carried on the operation in a most economical way and has proved himself a most capable administrator. During the recent arbitration proceedings, he surprised even his most intimate friends by his thorough knowledge of every phase of the company's operations—finance, construction and operation.

Mr. Hanna enjoys to an extraordinary degree the confidence and respect of the thousands of men on the C.N.R. pay rolls, and will undoubtedly receive an enthusiastic loyalty from them that no outsider could hope to secure. He is also very popular with other railway officials, and with the large number of the general public with whom he has come in contact, and we believe that now he has a free hand and can carry out his own ideas as to organization, etc., he will produce satisfactory results.

Of one thing the public need have no fear. Mr. Hanna will serve the new owners of the road—the people—as loyally and enthusiastically as he served its private owners, and no man could do more.

## Character Sketch of D. B. Hanna.

Following are extracts from an article published in the Toronto Globe in 1911:

You may call him, if you choose, prime minister to the dual monarchy that reigns over the Canadian Northern Ry. System. You may regard him as the foster mother of the score or more enterprises in which these potentates are engaged. You may speak of him as one of the big men of the country, wealthy, respected and influential, or you may point to him as the steady yet agile climber up the slippery rungs of the ladder of success. And yet in the end you will get back to describing him simply as the warm hearted, genial Scotchman, David Blythe Hanna, unspoiled and unchanged by all the honors that have fallen to his lot.

D. B. Hanna was Treasurer of the Manitoba & Northwestern Ry., with headquarters in Portage la Prairie, when William Mackenzie first ran across him. Mac-

kenzie was building the comparatively insignificant road from Gladstone to Dauphin, which was to form the nucleus of the Canadian Northern. He wanted a Superintendent, and a friend recommended Hanna, with the result that the brilliant promoter and the no less brilliant administrator joined hands.

The early days of the Canadian Northern, when Hanna was simply Superintendent of the little Lake Manitoba Ry. & Canal Company, form quite a contrast to the era that has since dawned. Those were the times when thirteen men and a boy were said to have been a sufficient force to operate the entire system. It was a period of vicissitude, when versatility was required, and faith and enthusiasm. Through it all D. B. Hanna plodded along, working overtime and inspiring courage in his subordinates.

His earlier career had all along been associated with railroading, in one form or another. Born at Thornliebank, Renfrewshire, Scotland, on December 20, 1858, he entered the service of the Glasgow, Barrhead & Kilmarnock Ry., at the age of 16, as ticket agent. In 1879 he transferred his services to the Caledonian Ry., becoming cashier at Stobeross station, in Glasgow. Emigrating in 1882, he first served two years in the Auditor's office of the Grand Trunk in Montreal, and then two years in the Auditor's office of the New York, West Shore & Buffalo Ry. in New York. In 1886 he joined the Manitoba & Northwestern Railway as Chief Accountant, becoming its Treasurer in 1892, and also Land Commissioner a year later. Just 15 years ago he became Superintendent of what was to become the Canadian Northern Ry., and in 1902 received the appointment of Third Vice-President.

In dealing with a man of Mr. Hanna's character, it is quite impossible to avoid the laudatory style of treatment. As one of his intimates remarked, "You can't tell much about Hanna, because he hasn't any faults." Among the several hundred men in the head offices of the C.N.R. in Toronto he is almost an object of worship. "There isn't a man among us who wouldn't die for him," was the somewhat extravagant assertion of one enthusiast, which may be taken as a fair indication of the esteem in which he is held. And this feeling extends outside to the other employees of the road. Even labor agitators, who might sometimes be expected to adopt a hostile attitude, have only good words to say for him.

When it comes to working, he does not believe in the eight-hour day—that is, for himself. It is no unusual thing for him to put in nine or ten hours at his desk, and throw in Saturday afternoons to boot, when, as he says, he can get a little house-cleaning done. On Sundays—well, of course, being a good Scotch Presbyterian, he doesn't indulge his hobby on the Sabbath. As for holidays, the frequent inspection trips which he must needs take, and almost annual voyages to England, provide sufficient variety, in his opinion, to make it possible to dispense with more formal vacations altogether. With so much of his time devoted to work, he is able to achieve wonders, getting through an immense amount of routine, and being interviewed by sometimes as many as fifty people a day.

The Third Vice-President of the C.N.R. is a big man, towering well over the 6-mark. Since he has seen fit on several occasions to joke about his appearance, it will not be derogatory to state that, like most men, he is not exactly in the Adonis class. One of his amusing reminiscences of his early life in Scotland has

to do with the time when he was a ticket-seller on the Glasgow & Kilmarnock Ry. An old lady presented herself before his wicket to buy a ticket to Glasgow.

"And sae ye're Janet Blair's boy?" said she.

"Aye," he assured her; "she's my mither."

"Weel, weel," mused the old lady, "a fine-lookin' woman is Janet Blair—but, lawks, ye're no a bit like her."

Looks, however, are only skin deep, and one need not be long in Mr. Hanna's company to find that his smile reveals a winsome personality, and his laugh a deep well of good spirits. Men who have travelled with him when the restraints of business have been relaxed find in him a prince of good fellows, an excellent story teller, and, what is just as much to the point, an appreciative listener. At the proper time, too, he can sing a Scotch song with almost as good effect as Harry Lauder, minus, of course, the theatrical trappings.

This vocal gift is, perhaps, the one unique feature about D. B. Hanna on which his biographer will be able to seize with particular satisfaction. It affords just that delightful little bit of contrast that is so essential to a good pen portrait. When the young Scotchman landed in Portage la Prairie his abilities in this direction were early recognized, and he was inveigled into taking charge of the choir in the Presbyterian church. His career as choirmaster is historic—it is inseparable from the story of his life. Whatever else may be forgotten, no one who attempts to outline his life omits this experience. Associated with it is the story of his discovery of Miss Edith Miller, the talented Canadian prima donna, who was a member of his choir, and who owes not a little of her success to his encouragement.

While Mr. Hanna no longer sings in a church choir, he has by no means lost his voice or his love for music. He is a regular attendant at Massey Hall concerts, and is Vice-President of the National Chorus. At the memorable banquet tendered to Sir William Mackenzie in Halifax on the occasion of the arrival of the first Canadian Northern liner from Bristol, he was present, and made one of the best speeches of the evening. Later on it was softly whispered that he had a very sweet voice, and that he was equally at home singing a hymn or a love song. There was a cry for a song from him, the doors being barred to prevent an escape. When he found there was no way to avoid it he surrendered, and delighted the crowd by singing that sweet little Scotch ballad, "I Love a Lassie." He was encoored time and again. After it was over a mild mannered old Presbyterian was heard to say: "My! I would dearly love to hear him sing 'A Few More Years Shall Roll.'"

It was in connection with this incident, Mr. Hanna avers, that he had the most amusing experience in his life. He had retired in the small hours of the night, and was just getting to sleep, when the telephone in his room rang. He answered it, and found, as so often happens, that the voice at the other end of the line belonged to a man who had some favor to ask. This individual prefaced his request by saying: "I'm afraid you don't know me, Mr. Hanna, but I heard you sing to-night." Surely this was a tribute to his abilities as a singer.

Mr. Hanna can be termed neither a sport nor a club man. While he is a member of some dozen clubs in Toronto, Ottawa, Winnipeg and elsewhere, he prefers the comforts and pleasures of home life to the best that any club can afford. You

may see him lunching any day at the Albany or the National or the Toronto, but once the day's work is over he is off in one of his motors to his home in Rosedale, where he dines en famille and spends the evening reading or playing billiards with any friend who may chance to drop in.

He is a solid type of citizen, this big Scotch-Canadian, to whose speech the burr of his native land still clings tenaciously. His success has been due not so much to any brilliant series of achievements as to steady, conscientious work, involving a mastery of detail that would appal most minds. Couple with this those other qualities of heart and mind which have endeared him to a wide circle of friends and you have a character worthy to be pointed out as a fitting example for the rising generation.—W. A. Craick.

## Traffic Orders by the Board of Railway Commissioners.

### Standard Freight Tariffs.

General order 249, Aug. 31. Re application of undermentioned railway companies for approval of their standard freight tariffs of maximum mileage tolls. The said freight tariffs having been filed on the basis prescribed by order in council, 1863, July 27, 1918, it is ordered that the following tariffs be approved; the rate scales of the said tariffs to be published in at least two consecutive weekly issues of the Canada Gazette and preceded by the following notice:—"The undermentioned standard freight tariffs having been filed for the approval of the Board of Railway Commissioners for Canada, and being found by the board to be in accordance with order in council approved by general order of the board no. 249, August 31, 1918, the rate scales thereof are hereby published as required by sec. 327 of the Railway Act."

### Interswitching of Freight Traffic.

General order 250, Sept. 16.—Re general order 230, May 17, 1918, in matter of freight traffic, and general order 243, July 25, 1918, postponing effective date of general order 230 until Oct. 1, 1918. Upon reading what is filed by the Canadian Manufacturers' Association, and upon its request for further postponement of the effective date of general order 230, it is ordered that the effective date of

general order 230 be further postponed until Nov., 1918.

### Rates on Caps and Hats.

27550. Aug. 1.—Re complaint of David Spencer Limited, Vancouver, against the interpretation placed by railway companies on item 240, page 59, Canadian freight Association Westbound Tariff no. 1, reading inter alia "Hats and caps (other than millinery) taking first class rating in current Canadian Freight Classification as applied to shipments of women's hats with plain band and binding only from Eastern Canada to Vancouver. Upon hearing the complaint at Vancouver, June 6, the complainant, the Canadian Pacific, Canadian Northern, and the Grand Trunk Pacific Railways being represented, and upon reading the report of the board's Chief Traffic Officer, it is declared that the proper rates on the shipments in question were the rates appearing in item 240 of Canadian Freight Association's Westbound Tariff no. 1, effective Sept. 20, 1916.

### Service on Private Siding.

27522. Aug. 26.—Re application of New Minas Fruit Co. of White Rock, N.S., for an order directing the Dominion Atlantic service on the applicant company's siding without any charge in excess of the regular freight rates and that the railway return charges unjustly collected for the upkeep of the siding. Upon hearing the application at Kentville, N.S., July 4, in the presence of counsel for the applicant company and the railway company, and upon its appearing that the board is without jurisdiction in the matter, it is ordered that the application be dismissed.

### North Mountain Ry. Passenger Tariff.

27702. Granting application of Dominion Atlantic Ry. Co. for approval of Standard Passenger Tariff C.R.C. 1 of North Mountain Ry. on the basis of 3.45c a mile.

### Canadian Northern Ry. Rates on Wood Pulp.

27568. Aug. 16. Re complaint of Minnesota & Ontario Power Co., of International Falls, Minn., against increased rates on pulpwood from Canadian Northern Ry. stations to International Falls, as shown in C.N.R. tariff W-2051, C.R.C. W-1101, effective May 18, 1918: Upon hearing the complaint at Fort Frances, June 18, the complainant and the C.N.R. being represented, and upon the report of the board's Chief Traffic Officer, it is ordered that the complaint be dismissed.

### Bills of Lading for Grain at Fort William and Port Arthur.

27715. Sept. 27. Re complaint of Bole Grain Company, Fort William, Ont., that the C.P.R. refuses to issue bills of lading for grain weighed by the government weighing department except with the provision "Shipper's load and count." Upon hearing the complaint at Port Arthur, June 19, 1918, the Fort William and Port Arthur Grain Exchange, the Canadian Pacific, Canadian Northern and Grand Trunk Railways and the Ogilvie Flour Mills being represented, no one appearing for the complainant, and what was alleged, and upon reading the further written submissions filed, it is ordered that the complaint be dismissed.

A press report states that as a result of the disapproval by the Director General of United States Railroads of railways operating over leased lines, it is probable that the Wabash Rd. may have to cease operating in Canada. The Wabash operates over the Grand Trunk Ry.'s old air line under a lease which expires in 1919.

## Mainly About Railway People Throughout Canada.

**L. M. Conroy**, ticket clerk, C.P.R., Halifax, N.S., was presented with a travelling bag recently, on resigning from the service.

**M. J. O'Brien**, railway contractor, and President, Canada & Gulf Terminal Ry., Ottawa and Renfrew, Ont., has been appointed a senator.

**R. Home Smith**, President, Algoma Central & Hudson Bay Ry., and one of the Toronto Harbor Commissioners, has been appointed Fuel Commissioner for Ontario.

**A. E. Doucet**, formerly District Engineer, National Transcontinental Ry., Quebec, Que., has resigned as President, St. Maurice Mines Co., and has been elected Vice President.

**G. C. Martin**, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., was one of the speakers at the Canadian National Exhibition directors' luncheon at Toronto, Sept. 3.

**U. E. Gillen**, Vice President, G.T.R., who was taken ill suddenly at Trenton, Mich., about the middle of September, was reported Sept. 24, to be much better, and resting at his home.

**E. McDonald**, General Baggage Agent, Grand Trunk Pacific Ry., Winnipeg, has returned to duty, after an absence of a few weeks, having received a military discharge as unfit for active service.

**H. C. Grout**, General Superintendent, New Brunswick Division, C.P.R., St. John, N.B., received news of the death of his father, A. C. Grout, Manager, First National Bank, Wausau, Wis., recently.

**A. B. Eldredge**, President and General Counsel, Duluth, South Shore & Atlantic Ry., Marquette, Mich., was found dead in his bed at the Manhattan Hotel, New York, Sept. 9. The cause of death is given as internal haemorrhage.

**W. B. Lanigan**, whose appointment as Freight Traffic Manager, C.P.R., Montreal, was announced in our last issue, was entertained to luncheon in Winnipeg recently by local C.P.R. officials, on leaving for the east to take up his new duties.

**W. H. Biggar**, K.C., Vice President and General Counsel, and **Frank Scott**, Vice President and Treasurer, G.T.R., have been appointed, by a court order, trustees for the Toronto Belt Line Ry. Co. mortgage holders, in place of W. S. Lee and C. S. Czowski, deceased.

**W. H. Newman**, President, New York Central Lines, from 1901 to 1909, died Aug. 14, aged 71. He commenced railway service in 1869. On his resignation as President, in 1909, he took personal charge of the plans of the Grand Central terminal in New York, becoming responsible for the carrying out of the work.

**John Vass**, who has been appointed Assistant Superintendent of Motive Power, Ontario Lines, G.T.R., Allandale, Ont., was born at Braidwood, Scotland, and went to the U.S. in 1888, and was, to 1894, locomotive fireman, Wabash Rd., Chicago, Ill.; 1894 to 1895, locomotive fireman, G.T.R., Battle Creek, Mich.; 1895 to 1903, locomotive man, G.T.R., Battle Creek, Mich.; 1903 to June, 1918, Road Foreman of Locomotives, Nichols, Mich.; June to Sept. 1, 1918, Assistant Master Mechanic, Ontario Lines, Allandale, Ont.

**Edwin Roy Battley**, who has been appointed Superintendent of Motive Power, Eastern Lines, G.T.R., Montreal, was born at Stratford, Ont., Oct. 21, 1886, and entered G.T.R. service, Dec. 1, 1902, since when he has been, to Dec. 1, 1907, machinist apprentice, Stratford, Ont.; Dec. 1,

1907, to Jan., 1909, machinist, Stratford; Jan., 1900, to Mar. 12, 1910, to July 1, 1914, Locomotive Foreman, Fort Erie, Ont.; July 1, 1914, to Sept. 1, 1917, General Foreman, Deering, Me.; Sept. 1, 1917, to Sept. 1, 1918, Master Mechanic, Eastern Lines, Montreal.

**H. R. Safford**,  
Engineering Assistant to Regional Director,  
Central Western District, U.S. Railroad  
Administration.

**W. H. Sample**,  
Superintendent of Motive Power, Grand Trunk  
Western Lines Railroad.

**Herbert Mitchinson**, whose appointment as Safety Engineer, Western Lines, Canadian Government Railways, Winnipeg, was announced in our last issue, was

born at Gateshead-on-Tyne, Eng., Jan. 18, 1882. He was from Mar., 1898, to Mar., 1911, a cabinet maker on the North Eastern Ry., Newcastle, Eng., and from Mar., 1911, to May, 1912, engaged in mechanical work, welding, etc., Armstrong, Whitworth & Co., Elswick Works, Newcastle, Eng. He came to Canada in 1912, and from Sept. of that year to Sept., 1913, was assistant principal of the Indian School, Brandon, Man.; Oct., 1913, to June 30, 1915, First Aid Instructor, Grand Trunk Pacific Ry., Transcona, Man.; July 1, 1915, to Nov., 1916, First Aid Instructor, Canadian Government Railways, Transcona, Man.; Nov., 1916, to July 31, 1918, First Aid Instructor and Safety Inspector, Western Lines, Canadian Government Railways, Transcona, Man.

**Wilmer Herbert Sample**, who has been appointed Superintendent Motive Power, Grand Trunk Western Lines Rd., Detroit, Mich., under the U.S. Railroad Administration, was born at Altona, N.Y., Aug. 20, 1864 and entered railway service Aug. 20, 1882, since when he has been, to 1887, fireman, Central Vermont Ry., St. Albans, Vt.; 1887 to 1890, locomotive man, Atcherson, Topeka & Santa Fe Ry., Albuquerque, N.M.; 1890 to 1901, locomotive man, Central Vermont Ry., St. Albans, Vt.; 1901 to 1906, Road Foreman of Locomotives, Central Vermont Ry., St. Albans, Vt.; 1906 to 1911, Superintendent of Motive Power and Car Department, Northern Ry. of Costa Rica (United Fruit Co.), San Jose, Costa Rica; Mar. 15, 1911, to Oct., 1914, Master Mechanic, G.T.R., Ottawa; Oct., 1914, to Oct., 1916, Master Mechanic, G.T.R., Battle Creek, Mich.; Oct., 1916, to Sept. 1, 1917, Master Mechanic, Eastern Lines, G.T.R., Montreal; Sept. 1, 1917, to Aug. 26, 1918, Superintendent of Motive Power, G.T.R., Montreal.

**F. X. Belanger**, after 22 years service with the Temiscouata Ry., latterly as General Freight and Passenger Agent at Riviere du Loup, Que., resigned recently on his appointment as Traffic Manager, Fraser Companies, Limited, with office at Edmundston, N.B. This is a \$10,000,000 concern, owned by two brothers, and which operates 9 lumber mills, 3 planing mills and 2 shingle mills at various points in New Brunswick and Quebec, in addition to which it is just completing the erection of a sulphite mill at Edmundston, which will be the second largest in North America, with a capacity of 140 tons a day. The company has large tracts of timber limits in Nova Scotia and Quebec not yet developed. In writing recently to have his address changed, Mr. Belanger said: "While I have left railway service, I still wish to keep in close touch with railway matters and know of no better medium than Canadian Railway and Marine World, of which I have been a constant reader almost ever since its inception."

**H. R. Safford**, who has been appointed Engineering Assistant, Central Western Region, U.S. Railroad Administration, Chicago, Ill., was born at Madison, Ind., in 1875, and prior to graduation in civil engineering from Purdue University in 1895, was engaged with an engineering corps operating on the Pennsylvania lines immediately west of Pittsburg, Pa. In 1895 he entered Illinois Central Rd. service, remaining with it until May, 1910, and holding the following positions: 1895, rodman; 1896 to 1897, Resident Engineer; 1897 to 1900, Assistant Engineer; 1900

to 1901, Roadmaster, Amboy Division; 1901, Roadmaster, Freeport Division; 1902, Roadmaster, St. Louis Division; 1903 to 1905, Principal Assistant Engineer; 1905 to 1907, Assistant Chief Engineer; 1907 to 1910, Chief Engineer, Maintenance of Way. From 1910 to Oct., 1911, at which latter date he was appointed Chief Engineer, G.T.R., Montreal, he was not in railway service.

**J. Mitchell Silliman**, who has been appointed Division Engineer, Maintenance

of Way, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., was born at Easton, Pa., Sept. 8, 1885, and entered C.P.R. service in June, 1907, since when he has been, to Aug., 1907, leveller, right of way survey, Atlantic Division; Aug. to Dec., 1907, transit man, District 2, Atlantic Division; Jan. to Apr., 1908, rodman on reconnaissance survey, Lake Superior Division; May, 1908, to Oct., 1909, transit man, District 1, Atlantic Division; Nov., 1909, to Mar., 1910, transit man, District

1, Lake Superior Division; Mar., 1910, to Mar., 1911, transit man, District 3, Lake Superior Division; Mar., 1911, to Sept., 1912, Resident Engineer, Construction Department, Guelph Jct. to Hamilton, Ont.; Sept., 1912, to Mar., 1915, Resident Engineer in charge of construction of Forsyth St. branch, Montreal; Mar. to Dec., 1915, District Engineer on construction, in charge of Lake Erie & Northern Ry.; Jan., 1916, to Sept. 3, 1918, Resident Engineer, London, Ont.

## Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**British Ministry of Shipping.**—**SIR ARTHUR H. HARRIS**, formerly Special Traffic Representative, C.P.R., and latterly Director of Overseas Transport, is reported to have been appointed Director General for Canada, British Ministry of Shipping.

**Canada Atlantic Transit Co. of United States.**—The duties hitherto performed by **C. A. GORMALLY**, Commercial Agent, Chicago, Ill., and **H. W. PLOSS**, Commercial Agent, Milwaukee, Wis., are now performed by **J. B. HECKENDORN**, Agent, Chicago, Ill.

**Canadian Government Railways.**—**J. E. STEWART** has been appointed Locomotive Foreman, Hearst, Ont., vice **C. W. Wilson**, on leave of absence for military service.

**W. H. FLETCHER**, heretofore with Dominion Copper Products Co., Montreal, has been appointed Locomotive Foreman, Sioux Lookout, Ont., vice **C. H. Moulton**, transferred.

**C. H. MOULTON**, heretofore Locomotive Foreman, Sioux Lookout (formerly Graham), Ont., has been appointed Locomotive Foreman, Transcona, Man.

**Canadian Northern Ry.**—**D. B. HANNA**, heretofore Third Vice President, has been elected President, vice **Sir Wm. Mackenzie**, resigned.

**SIR DONALD MANN**, Vice President, has resigned.

**A. J. MITCHELL**, heretofore Assistant to Vice President, C.N.R., and Comptroller, Mackenzie, Mann & Co., Ltd., has been appointed Vice President, Finance and Accounting, C.N.R. Office, Toronto.

**R. C. VAUGHAN**, heretofore Assistant to the Third Vice President, has been appointed Assistant to the President, Office, Toronto.

**LEWIS LUKES**, heretofore Assistant to the President, **Sir Wm. Mackenzie**, has left the company's service.

**Z. A. LASH, K.C.**, heretofore director and Senior Counsel, has been appointed Senior Counsel, Office, Toronto.

**R. P. ORMSBY**, heretofore Assistant Secretary, has been appointed Secretary, vice **W. H. Moore**, resigned. Office, Toronto.

**G. DUFF** has been appointed Roadmaster, Montreal Division, with jurisdiction over Joliette Subdivision, Aldred to Montreal, Hawkesbury Subdivision, Joliette to Rinfret, Montfort Subdivision and Rawdon Subdivision, Quebec District, Headquarters, Montreal.

**A. E. WARREN**, who was in Ottawa for several months as Chief Operating Officer, Railways and Canals Department, has returned to Winnipeg and resumed his duties as Assistant to General Manager, Western Lines, C.N.R.

**Canadian Pacific Ry.**—**P. J. MELVIN**, heretofore chief clerk to Export Freights

Agent, has been appointed acting Export Freight Agent, Montreal, **G. D. ROBINSO**, Export Freight Agent, having entered the service of the British Ministry of Shipping (Canada).

**C. S. GOWANS**, heretofore chief clerk to Import Freight Agent, has been appointed acting Import Freight Agent.

**W. B. Lanigan**,  
Freight Traffic Manager, Canadian Pacific  
Railway.

Montreal; **W. T. MARLOW**, Import Freight Agent, having entered the service of the British Ministry of Shipping (Canada).

**G. H. DAVIS**, Resident Engineer, Toronto Terminals, is reported to have been appointed Assistant Engineer, Maintenance of Way, Eastern Lines, Montreal.

**J. P. DOHERTY**, in Canadian Pacific Ocean Services' employ, is reported to have been appointed Travelling Freight Agent, C.P.R., St. John, N.B., vice **J. E. Green**.

**H. J. MAIN**, heretofore Assistant Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Assistant Superintendent, Farnham Division, Quebec District, vice **W. J. Pickrell**, promoted. Office, Farnham, Que.

**J. A. COOK** has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, vice **H. J. Main**, transferred. Office, Smiths Falls, Ont.

**R. E. SEWELL**, Chief Inspector of

Transportation, Montreal, is acting as Superintendent, Ontario District, Trenton, during the absence of **W. J. UREN**, on leave.

**U. A. G. DEY**, Assistant Engineer of Construction, is reported to have been appointed Assistant Engineer of Toronto Terminals, vice **G. H. Davis**, Resident Engineer, promoted.

**A. L. MCGREGOR** has been appointed Car Foreman, Sudbury, Ont., vice **C. Brownlee**.

**Delaware & Hudson Rd.**—**J. M. SILLIMAN**, heretofore Resident Engineer, C.P.R., London, Ont., has been appointed Division Engineer in charge of maintenance of way forces, Susquehanna Division, D. & H.R., under the U.S. Railroad Administration, vice **H. S. Rogers**, resigned. Office, Oneonta, N.Y.

**Duluth, South Shore & Atlantic Ry.**—The following appointments have been made by the U.S. Railroad Administration:—**C. E. LYTLE**, General Superintendent, Marquette, Mich.; **S. R. LEWIS**, General Freight Agent, Duluth, Minn.; **JAMES MANEY**, General Passenger Agent, Duluth, Minn.; **A. E. MILLER**, heretofore General Attorney, to be General Solicitor, Marquette, Mich.; **E. R. LEWIS**, heretofore Assistant to General Manager, to be Chief Engineer, Marquette, Mich.; **I. H. HARSH**, Purchasing Agent, Duluth, Minn.; **A. E. DELF**, heretofore Comptroller, to be Federal Auditor, Marquette, Mich.; **W. J. ELLISON**, heretofore Treasurer, to be Federal Treasurer, Marquette, Mich.

**Grand Trunk Ry.**—**E. R. BATTLE**, heretofore Master Mechanic, Eastern Lines, Montreal, has been appointed Superintendent of Motive Power, Eastern Lines, Office, Montreal.

**G. M. WILSON**, heretofore Master Mechanic, Montreal shops, has been appointed Superintendent of Motive Power Shops, Montreal.

**A. McDONALD** has been appointed Assistant to Superintendent of Motive Power Shops, Montreal.

**R. J. NEEDHAM** has been appointed Mechanical and Electrical Engineer, Motive Power and Car Department, Office, Montreal.

**D. J. McCUAIG**, heretofore Master Mechanic, Ontario Lines, Toronto, has been appointed Superintendent of Motive Power, Ontario Lines, Office, Toronto.

**JOHN VASS**, heretofore Assistant Master Mechanic, Ontario Lines, Allandale, Ont., has been appointed Assistant to Superintendent of Motive Power, Ontario Lines, Office, Allandale, Ont.

**J. C. GARDEN**, heretofore Master Mechanic, Stratford Shops, Ont., has been appointed Superintendent of Motive Power Shops, Stratford, Ont.

**J. R. LECKIE**, heretofore Assistant Master Mechanic, Ontario Lines, London, Ont., has been appointed Assistant to Superintendent of Motive Power, Ontario Lines, Office, London, Ont.

C. A. SAYLER has been appointed Locomotive Foreman, Sarnia, Ont., vice J. Hay, whose appointment as Master Mechanic, G.T.R. Lines in New England, at Portland, Me., under the U.S. Railroad Administration, was announced in our last issue.

**Grand Trunk Pacific Ry.**—R. M. HALPENNY, heretofore Assistant Superintendent, Jasper, Alta., has been appointed Superintendent, lines between Edmonton, Alta., and Prince George, B.C., not including Edmonton, vice J. P. Kirkpatrick, resigned. Office, Edson, Alta.

S. SMITH, heretofore Resident Engineer, Melville, Sask., has been appointed Assistant Superintendent, Edson Division, Edson, Alta.

**Grand Trunk Ry. Lines in New England.**—C. B. WEISS, heretofore Assistant Engineer, Montreal Division and Montreal Terminals, G.T.R., has been appointed Assistant Engineer, G.T.R. Lines in New England, under the U.S. Railroad Administration, not Chief Engineer, as mentioned in our last issue. Office, Portland, Me.

H. L. BLACK has been appointed Superintendent of Signals, under the U.S. Railroad Administration. Office, Portland, Me.

**Grand Trunk Western Lines Rd.**—W. H. SAMPLE, heretofore Superintendent of Motive Power, G.T.R., Montreal, has been appointed Superintendent Motive Power, G.T.W.L. Rd., under the U.S. Railroad Administration. Office, Detroit, Mich.

T. T. IRVING, heretofore Division Engineer, G.T.R., Chicago, Ill., has been appointed Chief Engineer, G.T.W.L. Rd. Office, Detroit, Mich.

G. BRADSHAW, heretofore Safety Engineer, G.T.R. and G.T.P.R., Toronto, has been appointed Safety Engineer, G.T.W.L. Rd., Detroit, Mich.

**Grand Trunk Western Lines Rd.-Pere Marquette Ry.**—The following appointments have been made jointly for these railways, under the U.S. Railroad Administration:—J. L. CRAMER, Local Treasurer; C. S. SIKES, General Auditor; J. O. TALBOTT, Assistant General Auditor; A. C. RHODES, General Accountant; F. HORTON, Auditor Station Accounts; K. A. KARLSON, Auditor Disbursements; P. HEITMANN, Assistant Auditor Disbursements; A. J. ANDERSON, Auditor Freight Traffic; C. E. CONNALLY, Assistant Auditor Freight Traffic; F. W. NEIMANN, Auditor Passenger Traffic; H. F. FARRELL, Auditor Overcharge Claims; all with offices at Detroit, Mich.

**Minneapolis, St. Paul & Sault Ste. Marie Ry.**—The following appointments have been made by the U.S. Railroad Administration:—W. L. MARTIN, heretofore Vice President (Traffic Department), to be Traffic Manager; H. B. DIKE, heretofore Assistant to the President and General Solicitor, to be General Solicitor; E. A. WHITMAN, Chief Engineer; E. T. STONE, Purchasing Agent; C. W. GARDNER, heretofore Comptroller, to be Federal Auditor; C. F. CLEMENT, heretofore Treasurer, to be Federal Treasurer; all with offices at Minneapolis, Minn.

**New York Central Rd.**—The following appointments have been made by the U. S. Railroad Administration:—HARRY PARRY, heretofore Assistant General Passenger Agent, Buffalo, N.Y., has been appointed General Passenger Agent, lines east of Buffalo, N.Y. Office, New York.

W. S. RANDOLPH has been appointed Assistant General Passenger Agent, Buf-

falo and east, Buffalo, N.Y., vice Harry Parry, promoted.

A. L. MILLER has been appointed General Agent, Albany, N.Y.

### The Canadian Northern Railway's Line into the Nitinat Country.

Lord Shaughnessy, President, C.P.R., was reported by the Vancouver World of Sept. 19 as having stated that in his opinion the construction of the Canadian Northern Ry. line from Nitinat to Sooke was entirely unwarranted, and as having characterized the expenditure for it as extravagant waste. It appeared that the getting out of aeroplane spruce was given as an excuse for the construction of the line, which he claimed was not required at this time.

The Premier of British Columbia is

E. R. Battley.

Superintendent of Motive Power, Eastern Lines, Grand Trunk Railway.

reported to have given the following interview on the evening of the same day:

"The line is not being laid either by, or at the expense of, the B.C. Government, and if Lord Shaughnessy has any criticism, he should direct the same to the Dominion Government and not the provincial one. Several months ago, at a meeting with Major Taylor, of the Imperial Munitions Board, charged with getting out airplane spruce, I discussed with him the spruce resources of the province, especially the magnificent spruce belt which I am reliably informed exists in the Nitinat country. Major Taylor informed me he had had it cruised and that it was very desirable. He desired to get it out for war purposes, but said that unless transportation was provided it would not be available. It was known to both of us that the C.N.R. line was graded from the south end of Cowichan Lake into the Nitinat country, and that the grade could be utilized if rails could be procured. The province was receiving from the U.S. Steel Products Co. some 20,000 tons of rails and equipment for the Pacific Great Eastern Ry. These

would lay upwards of 200 miles and we had probably 70 or 80 miles of rails already in stock at various points along the P.G.E.R. We were not in a position to use the rails immediately. When in Ottawa in May last I discussed with the Minister of Railways, the question of the Dominion Government completing the lines in B.C., which were undertaken by the C.N.R. I expressed a desire to lay the rails, but the trouble was that we could not get them. At that time the statement was made to me that if we procured the rails the Dominion Government would be willing. After discussing the spruce situation with Major Taylor, I informed him that the province could loan the rails. When I took up the matter with my colleagues it was pointed out that it was very desirable to get the rails laid from Victoria, through the agricultural district of Sooke, and into the timber belt northwest of Sooke harbor. Then the matter was taken up with the Dominion Minister of Railways and the offer to loan the rails on the condition that as soon as they could be procured the Dominion Government was to return them to us, was made. We have ample rails, over what we are loaning to the government, to carry the P.G.E.R. to Soda Creek. I expect the steel will be returned by the time we are in a position to use it."

### Official Test of the Quebec Bridge.

As stated in Canadian Railway and Marine World for September, the Quebec Bridge Board of Engineers made an official test of the bridge on Aug. 21, in accordance with the specification's requirements. Two heavily loaded trains, each hauled by 2 Santa Fe locomotives, were placed on the bridge, completely filling both tracks of the 1,800 ft. span between the two main piers. The 4 locomotives, instead of being at the extreme end of the train, were placed together at the end of the south cantilever arm, with cars in front and behind, this location providing the greatest effect on the span under their concentrated weight. Each of the locomotives weighed 514,000 lb., and the total weight of locomotives and cars was 6,627 tons, or an average over the whole span of about 3,500 lb. per lin. ft. on each track. The bridge was designed for 2 class E60 locomotives, followed and preceded by a train load of 5,000 lb. per lin. ft. of track. Although the trains used were the heaviest that it was practicable to obtain under normal conditions, it will be seen that there is ample room for increase in weight of locomotives and train loads before the bridge is actually loaded to the limits prescribed by the specification.

Under this somewhat severe test, the maximum deflections noted at the center of the suspended span was 6 $\frac{7}{8}$  in. The deflection at the south end of the suspended span, under the 4 locomotives, was 6 5 $\frac{32}{100}$  in., and at the north end of the suspended span it was 3 15 $\frac{16}{100}$  inches. The movement at the expansion joint, between the cantilever arm and the suspended span, under full load, was 1 $\frac{5}{8}$  in. This latter motion, however, was effected somewhat by temperature during the two hours the trains were left standing on the bridge. Under the maximum train loads prescribed by the specification, the calculated deflection at the end of the cantilever arm would amount to 10 in.

There was a marked absence of vibration while the trains were moving on the bridge, and the test, considering the conditions under which it was made, was highly satisfactory in every respect.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates.

The British Columbia Electric Ry. has filed with the Board of Railway Commissioners local passenger tariff B.C.E.R. 19, of commutation fares between points on the Vancouver and Lulu Island Ry. and on the Vancouver, Fraser Valley & Southern Ry. to cancel tariff B.C.E.R. 11.

In connection with the company's Victoria lines and business, George Kidd, General Manager, wrote the Mayor Aug. 30, asking the city to pass a bylaw authorizing the company to charge a 6c fare, with transfer privileges, in return for which concession the company would put in force the recommendations of the Shortt report that the Victoria franchise be brought into harmony with the Vancouver franchise, except as to the proportion of gross earnings paid, and to apply the Vancouver scale for lighting in so far as practical in Victoria. The principal change which this suggestion would make in the charter would be with respect to the maintenance of track allowance. The company would be prepared to take over the maintenance of the 5.33 miles of track allowance in macadam, and the 18.82 miles of permanent roadway which is in good or fair condition, leaving 4.85 miles of track allowance to be maintained by the city. The company would also desire the passing of a bylaw to eliminate the jitney traffic in the city.

The City of Vancouver, Sept. 7, issued a writ in the Supreme Court against the British Columbia Electric Ry., asking for a declaration of the legality of clause 11 of city bylaw 394, and that it is binding on the company, and for an injunction restraining the company from charging more than a 5c fare for passengers on its cars within the city limits. Clause 11 is the one fixing a fare of 5c, providing for transfers, and for the sale of tickets at reduced fares during certain hours. On Sept. 12, a special application was made to the court to fix a day for hearing of the case, and Justice Murphy fixed Sept. 17 for opening the proceedings. When the case was called on Sept. 17 the city's counsel stated that by an arrangement with the company it would stand over for a week.

This is the present position of the differences between the council and the company that have been under discussion since the council, on July 8, passed a bylaw permitting the company to charge a 6c fare. The mayor refused to sign the bylaw, and the council, upon taking special legal advice, was informed that the bylaw would not be legal until it had been ratified by the ratepayers. As a result, the council, after several conferences and discussions, decided on Sept. 4 to submit the 6c bylaw to the ratepayers for approval on Oct. 5.

A side issue to the negotiations is the matter of electric light rates, which the council contends ought to be reduced, and a suggestion was made that the bylaw which eliminated the jitney traffic should be repealed, as a lever to get this reduction, and also the withdrawal of the 6c fare until after the vote on that bylaw.

Meanwhile the negotiations for the renewal of the franchise for five years are being proceeded with and it is expected that a tentative agreement will be reached early in October.

The Mayor of Vancouver informed the city council Sept. 12, that the company

would announce a new lighting schedule on Sept. 24. The council expected to complete the details of the proposed new franchise at the same time, and it was hoped that the terms of this franchise could be made public by Oct. 5, the date fixed for voting on the 6c street car fare bylaw.

**Edmonton Radial Ry.**—The increase of fares on this municipal railway which became operative in May has considerably reduced the number of passengers carried, particularly the short distance ones. The following figures show the passengers carried and the revenue for four months prior to the increase in fares and for the four months subsequent thereto:—

	Passengers.	Revenue.
January to April.....	3,836,686	\$179,148.75
May to August.....	1,179,192	170,137.01

The Edmonton Bulletin of Sept. 10 said:—"The street railway superintendent believes that the reduction of operating expenses has been carried to the point where it is impossible to go any further. Next week one-man cars will be operating over practically the whole of the city. At present there are only 6 two-men cars operating, and they will be taken out of service almost immediately. As said by officials previously in connection with the railway, the expense has been reduced to the lowest point, while no great influx of residents into the city can be immediately looked for. Therefore, it is said, the alternative in order to raise more money is to increase the fares. Suggestions along this line are likely to include the limiting of the purchase of tickets to 4 for 25c all the time."

The Edmonton Bulletin suggests the adoption of zone fares.

**Fort William Municipal Ry.**—The civic authorities of Fort William and Port Arthur applied to the Ontario Railway and Municipal Board in August for permission to put the following fares in effect on the municipal railways in each city:

Adults, 5c cash, or tickets at rate of 6 for 25c.

Children under 5 free; from 5 to 12 years of age, 5c cash, or tickets at rate of 8 for 25c.

The above fares to be in effect from 5.30 a.m. to midnight; double fares to be charged between midnight and 5.30 a.m.

These fares were to go into effect Sept. 3, but objections to them were filed with the board by labor organizations and no further action has been taken.

**Moncton Tramways, Electricity & Gas Co.** now has the following fares: cash 5c, or 6 unlimited tickets for 25c; workmen's tickets, good between 6.30 and 8 a.m., 12 noon and 2 p.m., and 5 and 6.30 p.m., 8 for 25c. The company applied recently to the New Brunswick Public Utilities Commission for permission to discontinue issuing workmen's tickets, and to charge a 5c fare throughout, and the hearing was fixed to be held at St. John, Sept. 25.

**Montreal Tramways Co.**—Full particulars of the Quebec Public Utilities Commission's judgment, fixing the company's passenger fares, are given on another page of this issue.

**New Brunswick Power Co.**—The commission appointed by the New Brunswick Government to investigate the New Brunswick Power Co.'s affairs, with power

to advance its rates for transportation, gas and electric current, made an interim order early in September, to go into effect on Oct. 1. After fixing maximum rates for electric lighting and power and for gas, the order contains the following clause:—"That as of the said date (Oct. 1), and thereafter until the further order of the commission, the street railway fare shall be 6c. The company shall not be required to issue tickets. Transfer privileges shall remain in force without change. Outstanding tickets shall not be valid for fares after said date, but shall be redeemed in cash on demand at the company's office."

Following are further extracts from the order:—"The commission has caused the company's accounts to be examined by Lybrand, Ross Bros. & Montgomery, accountants familiar with public utility accounting. It appears from their report that the company is not earning its operating expenses, to say nothing of any return on its investment. The net operating income has entirely disappeared in the recent increase in operating expenses, which the accountants report to be at the rate of \$177,041 a year in the two items of coal and labor alone.

"Counsel for the city is carrying on, with the aid of experts, an extended enquiry into the valuation of the properties. The commission is affording every facility for this enquiry, and regards it as an important factor in any final determination of rates. It is apparent, however, that the present earnings of the company are entirely inadequate to pay a return on its investment, computed on any theory, or even to guarantee the continuance of service. The proceeds of the increased rates which the commission has established in this order will not, in the commission's opinion, be sufficient to produce even the amount which was required for interest and dividends on the shares and securities of the St. John Ry. Co. before its acquisition by the N.B. Power Co.

"It has become apparent to the commission in the course of its investigation of the company's affairs that the present relations between the municipality and the company are not such as should exist in the interests of the community. It is the commission's hope that before it reaches its final conclusion some method may be found to harmonize these relations. The same problems which are presented by the situation in St. John have existed in many other localities, and in some cases have been settled by some form of public control or supervision. In the commission's opinion the controversy between the City of St. John and its public utilities cannot be permanently settled to the advantage of either party by the mere establishment of a correct rate base and the determination of a proper interest return.

"The commission is of the opinion that certain economies may be effected in operation, which, however, cannot be made effective in time to assist in meeting the present emergency. The commission requires, however, the company to make no further payment of salaries to the executive committee or to officers not connected with operation while this order remains in effect. The commission recommends to the company that it make an immediate study of the question of

more satisfactory as well as more economical routing of cars, and that it put in operation a sufficient number of one-man cars to determine their economical value and suitability for the service.

"It is not within the commission's authority to amend the contract for municipal lighting. It does, however, recommend to the City of St. John that it consent to such an amendment so that the prices under the contract shall be increased 25%."

**The Ottawa Electric Ry.**, on Aug. 27, filed with the Board of Railway Commissioners, the following special passenger tariff of tolls, C.R.C. 4, cancelling C.R.C. 3, effective Aug. 31:

Between points within the limits of the City of Ottawa, and between points therein and the Experimental Farm and intermediate points; between points within the limits of the City of Ottawa and the Rockcliffe Rifle Range and intermediate points, and between the westerly limits of the City of Ottawa and Britannia on the Bay, and intermediate points. Between 5.30 a.m. and 12 midnight, 5c.

Between 12 midnight and 5.30 a.m., 10c.

To workmen and others, 33 tickets for \$1, or 8 tickets for 25c, good from the first trip in the morning until 7.30 a.m., and between 5 and 6.30 p.m.

Seven tickets for 25c, good only on Sundays.

School children under 14, to and from school at the rate of 40 tickets for \$1, good between 7 and 9.30 a.m., 11.30 a.m. and 1.30 p.m. and 3.30 and 5 p.m.

Children under 10 years of age, 3c.

The effect of this new tariff is to do away with tickets sold formerly at 6 for 25c, and 25 for \$1, making the rates the same as provided for in the company's agreement with the city, viz., 5c for fares between 5.30 and 12 midnight. For the convenience of passengers who do not wish to carry small change, the company sells strips of 5 tickets for 25c. Outstanding old style tickets are being redeemed by the company for cash.

The company issued the following notice to the public:—"The unprecedented increase in the costs of all materials used in the operation of street railways has made it necessary to increase fares. Between 200 and 300 cities in Canada and the United States have advanced fares to sums ranging from 6c to 10c, with an additional charge for transfers in some instances. In Ottawa the company's agreement with the city specifies a fare of 5c, with special provisions for tickets for workmen, school children and for Sunday use. The company, during normal times, when such action was warranted, made special reduced rates of 6 tickets for 25c, and 25 tickets for \$1, which privilege has been continued up to the present, and which the company would be glad to continue for a longer period but for the circumstances above referred to. The company therefore regrets that it is obliged for the present to withdraw the special ticket rates, and, beginning Aug. 31, to revert to the terms of its agreement with the city, viz., a fare of 5c. The reduced rates for workmen's, school children's and Sunday tickets will remain as heretofore. For the convenience of the public, beginning on the date specified, new tickets will be sold by conductors at the rate of 5 for 25c, instead of 6 as heretofore. All tickets now outstanding will be received on the cars in payment of regular fares up to and including Sept. 10."

**Port Arthur Civic Ry.**—See Fort William Municipal Ry.

**Quebec Ry., Light & Power Co.**—The Board of Railway Commissioners passed order 27,711, Sept. 21, approving the

Q.R.L. & P. Co.'s Standard Mileage Freight Tariff, C.R.C. 113, filed on the basis permitted in order in council 1,863, dated July 27, 1918.

**The Winnipeg Electric Ry.** advised the city council Sept. 10, that it was preparing to ask for authority to increase its fare to 7c, with unlimited transfers as at present, or in the alternative for a fare of 6c with a charge of 1c for transfers. It is said that the company does not propose to operate one-man cars.

**Increases in United States.**—Revised figures of fare advances granted traction lines throughout the United States and Canada up to September 15, compiled by the American Electric Railway Association, show that 24 cities have given the local street railways higher rates since July 1, 1918. The figures do not include interurban lines. It is stated that 246 increases had been granted up to July 1, and with the additions since that time, the total number of cities now paying higher rates for street railway service is 270.

### The Ottawa Electric Railway Franchise.

The Ottawa City Council, on Sept. 16, resumed consideration of a motion to reopen negotiations with the Ottawa Electric Ry. respecting the taking over of its lines by the city. The discussion extended over a very considerable period, and eventually the mayor drafted the following letter to the company, which was approved by the council:—"At a meeting of the council Sept. 16, a motion was presented recommending the opening of negotiations between the city and the company with a view to the possible purchase of the company's assets, or entering into a partnership agreement. The motion was withdrawn after a general expression of opinion that within certain limitations the city would be willing to discuss the possibility of an agreement being arrived at. I am instructed to inform you that the board of control is prepared to consider any proposal which the company might see fit to make, or is prepared to meet the representatives of the company for a preliminary discussion."

Jas. D. Fraser, Secretary-Treasurer of the company, replied on Sept. 18, in part as follows:—

"Before entering upon negotiations, it might be found desirable for the Corporation of Ottawa to consider the appointment of a committee of citizens for the purpose of investigating the question of civic ownership or partnership operation of street railway systems. If this method commends itself to your board, the company would respectfully suggest that the personnel of a committee appointed for the purpose indicated—to be called the tramway committee—might consist of three citizens of Ottawa, to be selected, as follows, viz.,—One representative of the business community, one representative of the civil service and one representative of the Allied Trades and Labor Council—and that neither the corporation nor this company should be represented on the committee.

"Various plans of civic ownership and partnership have been adopted in Canada and the United States. Of these plans the "Service at cost" method enacted into law by the State of Massachusetts recently, and the partnership plan adopted at Montreal recently, possess features of interest and merit which provide a field for investigation.

"Your board will remember that, during recent discussions with representatives of

this company in reference to extensions of the street railway system, it was pointed out that the company, in view of its limited franchise, could not fairly be expected to make further extensions, and that it would therefore be in the interest of the citizens interested in the desired extensions that a decision might be reached as early as possible as to whether the corporation intends to extend the franchise, which, as you are aware, provides that if the corporation does not exercise its right at that time the franchise automatically renews itself for an additional period of five years.

"An investigation by a committee, as suggested, of the methods adopted in other cities would no doubt enable your board to reach an early decision as to the most desirable plan to consider for the operation of the Ottawa street railway system, and when decided upon, the company will be glad to discuss the subject with your board. Such an investigation would enable the city to present to the electors full information upon the three plans, viz.:—(1) Civic ownership; (2) Partnership; (3) Extension of the present franchise, and the result of the proposed plebiscite would then be definite."

Mr. Fraser's letter was discussed by the city board of control, Sept. 21, after which the mayor intimated that the board would not entertain the idea of handing the question over to a committee as suggested. Considerable feeling having been expressed in favor of the council being consulted before the suggestion be rejected, the board of control met Sept. 24, when it was decided to hold a special meeting of the council Sept. 26, for the consideration of the letter, the board recommending that the proposal for the appointment of a committee be not agreed to.

### Employment of Women on Moose Jaw Electric Railway.

A. H. Dion, Superintendent, Moose Jaw Electric Ry., Moose Jaw, Sask., has favored us with the following information: "We have employed women as conductors for about two years and have found them very satisfactory. We now have about 22 employed. They are treated in exactly the same manner as the men whom they replaced and whose positions they fill. They work on the same schedule and are paid the same scale of wages, no difference being made between the male and female conductors. At present we have no male conductors, owing to the extreme shortage of men in the west, and have found that the employment of women for this work has been a most satisfactory means of overcoming the shortage. We do not give preference to female conductors, but have employed them solely owing to its being impossible to obtain men. We are seriously considering trying women as motormen and have had several applications from women for such employment."

### The Advantages of a Seven Cent Fare.

Pat—This is the foist time innny of these corporations hev done innnything to binnefit the workingman.

Mike—How is that, Pat?

Pat—It is this seven-cent fare. I hev bin walkin' to and from me work and savin' tin cints, and now I kin save fourteen cints.—Boston Transcript.

Increased Fares for Electric Railways in Great Britain.

The necessity for increased revenue for electric railways and other public utilities in Great Britain has been met by the passage by the House of Commons of the Statutory Undertakings (Temporary Increases of Charges) Act, 1918, as follows:—

1. (i.) Where it appears to the appropriate government department that the financial position of any undertaking to which this act applies has been adversely affected by circumstances arising out of the present war, the department may, if they think fit, by order provide for the modification of any statutory provisions regulating the charges to be made by the undertakers, and of any statutory provisions consequential on or supplemental to any such provisions as aforesaid, for such period during the continuance of this act, in such manner, and subject to such conditions, as appear to the department to be just and reasonable:

Provided that—  
(a) where the undertakers are a local authority no modification shall be authorized which will increase the statutory maximum charge by more than 50%, or which is more than sufficient so far as can be estimated to enable the undertaking to be carried on without loss; and

(b) In any other case no modification shall be authorized which is more than sufficient to enable with due care and management a dividend on the ordinary stock or shares of the undertaking to be paid at three-quarters the standard or maximum rate of dividend, if any, prescribed for the undertaking, or at three-quarters the pre-war rate of dividend, whichever is lower.

(ii.) An application to a department for the purposes of this act shall be accompanied by such information, certified in such manner as the department may require, with respect to the financial position of the undertaking in question, and before making an order the appropriate government department shall require the undertakers to give public notice of the application for an order under this act, and as to the manner in which and time within which representations may be made, and to give a similar notice to the council of each county, borough, or urban, or rural district within which any part of the undertaking or limits of supply of the undertaking is situate, and the department shall consider any representations which may be duly made.

(iii.) The undertakings to which this act applies are tramway undertakings, including light railways constructed wholly or mainly on public roads, and undertakings for the supply of gas, water and electricity, and in calculating the maximum charge which may be authorized under this act in respect of such tramway undertakings fractions of one halfpenny shall be calculated as one halfpenny.

(iv.) For the purposes of this act—  
The expression "statutory provisions" includes the provisions of any order having the force of an act;

The expression "appropriate government department" means, in relation to gas and water undertakings carried on by local authorities, the Local Government Board, and in relation to other undertakings the Board of Trade.

The expression "local authority" includes any commissioners, trustees, or other public body of persons carrying on, otherwise than for purposes of private profit, any undertaking to which this act applies.

The expression "pre-war rate of dividend" means the average rate of dividend for the three financial years immediately preceding the war.

2. In the application of this act to Scotland the Secretary for Scotland, and in the application of this act to Ireland the Local Government Board for Ireland, shall be substituted for the Local Government Board.

3. (i.) This act may be cited as the statutory undertakings (temporary increase of charges) act, 1918.

(ii.) This act shall have effect during the continuance of the present war and for a period of two years thereafter and no longer.

Toronto Civic Railway Deficits.

The Toronto Bureau of Municipal Research has issued "City Budget Facts, 1918," which contains the following statement of the financial results of operation of the civic car lines for the past five years:—

Year.	Expenditures (including debt charges)	Income	Amount in Loss.	Per cent of
1914..	\$ 250,102.25	\$ 167,498.12	\$ 82,604.13	49.3
1915..	332,074.25	199,980.49	132,093.76	66.1
1916..	343,975.17	225,031.38	118,943.79	52.8
1917..	432,436.83	275,972.78	156,464.05	56.6
Estimated 1918..	496,942.37	300,000.00	196,942.37	65.6
Total	\$1,855,530.87	\$1,168,482.77	\$687,048.10	58.9

The accompanying chart shows the increasing deficit from operating the lines.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	July, 1918.	July, 1917.
Gross .....	\$413,968	\$438,378
Expenses .....	394,803	380,054
Net .....	19,165	58,324

Cape Breton Electric Co.—

	July, 1918	July, 1917

Canadian Electric Railway Association's Annual Meeting.

The Canadian Electric Railway Association's annual meeting, held in Toronto, Sept. 17 and 18, was attended by a large number of representatives of member companies, the President, C. L. Wilson, Assistant Manager, Toronto & York Radial Railway, occupying the chair.

On account of war conditions, the usual practice of having papers read and discussed was omitted, and the greater part of the time was devoted to the reading and discussion of the Honorary Secretary's report on the association's work for the past year, and the discussion of other matters vitally affecting all electric railway companies, such as the necessity for securing increased revenues, etc.

The following were unanimously elected as officers: President, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway; Vice President, A. Gaboury, Superintendent, Montreal Tramways Co.; Honorary Secretary-Treasurer, Acton Burrows, Managing Director, Canadian Railway and Marine World, re-elected for the 12th consecutive year. Executive Committee: E. P. Coleman, General Manager, Dominion Power & Transmission Co.; Jas. D. Fraser, Director and Secretary-Treasurer Ottawa Electric Ry.; G. Gordon Gale, Vice President and General Manager, Hull Electric Co.; H. M. Hopper, General Manager, New Brunswick Power Co.; Geo. Kidd, General Manager, British Columbia Electric Ry.; M. W. Kirkwood, General Manager, Grand River Ry.; J. S. MacKenzie, Treasurer, Winnipeg Electric Ry.; R. M. Reade, Superintendent, City and Quebec County Divisions, Quebec Ry., Light & Power Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry. Assistant Secretary, A. A. Burrows, Business Manager, Canadian Railway and Marine World.

The New Brunswick Power Co. will, according to a press report, convert several of its cars on the St. John Ry. into one-man cars.

## Electric Railway Projects, Construction, Betterments, Etc.

**Calgary Municipal Ry.**—The question of a new route for the Ogden car line is under consideration by the Calgary, Alta., City Council. A right of way over private property is desired, and the council is considering the desirability of starting expropriation proceedings to secure the necessary land. (Sept., pg. 403.)

**Levis County Ry.**—We are officially advised that of the Quebec Bridge division, 7.25 miles, there has been rebalasted this year 2.50 miles, and that it is expected to finish a further distance of three miles before winter sets in. (Sept., pg. 403.)

**London & Port Stanley Ry.**—One of the London, Ont., City Council's committees was informed Sept. 12, that the steel for the Beattie bridge had been ordered, and that the work of building this bridge and raising the railway bridge would be taken in hand as soon as delivery of the steel was assured. Final plans for the entire work are promised to be submitted at an early date. (Sept., pg. 403.)

**Moose Jaw Electric Ry.**—The Moose Jaw, Sask., City Council, on Sept. 9, passed a resolution recommending the company to build a line from 4th Ave. s.w. and Coteau St., west to 9th Ave. s.w., thence north on 2nd Ave. to Lillooet St., and thence along Lillooet St. to 4th Ave. In the event of the company agreeing to build this line at once, the council will submit a bylaw to the ratepayers providing for a straight 5c fare, will endorse the one-man car proposals for the duration of the war, and will defer the collection of taxes for 1917 and 1918. (Aug., pg. 348.)

**Winnipeg Electric Ry.**—The city engineer reported to the city council recently that during June the company had expended on improvements \$31,379.23, of which \$418.46 was for elimination of electrolysis. Under the agreement with the city, the company is to expend \$25,000 a month for a specified term upon extensions and improvements.

The company has advised the Winnipeg City Board of Control that it does not regard the proposed extension for River Heights as being necessary, at present at any rate. (Sept., pg. 403.)

**American Institute of Electrical Engineers.**—The Toronto section opened its 16th season with an address by P. M. Lincoln of the Westinghouse Electric Manufacturing Co., East Pittsburg, Pa., on the development of power transmission. He reviewed the progress of electric power transmission from its inception, and presented comparisons with prior developments in power transmission, by hydraulic, mechanic and pneumatic methods. The records of early transmissions with alternating current, at approximately 1,000 volts, were especially interesting in view of their effect on the ultimate standardization of alternating current systems with existing voltages as high as 150,000. He also discussed the limitations to still higher voltages of transmission, and it is his opinion that, within five years, there will be one or more systems operating at 200,000 volts. In the course of the discussion, Jno. Murphy, Electrical Engineer, Railways and Canals Department, related some interesting experiences in connection with early electrical developments in Ottawa, with particular reference to his experience with one of the first synchroscopes, an early invention of Mr. Lincoln.

## Mainly About Electric Railway People.

F. Morton Morse, heretofore Secretary-Treasurer, Winnipeg Electric Ry., will in future act as Secretary only.

F. H. Williams, Publicity Agent, Win-

A. Eastman,  
Vice President and General Manager, Windsor,  
Essex & Lake Shore Rapid Ry., and President,  
Canadian Electric Railway Association.

J. S. Mackenzie,  
Treasurer, Winnipeg Electric Railway.

nipeg Electric Ry., was married at Kingston, Ont., Sept. 18 to Miss B. C. Holder.

A. W. McLimont, General Manager, Winnipeg Electric Ry., has been elected

a director of the Greater Winnipeg Board of Trade.

R. R. Knox, Traffic Superintendent, Winnipeg Electric Ry., has returned to duty, after medical treatment at Rochester, Minn., and a recuperating rest at Pinawa, Man.

J. S. Mackenzie, heretofore Purchasing Agent, Winnipeg Electric Ry., has been appointed Treasurer, not Assistant Treasurer, as stated in Canadian Railway and Marine World for September.

J. A. Ellis, a former Mayor of Ottawa and ex member of the Ontario Legislature, has been appointed a member of the Ontario Railway and Municipal Board, in place of H. N. Kittson, of Hamilton, who retired some months ago.

W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., and President, Southern Canada Power Co., who was a United States citizen, was admitted to Canadian citizenship at Hamilton, Ont., Sept. 17.

C. H. Rust, latterly City Engineer of Victoria, B.C., and formerly City Engineer of Toronto, has been appointed Assistant to D. H. McDougall, who is Assistant to R. J. Fleming, General Manager, Toronto Electric Light Co., and Toronto Power Co., which are subsidiaries of the Toronto Ry. Co.

Lawrence Palk, whose appointment as Assistant Secretary, Winnipeg Electric Ry., and Secretary of the Winnipeg, Selkirk & Lake Winnipeg Ry., was announced in our last issue, was born at Winnipeg, Aug. 14, 1885, and entered the company's service in Oct., 1904, as stenographer to the General Manager, and has since been secretary to General Manager, Claims Agent, Accident Investigator, and since Feb., 1916, Assistant to General Manager, which position he still holds.

Arthur Gahoury, who was elected Vice President, Canadian Electric Railway Association, was born at Montreal, April 6, 1875, and entered Montreal Street Ry. Co.'s service, June 4, 1894, since when he has been, to Oct., 1900, conductor and motorman; Oct. to Nov., 1900, Assistant Inspector; Nov. to Dec., 1900, night clerk, Cote St. Barn; Dec., 1900, to Sept., 1903, day chief clerk, St. Denis; Sept., 1906, to May, 1906, Claims Agent; May, 1906, to 1907, Assistant Superintendent; and from 1907, Superintendent, which position he still occupies in Montreal Tramways Co.'s service. He was, early this year, appointed, by the French Government, an officer of the French Academy.

Albert Eastman, who was elected President, Canadian Electric Railway Association, was born in Bosanquet Tp., Ont., Aug. 21, 1870. He entered transportation service in 1889, and was to 1891, operator, Michigan Central Rd.; 1892 to 1900, freight and ticket clerk and operator, G.T. R., Detroit, Mich.; 1901, assistant agent, Michigan Central Rd.; 1892 to 1900, to Nov., 1902, Travelling Express and Passenger Agent, Detroit United Ry.; Dec., 1902, to May, 1903, General Express Agent, Utica and Mohawk Valley Ry.; May to Nov., 1903, Division Superintendent, Detroit United Ry.; Nov., 1903, to Nov., 1907, Superintendent of Employment, Public Service Corporation of New Jersey; Nov., 1907, to May, 1910, General Express and Passenger Agent, New York State Railways, Syracuse and Utica, N.Y.; May, 1910, he was appointed General Manager, and in 1914, also Vice President, Windsor, Essex and Lake Shore Rapid Ry., Kingsville, Ont.

### Winnipeg Electric Railway's New Cars.

As mentioned in a previous issue, the Winnipeg Electric Ry. is having 10 cars built by the Ottawa Car Manufacturing Co. They will be double truck, single end, semi steel, p.a.y.e. type, with arch roof. The interior lighting arrangements include 5 shaded lights in the center of the arch roof, through selector switch on rear platform over conductor's position. The vestibule doors of the 2-leaf type will fold out and back and will be controlled by the motorman and conductor and operated in conjunction with the folding step. The heating will be hot air, and Keystone illuminated side window signs are to be installed on each rear window and front vestibule side window. The trucks, air brakes, motor equipment and Coleman fareboxes are being supplied by the Winnipeg Electric Ry.

The general details are:

Seating capacity .....	46
Weight of car body .....	1,900 lbs.
Length of car body .....	33 ft. 3 ins.
Length of front vestibule .....	5 ft.
Length of rear vestibule .....	7 ft. 6 ins.
Length over bumpers .....	45 ft. 8 ins.
Width over all .....	8 ft. 6 ins.
Distance between bolsters .....	21 ft. 6 ins.

### London and Port Stanley Railway Report.

A short summary of the receipts and expenditures of the London & Port Stanley Ry. for the year ended June 30 was given in our last issue, since when the full report has come to hand, and the following figures are taken from it:

Income.	
Passenger earnings .....	\$177,598.28
Freight earnings .....	143,698.96
Miscellaneous earnings .....	47,706.81
Total earnings .....	\$368,914.05
Operating expenses .....	254,659.85
Gross income .....	\$114,254.20
Deductions,—	
Taxes .....	\$ 2,252.8
Interest .....	53,732.56
Rental .....	20,000.00
Sinking fund .....	14,766.29
	90,750.23
Net income .....	\$23,039.97
Surplus Income.	
Year ended June 30, 1916 .....	\$18,474.11
Year ended June 30, 1917 .....	26,581.48
Year ended June 30, 1918 .....	23,503.97
Total .....	\$68,559.49

Statistics.	
Passenger car mileage .....	456,130
Freight, mail and express car mileage .....	347,137
Fare passengers carried .....	842,641
Average fare, revenue passengers .....	20.27c
Car earnings per car mile .....	38.53c
Miscellaneous earnings per car mile .....	5.72c
Operating expenses per car mile .....	30.55c
Operating expenses and taxes per car mile .....	30.82c
Tons of freight carried .....	614,351

**Toronto Ry. Litigation.**—Judgment was delivered in Toronto recently in favor of the city against the Toronto Ry., on a claim for \$95,859.25, being 20% of gross receipts for May, 1915, and interest on \$93,799.71 from Nov. 15, 1915, and costs of the action, without prejudice to the rights or obligations of either party as to apportionment or recovery of the costs of constructing the Don River bridge or any part of it. Judgment was also given in favor of the Toronto Ry. against the city on a counter claim for \$82,040.51, with interest on \$70,686.97 from May 3, 1915, and on \$11,333.54 from Dec., 1915, and the costs of the counterclaim. A stay of 20 days was granted in both cases. The Toronto Ry. did not dispute the city's claim, but had withheld payment pending the settlement of the company's claims against the city for certain work done on the tracks.

## Montreal Tramways Co's Fares Settled by Quebec Public Utilities Commission.

The Quebec Public Utilities Commission gave judgment, Sept. 20, on the appeals of the Montreal Tramways Co., and of the municipalities served by it, against the schedule of fares fixed by the Montreal Tramways Commission on June 21, full particulars of which were given in Canadian Railway and Marine World for August and September.

The principal changes made by the Public Utilities Commission are that transfers are to be issued free in the uni-

form tariff territory, instead of being charged for at the rate of 1c, as fixed by the Montreal Tramways Commission, except to school children and between 5 and 5 a.m. on week days only. So-called workmen's tickets have been restored by the Public Utilities Commission and are to be sold 6 for 25c and to be good between 6 and 8 a.m. and 5 and 7 p.m. Certain modifications are also made in the schedules outside the uniform tariff territory.

### COMPARISON OF THE TWO TARIFFS.

Following is a comparison of the tariff as fixed by the Montreal Tramways Commission and of the revised tariff as settled by the Public Utilities Commission. The uniform tariff territory, referred to hereunder, comprises the City of Montreal and the cities or towns of Maisonneuve, Westmount, Outremont, Verdun, St. Laurent, Mount Royal, that portion of the parish of St. Laurent and of the municipality of Cote St. Luc lying to the east of the line of the company running from Snowdon station to Cartierville, including the land occupied by the said line.

#### TRAMWAYS COMMISSION'S SCHEDULE.

- (a) From midnight to 5 a.m., 15c cash.
- (b) From 5 a.m. to midnight, 6c cash, or 5 tickets for 25c.
- (c) For school children from 5 years to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.
- (d) Transfers shall be issued free to school children specified in clause c, and to all passengers travelling on cars between 5 a.m. and 8 a.m., on week days only. At all other times, a transfer shall be issued to any passenger paying his or her regular fare, at a charge of 1c.

The following are the tariffs for municipalities outside the uniform tariff territory, for local traffic only:—

#### Montreal West.

- Local traffic:
- (a) From midnight to 5 a.m., 5c cash fare.
- (b) From 5 a.m. to midnight, 2c cash fare, or 6 tickets for 10c.
- (c) School children, from 5 to 16 years of age on week days only, and between 8 a.m. and 6 p.m., 1c cash fare or 6 tickets for 5c.

- (a) Day tariff, 6c cash or a ticket to be sold at the rate of 5 for 25c.
- (b) School children, a ticket to be sold at the rate of 7 for 25c.
- (c) Special day tariff of a ticket to be sold at the rate of 6 for 25c, to be good only between 6 and 8 a.m. and 5 and 7 p.m. on week days only.
- (d) Night tariff, 15c cash.

Passengers paying fares shall be entitled to a transfer free of charge.

#### Town of Lachine.

- Local traffic:
- (a) From midnight to 5 a.m., 10c cash fare.
- (b) From 5 a.m. to midnight, 5c cash fare.
- (c) School children from 5 to 16 years of age, on week days only and between 8 a.m. and 6 p.m., 7 tickets for 25c.
- (d) The above tariff will also apply to all passengers travelling from the Town of Lachine to the Western limit of the uniform tariff territory and vice versa.

- (a) Day tariff, 5c cash or a ticket to be sold at the rate of 6 for 25c.
- (b) School children, a ticket to be sold at the rate of 7 for 25c.
- (c) Night tariff, 10c cash.

The foregoing tariffs apply to all passengers travelling from Lachine to the western limit of the uniform tariff territory and vice versa.

#### Ville St. Pierre.

From the western boundary of Ville St. Pierre to the western limit of the uniform tariff territory and vice versa:

- (a) From midnight to 5 a.m., 5c cash.
- (b) From 5 a.m. to midnight, 2c cash or 6 tickets for 10c.
- (c) School children from 5 to 16 years of age, on week days only and between 8 a.m. and 6 p.m., 1c cash fare or 6 tickets for 5c.

All tariffs same as for Montreal West and to apply to all passengers travelling between the eastern and western limits of the town, but not to passengers having paid the Lachine local fare.

#### Montreal North.

- Local traffic:
- (a) From midnight to 5 a.m., 10c cash fare.
- (b) From 5 a.m. to midnight, 5c cash fare.
- (c) School children from 5 to 16 years of age, on week days only and between 8 a.m. and 6 p.m., 7 tickets for 25c.

Same tariffs as for the City of Lachine. Fare of school children will, however, be good for interurban transport as far as the Sacre Coeur Convent station.

**Montreal East.****Local traffic:**

- (a) From midnight to 5 a.m., 5c cash fare.
- (b) From 5 a.m. to midnight, 2c cash fare.
- (c) School children from 5 to 16 years of age, on week days only and between 8 a.m. and 6 p.m., 1c cash fare or 6 tickets for 5c.

**Pointe aux Trembles and Laval.****TOWN OF POINTE AUX TREMBLES.**

- (a) From midnight to 5 a.m., 10c cash fare.
- (b) From 5 a.m. to midnight, 5c cash fare.
- (c) For school children from 5 to 16 years of age, on week days only and between 8 a.m. and 6 p.m., 7 tickets for 25c.

**Interurban Traffic.**

From Laval de Montreal to western limits of Pointe aux Trembles, and vice versa:

- (a) From midnight to 5 a.m., 10c cash fare.
- (b) From 5 a.m. to midnight, 5c cash fare.
- (c) For school children, from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

From Laval de Montreal to eastern limits of uniform tariff territory and vice versa:

- (a) From midnight to 5 a.m., 15c cash fare.
- (b) From 5 a.m. to 8 a.m., 10c cash fare.
- (c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

From Pointe aux Trembles to eastern limits of uniform tariff territory and vice versa:

- (a) From midnight to 5 a.m., 10c.
- (b) From 5 a.m. to 8 a.m., 5c.
- (c) For school children from 5 to 16 years of age, on week days only, and between 8 a.m. and 6 p.m., 7 tickets for 25c.

**Extracts from Judgment.**

The Quebec Public Utilities Commission, in concluding its judgment, said:—"Should the present tariff prove inadequate at any time the fares can be raised, but, as we read the contract, they can only be lowered when the accumulated surplus reaches \$2,000,000, whereupon one-half will be for such reduction.

"We believe we have made ample allowance for all expenditure the company may be called upon to meet, and have not been more optimistic in our forecast as to revenue than the Tramways Commission. Taking the contract in its entirety, the benefit of any doubt should, in our opinion, be construed in favor of lower fares.

"It is far from an agreeable duty to a public body to increase the rates of a public utility. It is simply, however, a matter of maintaining the public utility in question, as an efficient and going concern. Urban transportation in this community is essential and it cannot be long maintained at less than cost. This has had to be recognized the world over and is a consequence of the abnormal conditions through which we are passing. In all spheres of activity, transportation among the rest, prices and rates have been increased, and we have not gone farther in this direction than necessity and the terms of the contract appear to demand."

The Chairman remarked verbally that

Same tariffs as for Town of Montreal West.

(a) Day tariff, 2c cash fare.

(b) School children, 1c cash fare or a ticket to be sold at the rate of 6 for 5c.

(c) Night tariff, 5c cash.

**TOWN OF LAVAL.**

(a) Day tariff, 3c cash fare.

(b) School children, 2c cash fare or a ticket to be sold at the rate of 7 for 10c.

(c) Night tariff, 10c cash.

Tariff applicable to persons travelling between eastern limit of uniform tariff territory to any point in Laval de Montreal.

(a) School children, the combined cash fares or a ticket to be sold at the rate of 7 for 20c.

(b) Night tariff, 15c cash.

**GENERAL.**

Day shall mean any time between 5 a.m. and midnight. Night, from midnight to 5 a.m., but nothing herein contained shall compel the company to run cars later than at present.

School children shall mean children between the ages of not less than 5 years nor more than 16 years, and fares for such shall only be good on week days and between 8 a.m. and 6 p.m.

All fares as herein provided shall apply in respect of municipalities as bounded and defined on Jan. 28, 1918.

Where not otherwise specified through fares shall be computed by adding together the local fare or fares and the uniform tariff territory fare in all cases where passengers pass from an outside municipality into the uniform tariff territory.

the Public Utilities Commission thought transfers had been abused a great deal, and they were going to take the question up with the Tramways Commission and the company, to see whether something could be done to prevent the abuses that have been in existence for some time.

The new schedule of fares goes into effect Oct. 3, and in preparation therefor, it is being advertised in Montreal papers, while the company is preparing its new forms of tickets and transfers. Under the franchise agreement tickets purchased at existing rates cannot be used after the new schedule comes into effect, but are to be redeemed by the company at the price at which they were sold. Under the new transfer plan, passengers, at the time of paying their fares, must state the first point at which a transfer is desired, and the transfer ticket will be punched accordingly. The new fare tickets will, it is said, be different from the old ones in color, and will have the value printed on the face. It is not expected that the new transfer forms will be ready for Oct. 3, and until they are, the present forms will be used.

The Sydney, N.S., Trades and Labor Council passed a resolution Sept. 10 opposing the adoption of one-man cars in the city by the Cape Breton Electric Co., and pledging itself to use every legitimate means within its power to oppose their introduction.

**Quebec Railway, Light, Heat and Power Co's Report.**

The annual meeting was held at Montreal, Sept. 10. Following are extracts from the report for the year ended June 30:

The gross earnings from operation for the year were \$1,797,852.83, against \$1,832,031.93 in 1917, a decrease of \$34,179.10. After adding miscellaneous income of \$230,088.32, there was a total revenue from all sources of \$2,027,941.15, a decrease of \$34,951.58. The operating and maintenance expenses were \$1,235,724.33, against \$1,155,969.25 in 1917, an increase of \$79,755.08. The fixed charges and taxes were \$696,909.92, leaving a net surplus of \$95,306.90.

After making provision for obsolete cars on the City Street Railway Division and portion of storage battery installed in Queen Street sub-station, there remained a total at the credit of surplus account of \$753,091.17. There was expended during the year \$243,225.48 on maintenance account, which was charged to operation, in order to maintain in a high state of efficiency the physical condition of the properties and plant of the company and its various subsidiary companies.

The assets are \$23,973,069.40, and the liabilities \$23,219,978.23, the surplus being \$753,091.17.

The directors for the current year are: Sir Rodolphe Forget, President; L. C. Webster, Vice President; C. A. Lavigne, L. J. Tarte, A. Picard, J. T. Donohue, P. Galibert, L. G. Morin, C. Donohue, T. J. Stewart and A. E. Labelle. W. J. Lynch is General Manager, and A. LeMoine is Secretary.

**One Man Cars for Saskatchewan.**—The Regina City Council has decided to apply to the Saskatchewan Government asking that the Railway Act be so amended at the next session of the legislature as to give permission to operate one-man cars on electric railways. The cities of Saskatoon and Moose Jaw are being invited to co-operate in securing the legislation. The operation of one-man cars is at present specifically forbidden—the section in the Railway Act expressly providing that all cars shall have two men in charge—and an attempt to have the section amended last year was not pushed beyond the committee stage.

**Jitney men in Vancouver.**—A fine of \$20 and costs was imposed in the Vancouver police court Sept. 12 on L. Shaw for an infraction of the city bylaw passed recently, for the elimination of jitney traffic. The cases of 16 other offenders were postponed until a later date, when it was stated fines would be inflicted. A large number of additional summonses have been issued since Sept. 12, the jitney men continuing to operate upon the advice of counsel, who has given notice of appeal.

**The Detroit United Lines,** which serve 159 cities in Michigan within 75 miles of Detroit, have been authorized by the Interstate Commerce Commission to charge 2c a mile plus a 5c fare on the street car lines in Detroit. All mileage and reduced fare tickets are withdrawn, with the exception of school tickets and children's rates.

**Montreal Tramways Co.**—The annual meeting of shareholders called for Aug. 29, was postponed to Sept. 27.

The Ottawa Electric Ry. announced Sept. 16, that it had decided to stop running night cars at 1 a.m. instead of 2 a.m. as formerly.

## The Montreal Tramways Co's Annual Report.

Following are the principal portions of the Montreal Tramways Co.'s annual report for the year ended June 30, 1918:

Gross earnings, July 1, 1917, to Feb. 9, 1918	\$4,652,747.66
Allowance under new contract and other earnings, from Feb. 10 to June 30, 1918	874,048.71
Total	\$5,526,796.37
Surplus carried over from June 30, 1917	856,149.01
Total	\$6,383,245.38
Operating expenses, July 1, 1917, to Feb. 9, 1918	\$3,148,003.78
Taxes, July 1, 1917, to Feb. 9, 1918	92,474.26
City percentage on earnings, July 1, 1917, to Feb. 9, 1918	250,509.12
Interest on bonds and loans for the year	940,242.38
Interest on debenture stock for the year	800,000.00
Dividends paid to April 30, 1918	254,637.75
Discount on bonds	223,112.00
Spent on renewals over amount carried forward from last year	106,808.15
Amount paid on account first Tramways Commission up to June 30, 1918	15,000.00
	\$5,830,787.44
General surplus	\$ 552,457.94

In the above figures the gross earnings to Feb. 9, 1918, the date of the termination of the old contract, are shown separately from the interest allowed the company under the terms of the new franchise. The gross credits amount to \$5,526,796.37, the surplus carried over from June 30, 1917, was \$856,149.01, making the total credits \$6,383,245.38. The total charges against this sum amount to \$5,830,787.44, leaving a balance to the credit of the general surplus account of \$552,457.94, a reduction from the surplus as it stood at the close of the fiscal year 1917 of \$303,991.07.

On Jan. 28, 1918, a contract was executed between the City of Montreal and the company, which was later assented to by the Quebec Legislature, granting a franchise on the Island of Montreal to the company for 35 years. Under this contract the rates of fares to be charged are to be fixed by the Tramways Commission, appointed by the Quebec Government to administer the contract, and must be sufficient to produce a revenue that will meet the allowances provided for under the said contract, viz.: operating expenses and taxes, operating profit, maintenance and renewals, 6% per annum on the amount of \$36,286,295.00, as established by the contract; 7% per annum on additional capital supplied during the continuance of the war, and for two years after its close, to be received over a period not exceeding five years beyond the close of the war; 6% per annum on working capital furnished by the company for the operation of its system; 1/2% per annum on \$36,286,295, or \$181,431.47, to cover expenses incurred by the company in procuring additional capital. A rental of \$500,000 a year to be paid to the city during the period of the contract. A sum equal to 1% per annum of the gross revenue to be paid annually into a contingent reserve fund, until such fund shall amount to \$500,000. All the portion of the gross revenues remaining after the payment of the charges above described shall constitute the divisible surplus, and shall at the end of each year be distributed as follows: To the city 30%; to the company 20%; and to the tolls reduction fund 50%. The tolls reduction fund shall be held in trust for the patrons of the company for the

reduction of tolls, and shall be administered by the commission as provided for under the contract. Whenever at the end of any year the amount in the tolls reduction fund shall exceed \$1,500,000, the commission may, and whenever the amount in said fund shall exceed \$2,500,000, the commission shall reduce the fares or tolls on the tramways system.

The company purchased during the past year a block of land on Mount Royal Ave., east of Fullum St., for the purpose of erecting suitable car barns. A contract granting the company an exclusive franchise in the Town of St. Laurent, for 36 years, was executed during the past year. The company sold a block of land in the Parish of Pointe aux Trembles, which was not required for its purposes.

The company received a general demand from its employees for an increase in wages. After many deliberations, including meetings with the Tramways Commission and the representatives of the City of Montreal, etc., it was agreed to grant a general increase to the employees.

During the past year, the company received an additional contract for machining shells, and is proceeding with the work satisfactorily.

The board decided to defer the declaration of the regular quarterly dividend of 2 1/2% on the common stock, which would have been payable on Aug. 1 last, owing to the fact that the new fares and allowances provided for under the contract had not become operative, an appeal having been taken to the Quebec Public Utilities Commission.

### Electric Railway Notes.

The Hamilton, Ont., City Council has authorized the Hamilton St. Ry. to stop its cars before crossing street intersections, instead of after passing them, as has been the practice.

The Edmonton, Alta., City Council has been invited to follow the lead of Calgary, and to grant free passes on the city's electric railway to all returned soldiers who have lost limbs.

The Regina, Sask., Municipal Ry. put in effect a reduced schedule of cars on its lines from Sept. 1 to 14, to enable 21 of its employees to join in the harvest campaign held in the province.

The London & Port Stanley Ry. has extended the use of the summer commutation book tickets to Port Stanley, Ont., to Oct. 15, and also the summer extension week end fares from London to St. Thomas and Port Stanley.

It was reported to the Hamilton, Ont., City Council, Sept. 10, that the report of the special committee on the street railway situation would be presented as soon as the reports from the city engineer and the city solicitor were received.

The Hydro Electric Power Commission of Ontario has received the last two of the 12 electric locomotives, for its Chipewewa power development project, which it ordered from C. E. A. Carr Co., Toronto, recently, and which were built by the National Steel Car Co., Hamilton, Ont.

The Calgary, Alta., City Council, on Sept. 3, fixed a 5c fare for soldiers in uniform to or from the city on the Saree line of the Municipal Ry. Notice of motion was given to ask the Dominion Government to pay a lump sum, so that the city could carry soldiers to and from camp free.

The British Columbia Attorney General announced recently that the government has decided to introduce a measure at the next session of the legislature for the appointment of a public utilities commission. The constitution of the commission, he said, will be similar to the commissions already appointed in the eastern provinces.

The Hull Electric Co. has ordered a double truck snow sweeper from Ottawa Car Manufacturing Co. It will be arranged with a specially constructed frame on the ends of the underframe, the removal of which will enable it to be used as a locomotive. The underframe will be all steel, and the cab will be of wood. Trucks, air brakes and motor equipment will be supplied, and with the exception of the air brakes, which will be installed by the builders, will be installed by the Hull Electric Co. Following are chief dimensions: Length over all as sweeper, 39 ft.; as locomotive, 24 ft.; width over all, 8 ft. 8 in.; width of cab outside, 8 ft. 1 in.; length of cab outside, 12 ft. 4 1/2 in.; distance between bolster centers, 12 ft. 6 in.

### Nova Scotia Tramways and Power Co's. Taxation.

By an act passed by the Nova Scotia Legislature in 1916, the Halifax City Council was authorized to prepare provisions amending sections 369 to 483, both inclusive, of the city charter. These sections relate to taxation within the city. As soon as the new sections were prepared and approved by the city council, they were to be submitted to the N.S. Government for approval. This has now been done, and by an order in council dated Aug. 24, the new sections have been approved, and are declared to be incorporated in the Halifax charter, and to be in full force and effect. One of the new provisions, sec. 374, deals with the Nova Scotia Tramways & Power Co. and enacts that the company, "in addition to the taxation by law imposed upon the real property owned by it, including the real property formerly the property of the People's Heat & Light Co., Ltd., and of the Halifax Gas Light Co., and the sum of 4% on the gross tolls received from the operation of its railway, and the license fee of \$1,000 imposed by sec. 33, chap. 107 of the Acts of 1895, and water rates, shall pay half yearly to the city on May 1 and Nov. 1, in each year, a sum equal to 2% on its gross receipts during the half year preceding, from the supply of electric energy and gas for lighting or power, and such sum shall constitute a lien or charge upon all the property, real and personal, and the franchises of the company, and may be collected in the same manner and with the same remedies, and at the same time, as the city's other rates and taxes; and in addition to such remedies, if the said sum remains unpaid for three months after May 1 or Nov. 1 in any year, the Supreme Court or a judge thereof may appoint a receiver of the tolls and income of the company, who shall, out of the moneys so received by him, pay to the city the amount of the said taxes then in arrear. The company shall half yearly, on or before Nov. 1 and May 1, furnish the city treasurer with a statement of gross receipts shewing the amount derived from electricity and gas respectively, verified by the oath of the superintendent or manager, and for the purpose of verifying such statement the city may, if it deems fit, examine the company's books and accounts."

# Marine Department

## Steel Cargo Steamships Building for Dominion Government.

### The 5,100 Ton Type of Steel Cargo Steamship.

Canadian Railway and Marine World for August and September respectively contained full technical descriptions of the 4,300 and 3,750 ton types of steel cargo steamships for the Dominion Government, which are to be built under the shipbuild-

lifting leads for the derrick posts.

The anchor arrangements will be as usual in this class of vessel, viz., as follows: 2 bower anchors, stockless type, 48 $\frac{3}{4}$  cwt.; 1 bower anchor, stockless type, 41 $\frac{3}{4}$  cwt.; 1 stream anchor, ex stock, 13 cwt.; 1 kedge anchor, ex stock, 5 $\frac{3}{4}$  cwt.; 210 fathoms 2 in. stud link chain and the

compound wound, coupled direct to the engine shaft. The various leads will be on the double wire system, the wiring in the engine and boiler rooms being armored and in the accommodation lead covered. Six circuits will be provided, viz.: 1, navigation; 2, wireless; 3, machinery spaces; 4, accommodation amidships; 5, accommodation aft; 6, cargo holds.

The vessels will be provided with the usual armament, as required by law, and provision will be made for defence from floating mines.

The life saving appliances will be in accordance with the requirements of the Canadian Board of Steamship Inspection, and comprise: 2 lifeboats, 24 x 7 $\frac{1}{2}$  x 3 ft.; 1 lifeboat, 20 x 6 $\frac{1}{2}$  x 2 $\frac{3}{4}$  ft.; 1 dinghy, 18 x 5 $\frac{1}{2}$  x 2 ft.; 2 lifeboats, 17 $\frac{1}{2}$  x 8 ft., and the usual lifebelts and lifebuoys.

The ships' officers will be placed in deckhouses at the forward end of the bridge deck. The deckhouses will contain 1 cabin for each officer, wireless cabin, dining saloon, pantry, baths and water closets and the usual stores. An internal stairway will lead to the captain's quarters and chart room on the upper bridge, which will be surmounted by the flying bridge and wheel house. The engineers and petty officers will be housed in side houses, abreast of the engine and boiler casings, the mess room and pantry being arranged for at the after end of the engine casing on bridge deck. A petty officers' mess room will be provided at the

Steel cargo steamship War Wizard, built for British Government by Collingwood Shipbuilding Co.

ing policy of the Minister of Marine, Hon. C. C. Ballantyne, as first detailed in Canadian Railway and Marine World for February. Following is a description of the 5,100 ton d.w. type.

The principal dimensions of the 5,100 ton type will be:

Length b.p. ....	331 ft.
Breadth moulded . . . . .	46 ft. 6 in.
Depth moulded . . . . .	25 ft. 6 in.
Draft load . . . . .	21 ft. 8 in.
Deadweight about . . . . .	5,100 tons
Trial speed . . . . .	12 knots
Complement . . . . .	45

The vessels will be of the single deck type, with poop, bridge and forecastle, straight stem, elliptical stern, and will be subdivided into 16 watertight compartments, by 7 watertight transverse bulkheads and divisions. A double bottom, 39 in. deep, with solid floors on alternate frames, will be fitted from the collision bulkhead to the after peak bulkhead, each compartment being connected in the usual way to the steam suction.

The vessels are designed on the ordinary transverse system of framing, the frames and beams being of bulb angle, spaced 24 $\frac{1}{2}$  in. apart. No side stringers will be fitted in the holds, the shell plating being increased by way of compensation. The main deck, poop, bridge and forecastle decks will be of steel sheathed with British Columbia fir decking in way of the accommodation.

The cargo hatches will be arranged for the speedy handling of bulk cargoes, and will be of the following dimensions: Nos. 1, 2, 3 and 4 hatches, 26 $\frac{1}{2}$  x 23 ft. each; after hold and reserve bunker, 10 $\frac{1}{4}$  x 18 ft. The usual pillar arrangement in the holds will be dispensed with, to facilitate loading and unloading. Each cargo hatch will have adjacent 2 collapsible derrick posts, provided with 2 derricks capable of lifting 5 tons each. The derricks to the after main hold will have a lifting capacity of 3 tons. The 10 cargo winches will be of the Clarke-Chapman type, 7 in. diameter by 12 in. stroke, 2 being placed at each hatch, one on the poop deck and one on the bridge deck. One pole mast with telescopic top mast will be fitted amidships, carrying the wireless aerials and

usual stream line, tow line, hawsers and warps. The windlass, which will be on the forecastle head, will be of the Clarke-Chapman patent grip type, working under reduced steam pressure.

The steam steering engine will be placed in a deckhouse on the poop deck. The gear will be of the patent guided segment type, having cylinders about 9 in.

Steel cargo steamship War Hather, built for British Government by Port Arthur Shipbuilding Co. The photograph was taken as the vessel was leaving Fort William on Aug. 27 with a cargo of grain for Montreal, where she was turned over to the Imperial Munitions Board.

diameter by 12 in. stroke, controlled from the navigating position in wheelhouse by telemotor gear.

The electric generating set will be located in the engine room and will have a capacity of 10 k.w. The engine will be of the single cylinder enclosed type, with cylinder 8 in. diameter by 6 in. stroke, running at about 350 revolutions a minute. The dynamo will be of the four pole type,

after end of the bridge erection, with pantry adjoining. The hospital will be located under the forecastle. In accordance with what is now recognized practice in modern cargo vessels, the seamen and firemen will be housed under the poop deck aft, in commodious compartments each accommodating two men. Separate mess rooms and stores will be provided, and all requirements such as lighting,

ventilation and sanitation will be in conformity with the British Board of Trade regulations governing the survey of masters and crew spaces. All the accommodation will be steam heated throughout.

The cold storage compartments will be at the after end of the bridge erection, with the refrigerating engine adjoining.

wood, Ont. The first keels will be laid shortly, and delivery of the first of the type is expected by June, 1919.

**Orders for Steamships.**—We are officially advised that the Marine Department has given the following orders for steel cargo steamships in addition to those mentioned in our previous issues:

Halifax Shipyards, Ltd., Halifax, N.S.,

Steel cargo steamship War Weasel, built for British Government by British American Shipbuilding Co., Welland, Ont., just prior to the launching.

The fresh water tanks will have a capacity of 2,200 gallons each, and will be connected to a distiller, having a capacity of 1,000 gallons per 24 hours.

**Engines and Boilers.**—The propelling machinery will be of the triple expansion, surface condensing type, having cylinders 25 x 41 x 68 in. by 45 in. stroke, the air feed and bilge pumps being worked from the main engine. The air pump will be 21 in. diameter by 24 in. stroke, the feed pumps 3½ in. diameter by 24 in. stroke, and the bilge pumps 3½ in. diameter by 24 in. stroke.

The main circulating pump will be of the centrifugal type, driven by an enclosed forced lubrication engine. The general service pump and feed donkey will be of the simplex type, with steam cylinders 9½ in. diameter, water cylinder 7 in. diameter, and a stroke of 18 in. The ballast pump, also of the simplex type, will have cylinders 10½ in. diameter, water cylinder 14 in., and a stroke of 18 in.

The reversing gear will be of the all round type and a separate steam engine will be provided for turning in port.

An evaporator of the Weir type, capable of supplying 25 tons of water per 24 hours, will be provided, and there will be the usual filter, heater, auxiliary condenser, drain tank, telegraphs, etc.

Steam will be generated in 3 single ended boilers 14 ft. diameter by 11½ ft. long, designed to work under Howden's system of forced draft and having a working pressure of 180 lb. a square inch.

The forced draft fan will be of the double inlet type, driven by a single cylinder open type engine situated in the engine room.

The vessels are designed to Lloyds 100 A1 class and will be built under special survey and the departmental constructors. The trials will consist of a dock trial of 4 hours duration, to be followed later by an official sea trial of 6 hours duration, with the vessels fully loaded.

Orders have been given by the Marine Department for 12 of these steel vessels, viz., 4 to Wallace Shipyards, North Vancouver, B.C.; 4 to Tidewater Shipbuilders, Ltd., Three Rivers, Que.; and 4 to Collingwood Shipbuilding Co., Colling-

wood, Ont. 2 of 8,100 tons d.w. capacity.

This makes orders for 24 vessels given to date as follows, the tonnage stated being dead weight in each case:—

	No.	Tons each	tonnage
British-American Shipbuilding Co. ....	2	4,300	8,600
Canadian Vickers, Ltd.	1	4,300	4,300
Canadian Vickers, Ltd.	1	8,100	8,100
Collingwood Shipbuilding Co. ....	4	3,750	15,000
Davie Shipbuilding & Repairing Co. ....	2	5,100	10,200
Halifax Shipyards, Ltd.	2	8,100	16,200

have the following dimensions: Length over, all 261 ft., beam 43½ ft., depth moulded, 26 ft. They will be equipped with triple expansion engines, with cylinders 18, 20 and 50 ins. diam. by 36 ins. stroke, supplied with steam by two boilers 14 ft. diam. by 10¾ ft. long, with forced draft, for a speed of about 9½ knots when fully loaded. They will be of the usual poop, bridge and forecastle design, with four hatches, four collapsible derrick posts and one mast amidships. A full description of this type of vessel was given in our last issue.

**Davie Shipbuilding & Repairing Co.,** Lauzon, Que., intends to lay the keels of the two steel cargo steamships of 5,100 deadweight tons capacity for the Dominion Government during the first half of October, and anticipates launching them about July, 1919. A detailed description of this type of vessel is given in this issue.

**Ascania Salvage Co., Ltd.,** has been incorporated under the Dominion Companies Act, with \$20,000 capital, and office at Montreal, to carry on the business of salvors and wreckers of ships and vessels of all kinds, and in connection therewith to own and operate steam and other vessels. The officers are—President, W. F. Walsh, Purchasing Agent, Halifax Shipyards, Ltd.; Secretary, H. McElliott, secretary to R. M. Wolvin, President, Montreal Transportation Co., and Vice President and General Manager, Halifax Shipyards Ltd.; and Treasurer, Jos. Leonard, chief accountant, Halifax Shipyards, Ltd. The company was incorporated with the intention of salvaging the s.s. Ascania, which was wrecked off Newfoundland earlier in the year.

**Shipbuilding and Ship Losses.**—Washington, D.C., press dispatch:—"Deliveries of completed vessels from shipyards in the U.S. during July and August, were more than enough to offset the submarine losses of the U.S. since the beginning of the war. Ships sunk aggregate 541,925 deadweight tons, while new ones put in service in the two months aggregated 610,779 deadweight tons. The total allied

Steel cargo steamship War Witch, built for British Government by Collingwood Shipbuilding Co. From photograph taken immediately after the launching.

It is said that a further order for two vessels of about 10,500 tons d.w. capacity each will probably be given Halifax Shipyards, Ltd., shortly.

**Collingwood Shipbuilding Co.,** Collingwood, Ont.—The steel steamships of 3,750 tons each, which the Dominion Government has ordered from this company will

and neutral losses during the war have amounted to 21,404,913 deadweight tons, while new allied and neutral construction has totalled 14,247,825 tons. With tonnage of enemy ships received by the allies added to this total, the net losses during the entire war period is shown to be 3,362,088 deadweight tons."

# Cargo Steamship Building in Canada for British Government.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to Sept. 8, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

Steel Steamships.		
May 18, 1917	War Dog, Wallace Shipyards North Vancouver, B.C.	4,500
July 9, 1917	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N. S.	1,800
Aug. 19, 1917	War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300

June 14, 1918	War Edensaw, New Westminster Construction & Engineering Co., B.C.	3,080
June 15, 1918	War Babine, Foundation Co., Victoria, B.C.	3,080
June 24, 1918	War Nicola, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
June 28, 1918	War Quebec, Quebec Shipbuilding & Repairing Co., Quebec, Que.	3,080
June 29, 1918	War Ontario, Toronto Shipbuilding Co., Toronto	3,080
July 5, 1918	War Huron, Fraser, Brace & Co., Montreal	3,080

Aug. 31, 1918	War Camchin, Foundation Co., Victoria, B.C.	3,080
Sept. 7, 1918	War Sorel, Quebec Shipbuilding & Repair Co., Quebec	3,080
Sept. 8, 1918	War Nanoose, Foundation Co., Victoria, B.C.	3,080

Total, 37 wooden steamships.....113,960  
Total deadweight tonnage of 17 steel and 37 wooden steamships launched, 1914-860.

**Vessel Assignments.**—It was announced at Victoria, B.C., that all wooden steamships under construction in British Columbia for the British Government, have been assigned to various firms for operation on the government's behalf. Of the 27 vessels built, or under construction in that province, 8 are said to have been assigned to English firms, and 19 to Scottish companies.

**Steamships Ordered and Launched.**—The following table shows the number of steel and wooden steamships ordered by the Imperial Munitions Board in Canada for the British Government and the number launched to Sept. 8, with the deadweight tonnage and the name of the builder in each case. The two vessels mentioned under the names of Dingwall, Cotts & Co. and the Port Arthur Shipbuilding Co., through subcontract, were being built for other owners when the general orders were placed, and taken over for the British Government. In addition to the foregoing, the car ferry steamship Leonard, 3,263 tons, was bought from the Dominion Government.

Steel Cargo Steamship War Fundy, built for British Government.

Nov. 3, 1917	War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918	War Camp, J. Coughlan & Sons, Vancouver, B.C.	8,800
Mar. 23, 1918	War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918	War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400

**British-American Shipbuilding Co., Welland, Ont.**—The s.s. War Weasel, the launching of which was mentioned in our last issue, was the first of the three steel cargo steamships to be built by this company for the British Government under order of the Imperial Munitions Board. The second one is expected to be ready for launching early in October, and the keel of the third was laid on the berth occupied by the War Weasel, immediately after the launch of that vessel.

**Canadian Vickers, Ltd., Montreal.**—The fourth launching of steel steamships since the opening of the St. Lawrence navigation, took place when the s.s. War Faith

was launched by the Governor General, Sept. 28. She is a sister vessel of the War Earl and War Duchess, both launched by the company in June.

**Collingwood Shipbuilding Co., Collingwood, Ont.**—The second of the two steel steamships ordered from this company by the Imperial Munitions Board for the British Government, was launched, Sept. 6, and named War Witch. She is of 2,900 ton deadweight capacity, and similar to the s.s. War Wizard, which was launched May 8.

**J. Coughlan & Sons, Ltd., Vancouver.**

ately after the launching, but it is not anticipated that she will be launched until early in 1919.

**New Westminster Construction & Engineering Co., New Westminster, B.C.**—The third of the 4 wooden steamship hulls under construction for the British Government, under order from the Imperial Munitions Board, was launched Aug. 26, and christened War Kitimat, by Miss Janet Gray, daughter of the Mayor.

**Polson Iron Works, Ltd., Toronto.**—The first of the 6 steel steamships ordered by the Imperial Munitions Board for the British Government, was launched Sept. 19, and christened War Taurus, by Lady Flavelle, wife of the Chairman of the Imperial Munitions Board. The building of this vessel was somewhat delayed, owing to labor troubles in some departments, which are forming the subject of enquiry by a board of conciliation. The War Taurus is 261 ft. long, 43½ ft. beam, with a moulded depth of 23 ft. She is built under British Corporation regulations, and equipped with triple expansion engines with cylinders 20½, 33 and 54 ins. diam., by 36 ins. stroke, 2,250 h.p., and supplied with steam by 2 Scotch boilers 12 ft. long by 14 ft. diam. at 180 lbs.

**Quebec Shipbuilding & Repair Co., Quebec, Que.**—The second of the 2 wooden steamship hulls, built under order from the Imperial Munitions Board for the British Government at this yard, was launched Sept. 7, and named War Sorel, being christened by Mrs. R. A. Carter, wife of the company's Managing Director.

**Quinlan & Robertson, Quebec, Que.**—The fourth wooden steamship hull built at this yard under order from the Imperial Munitions Board for the British Government was launched Sept. 23, and named War Matane. This completes the order placed with this firm.

Wooden Cargo Steamship War Tanoo, for British Government.  
Just prior to launching by Western Canada Shipyards, Ltd., Vancouver, B.C.

Government, at this yard, was launched Sept. 8, and named War Nanoo. The s.s. War Camchin, which was mentioned in our last issue as having been launched Aug. 8, was not launched until Aug. 31.

**Grant & Horne, St. John, N.B.**—The first of the two wooden steamship hulls ordered by the Imperial Munitions Board for the British Government, was launched at this yard Aug. 24, and named War Fundy, by Mrs. Carvell, wife of the Dominion Minister of Public Works. The keel of the second hull was laid immedi-

**Western Canada Shipyards, Ltd., Vancouver, B.C.**—The s.s. War Tanoo, the last of the wooden steamship hulls to be built by this company to the Imperial Munitions Board's order for the British Government, was launched Aug. 22.

**Henriette Ship Co., Ltd.,** has been incorporated under the Dominion Companies Act, with \$100,000 capital, and office at 626 Pender St. West, Vancouver, B.C., to own and operate steam and other vessels and to carry on a general navigation and transportation business.

## General Shipbuilding Notes Throughout Canada.

**Annapolis Shipbuilding Co., Annapolis Royal, N.S.,** launched a tern schooner of 1,100 tons during September, and expects to launch one of about 1,000 tons early in December. It is reported that a repair dock is under construction, suitable for handling vessels up to 5,000 tons.

**Barrington, N.S.—**Local financial interests are reported to be considering the question of establishing a shipyard at this point, to revive the shipbuilding industry

per engine rooms. Included in the deck machinery equipment are: double cylinder, two drum steam trawl winch with reversing engines; double cylinder single drum steam hoister with non reversing engines, and a steam windlass. The vessels are of the following dimensions: length over all 143 ft., breadth moulded 22½ ft., displacement 630 tons. Of the whole order, 9 vessels have been launched, and the balance will be

Co., and two are for H. C. Hansen, of Porsgrund, Norway.

**Comeauville Shipbuilding Co., Comeauville, N.S.,** has launched the schooner Ruth Hickman for I. A. Have owners. Another schooner has been laid down. She will be 112 ft. long, with a breadth of 23 ft., and a depth of 13 ft., and will be equipped with a 100 h.p. engine burning crude oil.

**Connors Bros., Blacks Harbor, N.B.—**Three trawlers are reported to be under construction by this firm, and it is said that they are to be equipped with Fairbanks-Morse oil motors of 200 b.h.p.

**J. F. Deveau, Meteghan, N.S.—**It was expected to launch a schooner during September for owners at La Have, N.S. The schooner Harold B. Cousins is under repair at this yard, prior to being handed over to New York purchasers.

**Dominion Shipbuilding Co., Toronto.—**The first vessel to be built in this company's new yards, was launched Sept. 26 and christened St. Mihiel, by Mrs. William Inglis. She is a bulk freighter of the Frederickstad type, with deadweight capacity of 4,300 tons. Her dimensions are: length over all 261 ft., breadth moulded 43½ ft., depth moulded 28 ft. 2 in. She is equipped with triple expansion engines, with cylinders 20, 33 and 54 in. dia., by 40 in. stroke, 1,500 h.p., supplied with steam by 2 Scotch boilers, each 14 x 12 ft., built by John Inglis & Co., Toronto. This vessel is being completed on builder's account, and negotiations were under way during the last few days of September for her acquirement for ocean service. In general design and construction she is similar to the steamships Angouleme and Troja built by the Thor Iron Works, Ltd., which business is now

Steamship T. P. Phelan for Canada Steamship Lines, Ltd., built by Tidewater Shipbuilders, Ltd.

where in past years many notable schooners were built.

**Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.—**At a special meeting of shareholders, Aug. 15, a resolution was passed that the company be wound up voluntarily forthwith, and Herbert Wright was appointed liquidator. This was confirmed at a meeting held Aug. 30. The company was organized in 1916 as an outcome of the agitation for increased vessel production within British Columbia for provincial needs. An order was placed with it by Canada West Coast Navigation Co. and allied interests, for 6 auxiliary powered schooners, of a comparatively new type, and these were successfully completed and placed in service, chiefly to the Antipodes. The company was subsequently given a contract for 4 wooden hulls for steamships, by the Imperial Munitions Board, for the British Government, and these have been completed, so far as the company's work is concerned, the last one, War Stikine, being launched July 27. At that launching, J. H. Price, President, stated that he could not give particulars as to the company's future, but it could be said that the yard would be in full swing again shortly.

**Canadian Car & Foundry Co., Fort William, Ont.,** as mentioned in previous issues, is building 12 mine sweepers for the French Government. They are of the single screw, steel steam trawler type, and are built to the full requirements of Lloyd's register, class 100 A1 steam trawlers, single deck with raised quarter and forecastle decks and steel deck house. The top of the boiler house and winch casing form the navigating bridge, on which is a steel house containing the captain's room and wheel house. On top of the deck house aft is a steel house for the wireless telegraph operator, with platforms at sides for lifeboats. Two pole masts of Oregon fir are fitted, the foremast stepped in cast housing on the main deck, and the main mast is housed by the deck house aft. Steam steering engines are installed in the up-

per engine rooms. Included in the deck machinery equipment are: double cylinder, two drum steam trawl winch with reversing engines; double cylinder single drum steam hoister with non reversing engines, and a steam windlass. The vessels are of the following dimensions: length over all 143 ft., breadth moulded 22½ ft., displacement 630 tons. Of the whole order, 9 vessels have been launched, and the balance will be

French Mine Sweeper Navarin, built by Port Arthur Shipbuilding Co., Ltd.

**Cholberg Ship Co., Victoria, B.C.—**The laying out of a shipyard in the Mud Bay section of the old Songhees Reserve, is proceeding rapidly, the building ways having been rushed so that keels were laid during the second week of September. It is stated that four vessels will be built simultaneously, and that the company has sufficient contracts to keep the yard busy for two years. One vessel is for the Porsgrund Steamship & Sailing

Co., of which L. Dahlgren is Vice President and General Manager.

**Fauquier & Porter, Hantsport, N.S.—**The schooner Margaret F. Dick, which was launched at this yard Aug. 24, as mentioned in our last issue, for the British Colonies Transportation Co., St. John, N.B., is of the following dimensions: Keel 178 ft., breadth 39½ ft., depth of hold 18½ ft. The keel is of Douglas

fir and the frames of native spruce. The masts are of Douglas fir, which is also used in the finishing of the cabins. The vessel has a registered tonnage of 1,012 44 100. The builders have a second schooner of the same model and tonnage on the stocks, for completion in November, and they have also laid the keel of a three masted schooner with keel of about 142 ft.

**Foundation Co.,** Victoria, B.C., has taken over the yard recently operated by Cameron-Genoa Mills Shipbuilders, Ltd., at Point Ellice, and this is now known as the company's no. 2 yard. The keels of 2 wooden vessels for the French Government were laid at this yard, Sept. 9, and the keel of one similar vessel for the same owners was laid on the same day, at the no. 1 yard. These are the first of an order for 20 such vessels for the French Government, and it has been announced that all the vessels will be fully equipped in the company's own yards.

Press reports state that this order has been secured on a cost plus percentage basis, and that there is some local resentment at this, as it leaves the building company open to offer higher wages, and pay more for materials to secure delivery, thus unsettling the labor market, and generally placing other builders at a disadvantage.

**H. T. LeBlanc,** Wedgeport, N.S.—It was expected that the trawler, which is being built at this yard for J. N. Rafuse & Sons, Conquerall Bank, would be launched about the last week in September. She is 157 ft. long overall, 27 ft. beam and 13 ft. deep. A contract has been entered into for the construction of another similar vessel, about 6 ft. longer, and the keel has been laid.

**Wm. Lyall Shipbuilding Co.,** North Vancouver, B.C., has an order from the French Government for 8 wooden steamships of 1,500 tons deadweight capacity. They will be 205 ft. over all and well decked, will be equipped with 550 h.p. twin engines and will be delivered by June, 1919.

**A. McKenzie,** River John, N.B.—Work is progressing on a 600 ton schooner, and it is expected that it will be ready for launching early in October.

**C. H. McLennan,** River John, N.B.—A schooner of 125 tons was launched at this yard, Aug. 31, and the keel of another of larger size has been laid.

gross and 345 tons register, and is classified with Bureau Veritas with rating for 12 years. She is reported to have been sold to the French Government.

**Meteghan, N.S.**—The tern schooner Scotia Bell, which was launched recently, is equipped with a bulldog engine of 8 h.p. and patent anchors. She is 414 tons

**John L. Mullen Construction Co.,** Prince Rupert, B.C.—The leasing of the Grand Trunk Pacific Ry. floating dry dock and plant at Prince Rupert, B.C., for a term of years, was mentioned in our last issue. We are advised that the lease covers the entire premises, and in addition a sufficient area adjoining the dry dock and shipbuilding plant property, for the laying down of five ways. It is said that it is not the company's intention to utilize the ship shed, which is ready for wooden vessel building, until the steel shipbuilding work is fully organized and in operation.

**W. Naugler,** Bridgewater, N.S., is building a schooner similar to the one named William Naugler, launched by him recently.

**New Westminster Construction & Engineering Co.,** New Westminster, B.C., is reported to have an order from the

French Government for 5 wooden steamships of 1,500 tons deadweight capacity.

**Nova Scotia Shipbuilding & Transportation Co.,** Liverpool, N.S., is building on its own account, two small three masted schooners of about 200 tons net. The first is expected to be ready for sea by Oct. 15, and the second by Dec. 1. Since this company commenced business about 18 months ago, exclusive of the above mentioned two vessels, it has built five vessels, which is claimed as a record for Nova Scotia yards. The first vessel, the Bianca, was launched in June, 1917. She is a three masted vessel, equipped with semi Diesel oil burning engine of 100 h.p., and 700 tons deadweight capacity. She was torpedoed by a German submarine in Aug., 1918, and abandoned by the crew. She, however, did not sink, but was brought into port and is being made ready for sea again. The Ruby W. was launched Nov. 10, 1917, and is of the same model as the Bianca. She was built for W. Wrightson, of Alabama, and later sold to Newfoundland parties. The Abomama was launched Mar. 21, for Peter Yee Wing & Co., Sydney, Australia, and arrived there recently after a successful trip. She is of 800 tons and equipped with auxiliary power. The two masted fishing vessel Sadie Knickle, owned in Lunenburg, N.S., 100 tons net, was launched May 15, and on Aug. 5, the auxiliary powered schooner James G. Joy, 900 tons deadweight capacity, was launched for Job Bros., St. John's, Nfld. H. A. Frank is Managing Director of the company, and J. S. Gardner is master builder.

**Pacific Construction Co.,** Coquitlam, B.C., is reported to have an order from the French Government for 2 wooden steamships of 1,500 tons deadweight capacity each.

**The Quebec Shipbuilding & Repair Co.,** Co., Quebec, Que., is reported to be negotiating with foreign interests for the building of wooden steamships, of a somewhat similar type to those it has built for the British Government through the Imperial Munitions Board. The company is building a 700 ton schooner, similar to the M. P. Connolly, which was wrecked near Sable Island, Aug. 19, when on her maiden voyage.

**Quebec, Que.**—A press report from Quebec states that T. M. Kirkwood, formerly Managing Director, Three Rivers Shipyards, Three Rivers, Que., was in Quebec recently to promote the organization of a shipbuilding company with a capital of \$30,000,000, to carry out a contract for thirty 5,000 tons wooden steamships in Quebec. This is not correct; the facts are that Mr. Kirkwood has addressed a letter to the Quebec Board of Trade, giving his views on a number of requirements necessary to develop the port to its full capacity, amongst them being the establishment of a wooden shipbuilding plant, and the construction of a number of wooden steamships for handling grain and other commodities. He also suggests that as the Dominion is primarily interested in shipping from Canadian ports, it should be possible for it to guarantee the securities of a company to carry out the scheme. There appears to be nothing tangible in the scheme, and there is little or no prospect of the Dominion Government undertaking the guarantee of securities of this nature. The Government's shipbuilding programme is already laid out, and deals with steel shipbuilding only, it having been definitely decided that it will not built any wooden steamships.

**Southern Salvage Co.,** Liverpool, N.S., launched the schooner Drallim Aug. 27. Her dimensions are: length 133 ft.,

breadth 33 ft., depth 12½ ft.; tonnage, 440 gross, 379 net. She is classed with Bureau Veritas for 12 year rating, and is owned by the builders.

**Tidewater Shipbuilders, Ltd.,** Three Rivers, Que., is building an engine and boiler shop 250 x 100 ft., which will be equipped with up to date motor machinery. Contracts have been entered into for building of 6 engines of 2,500 h.p. each for the 5,100 ton type of steamship to be built in Canada for the Dominion Government, and also for 24 engines of 275 h.p. each for the wooden steamships under order with the Davie Shipbuilding & Repair Co., Lauzon, Que., for the French Government. It is possible that engines will also be built by this company, for the vessels which will be built for the Dominion Government by Halifax Shipyards, Ltd., with which it is intimately associated.

**Toronto Shipbuilding Co.,** Toronto, has a contract from French interests for the construction of 10 wooden steamships of 1,000 tons each, to be built within 12 months.

**Tulk, Flett & Co.,** St. George's, Nfld., launched a schooner early in September. She is 490 tons gross, with a deadweight capacity of about 800 tons, and is equipped with auxiliary power.

**Union Shipbuilding Co.,** Port Union, Nfld.—The 400 ton schooner Nina L. C. was launched Sept. 6 and was christened by Hon. W. W. Halfyard, Colonial Secretary. This vessel, which is the second one of the type turned out by the builders, will be ready for her first cargo of fish early in October.

**Wallace Shipyards, Ltd.,** North Vancouver, B.C.—The two additional shipbuilding berths at this yard are practically complete, with the travelling cranes in place. Railway tracks run between the berths, with complete facilities for handling all material.

**Western Canada Shipyards, Ltd.,** Vancouver, B.C.—C. V. Cummings, who returned to Vancouver from the east recently, announced that the company has concluded a contract with the French Government for 5 wooden vessels of about 1,500 tons each, and that everything was in readiness at the yards for the commencement of the construction.

**The Maritime Wrecking Co. Ltd.,** which has been brought into prominence recently by the resignation of James Carruthers from the chairmanship of the board of Halifax Shipyards, Ltd., on account of his objections as stated in Canadian Railway and Marine World for September, was incorporated under the Dominion Joint Stock Companies Act, Dec. 29, 1917, with an authorized capital of \$1,000,000, of which \$300,000 is said to have been subscribed and \$250,000 paid in. The directors are: President, R. M. Wolvin, Montreal; Vice President, F. H. Markey, K.C., Montreal; Secretary, F. S. Isard, Treasurer, Canada Steamship Lines Ltd., Montreal. Other directors: W. W. Skinner, solicitor, Montreal, and J. T. Reid, Sarnia, Ont. The Treasurer is W. E. Burke, Director and Assistant Manager, Canada Steamship Lines, and the Assistant Secretary is W. Crawford, Secretary, Montreal Transportation Co. The head office is at 14 Place Royale, Montreal, with local office at Halifax.

**S. & S. Transportation & Towing Co.,** Ltd., has been incorporated under the British Columbia Companies Act, with \$10,000 capital, and office at Vancouver, to own and operate steam and other vessels, and to carry on a tug owning and general navigation business.

## Suggestions for Suppression of Canal Accidents.

C. H. Clark, Newmarket, Ont., wrote the Toronto Globe recently as follows:—"How long is this reckless disregard of 'safety first' to continue? On Aug. 10 the s.s. Canobie entered lock 8, Welland Canal, and struck the two head gates and carried them away, doing considerable damage, besides delaying navigation, which is of the utmost value now. On Aug. 16 the s.s. Pawnee carried away the head gates of lock 12, Welland Canal, also 6 ft. gates, drowning the lock tender and doing heavy damage to the gates, and still more to those interested in the shipping of grain, iron ore, coal, lumber, etc.

"If this regard for 'safety last' in place of 'safety first' continues, it will not be long before German enemies and sympathizers will have steamers by 'mistake' run into many other gates in different locks of the Welland Canal and Sault Ste. Marie Canal locks and gates.

"Safety first' above all other considerations, and at any expense, should be held to for the protection of all canals, locks and gates, also of river navigation, and for the prevention of any vessels swinging across the channel and blocking navigation, as the s.s. Clemens Neiss did on Aug. 13, going out of West Neebish channel. 'Safety first' should demand all vessels to stop, say 500 to 800 ft., before reaching any lock, and make vessel owners pay for government tugs to place them inside of the canal lock.

"Soldiers guard the canal for 'safety first' against the enemy from attack. But no one guards the locks and gates against the possible enemy on board the vessel, who by 'mistake' may smash into the gates, doing damage in stopping navigation, which would result in the loss of millions of dollars, especially in the autumn. The breaking of the Sault Canal locks in the autumn would make an awful mess."

One of the foremost marine authorities in Canada, who was asked by Canadian Railway and Marine World for his opinion in regard to the letter republished above, has favored us with the following:—"The correspondent is so evidently ignorant of the real conditions on the canals that the letter scarcely requires an answer. Doubtless, however, there are many good citizens equally ignorant and it will do no harm to throw some light on the real facts.

"The suggestion is made that all vessels should be required to stop, say 500 to 800 ft., before reaching any lock, and vessel owners should be made to pay for government tugs to place them inside of the canal lock. This suggestion could not have been made by any one who had seen an ordinary full canal sized steamship in one of the ordinary sized locks. She fits much as a piston would fit a cylinder, and she was built to do so, so as to have the largest possible carrying capacity. Vessels of this size do not run much risk of causing damage to the locks, or their gates, as they are retarded by water pressure to such an extent that they could not very well strike the head gates. Furthermore, the vessel is placed in position in the lock, not by manoeuvring with its own engines, but by the use of cables and winches.

"If the list of accidents is examined, it will be found that most of the trouble is caused by the older class of smaller wooden steamboats, which have considerable freedom of action and readily reach the head gates, and may get into trouble

if they are not managed with caution. At the same time, the proposal to have these steamboats placed in the lock by a government tug would only be practicable where both steamer and tug were small enough, and if the government provided the tugs—which, by the way, it does not. The Globe correspondent might much better have suggested the method adopted with reference to certain barges which have no motive power. Many of them make their entry, and lock through, by the use of their lines, leaving the tug or towing steamboat to pass through separately. To apply this rule generally to all steamboats would necessitate provision by the government of much better appliances and of many men to receive and handle lines from the ships. At one time provision was made on the Cornwall Canal for pulling steamships through by electric power, but it was universally condemned and was finally abandoned.

"The Globe correspondent should understand that the accidents occur when a steamboat comes in contact with the head gates, as will appear from the cases cited and from any other reports. These gates, when closed, do not run straight across the canal, but meet at an angle, the apex of which is against the higher water above the lock, giving the necessary stability. If one gate is pushed very slightly up against the head of water, the other gate loses its support and falls into the lock under pressure of the water above. It is the slight displacement of one head gate, to the extent of a few inches, which causes all the trouble. A remedy for this can readily be found and many devices have been applied in different localities. Sometimes chains are attached to hold the gate in any event. Sometimes a bracket projects at the edge of each gate and rests against the other gate, even if the other is slightly displaced. The Dominion Marine Association has repeatedly urged that some such device should be installed on every pair of head gates. No doubt the government's failure to take action at the Welland Canal has been due in part to the desire to avoid accidents on a canal which was to be replaced by the new ship canal, work upon which has now been stopped during the war. Any new canal now constructed will undoubtedly have provision for safeguarding the head gates. The Panama Canal is protected, and the new Welland Ship Canal, it is understood, will also be properly safeguarded by one or other of the devices suggested.

"The trouble is not only one which could be remedied or avoided by the canal authorities, if proper provision were made for the expense, but the steamboat's difficulty is vastly accentuated in many cases by currents developed in the canal by the use of canal water for power purposes or otherwise. If the Globe correspondent watched a steamboat enter certain locks I have in mind he would marvel at the skill, nerve and good judgment displayed by the master in using his helm and his engines to counteract adverse conditions which a navigator should never be expected to have to contend with in a canal. Some of the locks are well known danger points, and many a good ship bears evidence of this in damaged plates and frames on her port or starboard bow, as well as further along her sides. This question of by-washes and currents in the canals is one constantly discussed, and the development of these currents is constantly protested against by vessel own-

ers. The Globe correspondent might take a hand in the good work of endeavoring to protect the canals for their natural purpose, that of facilitating navigation."

## Investigation into Shipbuilding Employes' Wages, Etc. in Quebec.

Canadian Railway and Marine World for September contained the Dominion Government's order in council appointing a commission to enquire into conditions, wages, etc., of shipbuilding employes in the Province of Quebec. The commission held sittings during August, and heard evidence regarding disputes which had occurred at shipyards in Montreal, Quebec, Levis, Three Rivers and Sorel. The result was that an agreement was drawn up, providing that from Sept. 1 until the conclusion of the war, there shall be a sliding scale of pay, according to the cost of living, a 9 hr. day instead of a 10 hr. day, and payment of time and a half for overtime, and double time in certain cases. Regarding the sliding scale, it is provided that after Feb. 1 1919, the scale of pay shall be revised in accordance with any increase or decrease that has taken place in the cost of living during the preceding year, as may be shown in the official tables published by the Dominion Labor Department. All disputes arising out of the agreement are to be referred to arbitration without any halt in vessel construction.

This agreement it is announced, has been adopted by Fraser, Brace & Co., Montreal; Davie Shipbuilding & Repair Co., Lauzon, Que.; Quebec Shipbuilding & Repairing Co., Quebec, and Quinlan & Robertson, Quebec, and agreements are stated to have been signed with the employes of these firms covering the points named. It is expected that similar agreements will be signed shortly by other shipbuilding firms in the province.

## Dry Dock Tariff for Prince Rupert, B. C.

The Governor General in council has approved an amended tariff in connection with the floating dry dock at Prince Rupert, B.C., effective from Apr. 1, 1918, to the end of the war. The rates are:—

Merchant vessels (steam) on gross registered tonnage.

Merchant vessels (sailing) on net registered tonnage.

Warships on displacement.	First day.	Lay days.
Tonnage.		
Up to 1,500 tons	\$300.	\$100.
1,500 to 3,999 tons	.20 per ton	.10 per ton
4,000 to 5,999 tons	.16 per ton	.08 per ton
Over 6,000 tons	.14 per ton	.08 per ton
Minimum charge for use of one small section separately.....	\$100.	\$35.

Swiftsure Steamship Lines, Ltd., has been incorporated under the Dominion Companies Act, with 1,000 shares of capital stock, without nominal or par value, provided that it shall carry on business with a capital of \$24,000, and with its offices at Montreal. The objects include the owning and operation of steam and other vessels, and the conducting of a general transportation and trading business. The company is to be deemed to be a private one, under the provisions of the Companies Act.

Reid East Coast Salvage Co., Ltd., has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital, and office at Halifax, N.S., to carry on a general salvage and wrecking business, and to engage in shipbuilding and transportation.

## The Concrete Steamship Faith's First Voyage.

The concrete steamship Faith, 320 ft. long, 44 ft. 5 in. wide, and 30 ft. deep moulded, left San Francisco on Wednesday, May 22, with a cargo of salt and copper ore, bound for Seattle and Tacoma, Wash., and Vancouver, B.C. The draft forward was 21 ft. 10 in. and aft 23 ft. After rounding Point Reyes in the afternoon she encountered strong head winds with considerable sea, to which she responded very well, although a good deal of water was shipped on deck. On Thursday afternoon the wind having increased in violence and the ship shipping seas all fore and aft and making about 2 knots an hour, the captain wore ship, running back to shelter cove until the storm abated.

Left shelter cove at 4 a.m. on Friday, and shortly afterwards ran into a gale; the ship was pitching heavily, but pounded rather hard, due probably to shape of forward under body. This continued all day and during the night, when the gale was at its height, and which the captain estimated to have a velocity of 60 miles an hour. During the day the vessel was taking seas over forecastle and all fore and aft, but responded well to these head seas, much in the manner of a steel vessel.

On Saturday the wind had fallen considerably and on the afternoon of that day the gale had subsided, which gave the opportunity of removing a hatch cover from holds 1, 2 and 3 and examining the vessel as far as the cargo permitted. It was then observed that the deck slab was cracked in several places in way of hatchways 1, 2 and 3 under the winch seatings, the cracks being more extensive in way of no. 2 hatchway. The cracks extended right through the slab, and evidence of slight leakage could be seen on underside, and were confined in extent to the area between the hatchways and under the winches. Small hair line cracks were also observed in the inside surface of the radius corners of all the hatchways, more particularly in no. 2. A certain amount of leakage also occurred through the fastening of the wooden deck houses and other deck fittings through the slab, and also from the fender bolts along the ship's side.

From Saturday afternoon until the arrival at Seattle on Tuesday, May 28, good weather prevailed. Draft on arrival: fore, 21 ft. 3 in.; aft, 22 ft. 8 in. During the voyage the bilges were sounded every hour, day and night, and except for port side no. 1 hold, which had about 5 in. on arrival, all other bilges were dry; this leakage only amounted to about a barrel full, and in my opinion was due entirely to seepage from cargo. After unloading part of cargo, left Seattle, Thursday, May 30, arriving Tacoma same day. Left Tacoma Saturday, June 1, arriving the following day at Vancouver, where remainder of cargo was discharged. On Friday afternoon, June 7, the vessel, being empty, was subjected to a thorough examination as far as possible, outside and inside. The outside inspection showed cracks on the paint running parallel to the outer layer of reinforcing rods, particularly over the midship portion of vessel and on the port bow, probably caused by a slight movement of the slab with the force of the seas. On the inside of vessel, in addition to the cracks in deck slab previously mentioned, hair cracks were observed in the walls between upper and second deck extending from about the middle of hold 1 to middle of hold 3. These are probably shrinkage cracks and

had been under observation before the ship left San Francisco. In the lower holds, at about the center of no. 2 and 3 hatchways, on both sides, hair-line cracks were observed in the shell slab and extending across one longitudinal. These cracks showed slight working and were the only ones seen below the second deck and were probably caused by straining when laboring in a cross sea. Apart from these minor failures, the ship, in my opinion, is a success; the failure of the deck slab is due to lack of sufficient reinforcement, and owing to the winches being bolted through the cement slab without any seatings.

The deck arrangements are only suitable, in my opinion, for coastwise trade, a wooden deck house bolted through the deck slab being the only protection for the engine and boiler openings, which, in my opinion, is not enough for transoceanic service. A concrete poop enclosing these openings would be a decided improvement. At the various ports of call the vessel was visited by large numbers of people representing the various shipping and shipbuilding interests, and their criticism on the whole was favorable to this type of construction.

On board the vessel also for the purpose of getting information were: Allan McDonald, the designer; Mr. Nicolsen, the builder; Prof. R. McMillan and his assistant; H. S. Loeffler, representing the Shipping Board; Charles C. Brush, Assistant Engineer, Bureau of Lighthouses.

Prof. McMillan had a number of his strainograph instruments placed around the midships of vessel, the cargo being so arranged that these were accessible at all times during the voyage, access to them being obtained through a ventilator to no. 2 hold. He informed me that the greatest stress registered during Friday's gale was only 8,000 lb. (that is, between hogging and sagging), on the indicators placed on the underside of deck, and the indicators on flat of bottom registered about three quarters of that amount.

Following is a copy of some of the observations made by Mr. Brush: "Established sight lines fore and aft, reading 0 in still water; passing up through Golden Gate vessel showed slight hog of  $\frac{1}{4}$  in. port and  $\frac{3}{8}$  in. starboard, and the greatest deflection taken during the voyage between extreme hogging and sagging was  $\frac{7}{8}$  in., in a length of 180 ft., which is about one-third of what a steel ship would show under similar conditions."

**Responsibility for Accidents in Panama Canal.**—The rules for the operation and navigation of the Panama Canal have been amended providing that the master of a vessel in canal waters, except while the vessel is being passed through the locks, shall be charged with the safe handling and proper navigation of the vessel, the pilot being considered to be on board solely in an advisory capacity. Masters of vessels must abide by the canal rules as interpreted by the pilot. No claim against the Panama Canal for damages, on account of injury to a vessel or its cargo while in canal zone waters, arising from the operation of the canal, other than the passing of the vessels through the locks, shall be allowed unless it shall be determined by the Panama Canal Governor that such injury was due to negligence or want of care on the part of canal agents or employees, and there shall be an appropriation available for the payment of such claim.

## Wreck Commissioner's Judgment.

Enquiry has been held, and judgment delivered in connection with the following casualty:—

### Stranding of the s.s. Afghan Prince.

Held at Sydney, N.S., Sept. 12, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Lieut. H. C. Owen, R.N.R., and Capt. A. J. Morrison, as nautical assessors. The court came to the conclusion that the vessel was provided with all necessary instruments, and efficient compasses with little deviation, which were checked in a careful manner whenever opportunity offered. From the time the vessel left Hampton Roads, until she reached Canso, she was navigated carefully and frequent casts of the lead taken, and a chain established when off Canso which was passed at a safe distance. The weather was fair as regards sea and winds, but was foggy at intervals. After leaving Canso, a course was set which would have led clear of all points of land, but which the court is of opinion was too fine, especially when the master was working on a large scale chart, and had never navigated these waters before. Though he recognized there was a westerly set, an allowance being made to offset its possible effect, the court feels that when he obtained a depth of 17 fathoms, ordinary prudence demanded that the vessel should have been turned seaward and her half speed brought to slow, and she should have been navigated carefully until 40 or 45 fathoms had been obtained, and then the former course resumed. From the evidence of the chief officer it was gathered that there was some nervousness on account of submarines, and that the hugging of the coast was due to this and caused the master to err gravely in judgment, and prevented him from exercising that prudence he had shown between Baltimore and Canso. The Admiralty orders may be to navigate close to the coast, but the court is under the impression that there is a proviso, viz.: consistent with safe navigation. In ordinary circumstances the court would have dealt with such a case in no lenient measure, but in view of conditions existing, the dread which must exist in one's mind of meeting with an enemy ship, which must upset somewhat those in command, it felt that in this instance, taking into consideration the care exercised in navigating up to Canso, and the neat method followed in entering details in the log books, the watchfulness of the actions of the compasses, some consideration was deserved, and it therefore reprimanded the master severely, and did not deal with his certificate, cautioning him as to the future. The court suggested that the Admiralty enclose within the folios handed to shipmasters, some sectional charts of the coast which they are to frequent, especially with those they are called upon to sail for the first time.

**Lafayette Steamship Co., Ltd.**, has been incorporated under the Dominion Companies Act, with \$100,000 capital, and office at Montreal, to build, own, operate and deal in steam and other vessels of every description, and to carry on a general business as common carriers.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for August, as follows:—Superior, 602.42; Michigan and Huron, 581.79; St. Clair, 575.93; Erie, 572.64; Ontario, 246.43. Compared with the average August levels for the past ten years, Superior was 0.20 ft. below; Michigan and Huron 0.95 ft. above; Erie, 0.04 ft. below, and Ontario 0.22 ft. below.

## Shipbuilding Costs at the Pacific Coast.

An Ottawa press dispatch of Sept. 24 said:—Shipbuilders on the Pacific coast, claiming that the conditions under which they operate are exceptional, want more money for building government ships, and a delegation interviewed the Minister of Marine today about it. The builders representing Vancouver and Victoria yards state that they cannot satisfactorily compete with Seattle at the scale fixed, as higher rates are being paid in the U.S. They want a better figure than the regulation contract specifies.

Another Ottawa dispatch of Sept. 25 said:—"The Minister of Marine, when interviewed regarding government orders placed with the British Columbia shipbuilders for steel ships, stated that it was not a fact that steel ships similar in size are being built in Seattle at a higher cost than at Vancouver, and that, as a matter of fact, the U.S. Government is getting steel ships, somewhat similar in size and equipment at a lower finished cost than the Canadian Government is getting from the B.C. steel shipbuilders."

## Australia's Shipbuilding Programme.

Realizing the imperative need of increasing its ship tonnage, to provide for transportation needs both during and after the war, the Australian Government has embarked upon a programme whereby from 35 to 40 vessels will be added to the Commonwealth-owned fleet of steamships within the next two years, and the Victoria State Government's shipbuilding yards at Williamstown have been taken over. On account of the great distance from European markets, the British dominions of the Antipodes are handicapped in the exchange of products with the shipping crisis as acute as it is at present. It has been recognized by Australia's statesmen that one of the most effective forms of aid to the empire lies in providing a large addition to the tonnage of the country's merchant marine.

Besides constructing ships with all possible speed, 61 vessels have been placed at the Imperial Government's disposal. This includes 26 ships, engaged in the Australian coastal and eastern trade, 8 in New Zealand trade, 22 oversea ships in the Australian service, and 5 vessels under the Commonwealth's control.

The labor difficulties in connection with the shipbuilding scheme have been overcome, although at one time they threatened to become insurmountable. Practically all the unions connected with the manufacture of the vessels have signed agreement providing for continuous operations, the dilution of labor and piece-work.

The additions to the Australian fleet comprise: Two standardized steel ships, steam, of 5,500 tons, being built in Williamstown yards, Victoria; 6 others are planned for, which will be of the same or greater tonnage.

Six ships of the same pattern as those being built at Williamstown, which will be constructed at Walsh Island, New South Wales.

Fourteen first-class wooden ships of 3,200 tons, building in the United States, 4 equipped with Diesel engines, and the others with steam. Two of these have been launched, and the others are expected to reach Australia this year. This order was placed in June, 1917, but delivery was delayed by labor troubles, lack of materials, etc.

One steel ship to be built by a private firm in South Australia. This order may be extended to 2 vessels.

Two steel ships at Devonport, Tasmania.

Fourteen wooden vessels, 6 of 2,600 tons and 6 of 2,300 tons. It is believed that a company has been formed with a large capital, possibly £1,000,000, to build some of the steel or wooden ships in Tasmania.

An Ottawa report says that at least one Nova Scotian vessel will, in all probability, be purchased by the Australian Government at an early date. As it is impossible to obtain adequate supplies of wire rope and the favored hemp sail canvas from the United States, the attention of Canadian manufacturers of these articles is directed to the development of Australian shipbuilding as an outlet for their products.

## St. Lawrence Power Dam Project.

The International Joint Waterways Commission has granted permission to the St. Lawrence Power Co., to place a dam south of Long Sault Island, in the St. Lawrence River, near Massena, N.Y., under certain conditions, and as a war necessity.

The Dominion Government in its arguments against the proposal, urged the clause in the Ashburton Treaty of 1842, whereby the channel directly in question south of Long Sault Island was expressly declared to be for all time, "equally free and open to ships, vessels and boats of both nations." It was argued that in view of this, the general terms of the treaty of 1909, under which the commission secured its jurisdiction, could not have sufficient force to enable it to permit a dam across the channel, and that the parliaments of the two countries alone could act. The commission, however, was so impressed with the U.S. Government argument, to the effect that more aluminum must be manufactured, and that this proposal affords the readi-

est means, that the order was granted, subject to substantial restrictions, which may or may not go so far as the Dominion Government desires. The order also provides for Government ownership and control. Representatives of the Dominion Government visited Washington recently to discuss the matter, and to establish a fair understanding.

## Atlantic and Pacific Ocean Marine.

The Norwegian s.s. Bergsdalen was torpedoed and sunk by a German submarine recently, about 120 miles south of Cape Race, while bound in ballast, from France to Baltimore, Md.

Canadian Pacific Ocean Services' s.s. Lake Manitoba, which was burned at the Imperial Oil wharf at Longue Pointe, Montreal, at the end of August, is considered a total loss. The only part of the hull which escaped damage is the double bottom. The fire originated in the boiler room, and the heat engendered melted a lad pipe, through which oil was being taken aboard.

The Hudson's Bay Co.'s ship, Pelican, which has been a regular caller at Montreal for several years, is, according to reports, to be transferred to other waters. This vessel, of the corvette type, was engaged in Mediterranean waters in the Egyptian wars of the early 80's, and was purchased from the British Government by the Hudson's Bay Co. She is bark rigged and equipped with auxiliary steam power.

Canadian Pacific Ocean Services' s.s. Missanabie was reported, Sept. 10, from New York, to have been torpedoed, while west bound for the United States. She had been engaged for some time in conveying U.S. troops to European points, and was returning to the U.S. for that service. She was built at Glasgow, Scotland, in 1914, for the one class passenger service between England and Canada, and was 12,469 gross tons, 500 ft. long, 64 ft. beam and 38 ft. deep, with a speed of 17 knots.

## Grain Statistics for Crop Year 1917-1918.

The following statement, prepared by the Board of Grain Commissioners, shows the total quantities of each kind of grain shipped by vessels from Fort William and Port Arthur during the crop 1917-1918, according to the ports at which the car-

goes were discharged. In addition to the figures given below, 3,600,056 lb. of sample mixed grain were shipped to Canadian ports, and 1,161,598 lb. of mixed grain and 45,345 tons of elevator screenings were shipped to U.S. ports.

Grand total . . . . .	99,729,858-50	17,842,109-05	5,028,969-44	3,331,542-40	63,585-14

The Japanese s.s. Canada Maru, which went ashore near Cape Flattery, recently, and which was eventually floated and taken to Esquimaux for repairs, was expected to clear from the dry dock about the end of September. It is stated that the repairs include the reconstruction of the bottom from the stokehold forward, the removal, straightening and replacing of nearly all the frames, and several new plates. The contract was placed with Yarrows, Ltd., and is reported to amount to about \$500,000.

### Maritime Provinces and Newfoundland.

The Newfoundland Steam Screw Tug Co., Ltd., St. John's, Nfld., is in liquidation, with R. G. Rendell and W. G. Strong as liquidators.

The Naval Service Department has awarded a contract for the erection of two large coal handling bridges of the travelling type with clam shell buckets at the Government dockyard at Halifax, N. S., to the Dominion Bridge Co.

The Halifax Trading & Sealing Co.'s s.s. Seal has been sold to Newfoundland parties. She was built at Glasgow, Scotland, in 1911, and is screw driven by engine of 85 n.h.p. Her dimensions are: length 175 ft., breadth 22.6 ft., depth 12.3 ft.; tonnage 608 gross, 277 register.

Nova Scotia Steamships, Ltd., announces that at the request of the Canadian Government Railways management, it has decided to establish a steamship service between Halifax, Yarmouth and Boston, in connection with the service being operated between Halifax, St. John's, Nfld., and New York.

The s.s. Robert G. Cann completed an overhauling and repairing at Meteghan, N.S., early in September, and replaced the s.s. Keith Cann on the St. John-Yarmouth run. The latter vessel is being overhauled, and when this has been done, she will return to her own route, and the Robert G. Cann will take the Canso-Mulgrave route. Hugh Cann & Sons, who operate this service, chartered the s.s. Edna R. as a relief vessel.

Navigation of East River, Pictou County, N.S., from Pictou harbor to Trenton, has been improved by dredging a channel 150 ft. wide by 21 ft. deep from Pictou River to Narrows Point, and 15 ft. deep thence to Trenton. Above Shipyard Point, a turning basin has been dredged in front of Trenton, and a lock has been built through Stonehouse Point (Narrows Point), but it is not yet in operation. When it is in operation, it will raise the river level, so that a depth of 21 ft. will be available.

The s.s. Kite, owned in Newfoundland, was driven ashore at Point Rosier, on the Gaspé coast, Que., recently, and is reported to be a total loss. She was bound from Fox River, Que., to Gloucester, Mass., with a cargo of fish. She had been used for some time along the northern and western coasts of Newfoundland, and for the Labrador mail service. She was built in Germany in 1873, her dimensions being: length 117 ft., breadth 26 ft., depth 14 ft.; tonnage, 280 gross, 190 net.

The Reid Newfoundland Co. issued a notice recently that, owing to a strike at Port aux Basques, Nfld., it would endeavor to forward all freight via North Sydney and Port aux Basques, but reserved the right whenever circumstances in the company's opinion required it, to forward freight originally routed via North Sydney and Port aux Basques and

designated steamships, by way of Louisbourg, collecting extra charges over the Sydney and Louisbourg Ry., and also reserved the right to forward freight by any steamship owned or chartered by the company from North Sydney or Louisbourg direct to St. John's or Newfoundland ports other than Port aux Basques.

### Province of Quebec Marine.

The Dominion Public Works Department received tenders, Sept. 18, for the construction of a floating pontoon for the wharf at Ste. Anne de Chicoutimi.

The Ogdensburg Coal & Towing Co., Ltd., has been authorized to carry on its business in the province of Quebec, with W. L. McDougald, Westmount, as its attorney.

An order in council has been passed establishing a new schedule of fares on the Quyon ferry, operated across the Ottawa River, between Fitzroy Tp., Ont., and Onslow, Que.

The s.s. Winnifredian, which ran on the rocks at St. Mary's Islands, near Quebec, recently, was released Sept. 23 by the wrecking vessel Lord Strathecona. She is considerably damaged.

The dredged channel in the Saguenay River, has been swept recently, from deep water below St. Fulgence to Chicoutimi wharf. The standard depth of 16 ft. was found throughout the entire length, and over the width of 250 ft., except at the junction of the axes of the Poste St. Martin and Valin River ranges, where some boulders have been carried into the cut by ice, and the channel been reduced to a depth of 14 ft. at the sides.

### Ontario and the Great Lakes.

The Pittsburg Steamship Co.'s s.s. Superior City grounded in a fog at the Limekiln Crossing, Sept. 23.

The Port Huron Navigation Co.'s s.s. David W. Mills, of U.S. register, after encountering heavy seas whilst en route from Ashtabula, Ohio, to Montreal, sank in Port Maitland harbor, Sept. 19, and is believed to be a total loss.

The Northern Navigation Co. is reported to have made arrangements for operating the s.s. Rapids King between Chat-

ham and Detroit, next summer. The Rapids King is owned by Canada Steamship Lines, Ltd., of which the Northern Navigation Co. is a subsidiary.

Canadian Steamship Lines' s.s. Calgarian has been sold to Brazilian parties. She was built at Port Arthur, Ont., in 1913, and is screw driven with engine of 115 n.h.p. Her dimensions are: length 244 ft., breadth 42.8 ft., depth 26 ft.; tonnage, 2,326 gross, 1,302 register.

The Minister of Public Works announced at Port Dover, Sept. 14, that he would place a contract for the improvement of the Port Dover harbor, with a firm during the following week, so that a start may be made immediately, and without the delay which would be occasioned by calling for tenders.

The Windsor City Council has renewed the Detroit & Windsor Ferry Co.'s license, which expires Oct. 2. A condition has been attached to the renewal providing that the company shall continue the same fare and service as now in effect. The council decided to withdraw the terms offered to C. Millar, K.C., Toronto, for the establishment of a new ferry service between Detroit and Windsor.

The Pennsylvania Coal & Transportation Co.'s steam tug S. O. Dixon, towing the barges Islewide and Louisa, were seized at Kingston, at the instance of the Keystone Transportation Co., Sept. 16, on a salvage claim. The tug, with its tows, was discovered by the s.s. Keyvive drifting helplessly in a gale about 20 miles off Kingston, and towed to port. The engineer of the tug had been washed off and drowned, and there was no one else to look after the engine.

The Montreal Transportation Co. has acquired the s.s. Cataract, which has had a unique career. Originally built at Hamilton, Ont., in 1882, as a steamship, and named Myles, her machinery was removed and she was converted into a schooner, and named Cataract, in 1916. Machinery has again been installed in the hull and she reverts to her former condition, maintaining the name Cataract. Her dimensions are: length 174.6 ft., breadth 33.2 ft., depth 15 ft.; tonnage, 839 gross, 451 register, and she is equipped with engine of 66 n.h.p., driving a screw.

The s.s. Natironeo, which was sunk in collision with the Detroit & Cleveland

### Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie canals during August, 1918.

		Eastbound.		
ARTICLES.		Can. Canal.	U. S. Canal.	Total.
Lumber	m. ft. b. m.	2,224	50,599	52,823

Navigation Co.'s s.s. Eastern States, in the Detroit River, June 19, 1917, is being rebuilt at Buffalo, for salt water service. She was built at Detroit, Mich., in 1892, and first named Pioneer. She was later acquired by the National Iron Co., Toronto, and renamed, and the National Steamship Co. was formed to operate her. Later she was taken over by the Merchants Mutual Line, Ltd., a subsidiary of Canada Steamship Lines, Ltd., and during the early part of 1917, was sold to A. B. Mackay Steamship Co., Hamilton.

The s.s. Ossifrage, which was operated by the Chatham Navigation Co., between Chatham and Detroit, for some time, left Chatham recently for Halifax, N.S., where, it is reported, her machinery will be transferred to another hull for ocean freight service. She was built of oak at West Bay City, Mich., in 1886, and rebuilt in 1896. She is an awning deck type with diagonal strapping on frames, steel arches, and equipped with electric light, with accommodation for freight and passengers. The machinery consists of triple expansion engines with cylinders 13 $\frac{1}{2}$ , 23 and 37 in. diam. by 24 in. stroke, 540 i.h.p. at 130 r.p.m., supplied with steam by a Scotch boiler 12 by 12 ft. at 115 lb.

The s.s. Maggie Marshall, owned formerly by the Louis Sands Salt & Lumber Co., Manistee, Mich., which was erroneously stated in press reports recently to have been purchased by Canada Steamship Lines Ltd., has been acquired by the Reid Towing & Wrecking Co., Port Huron, Mich., and will be changed to make her suitable for salt water service. It is stated that she will be equipped and utilized as a wrecking vessel at Halifax, N.S. She is an oak vessel and was built at Manistee, Mich., in 1873, and named Wm. Crippen, and was rebuilt and renamed in 1908. She is of the well deck type, with steel arches and steel boiler house. Her dimensions are, length 150 ft., breadth 30 ft., depth 11 ft.; tonnage, 365 gross, 279 net. She is equipped with steeple compound engine with cylinders 18 and 36 ins. diam. by 30 ins. stroke, supplied with steam by a Scotch boiler 12 by 12 ft. at 140 lbs. pressure.

### British Columbia and Pacific Coast.

The Department of Marine has authorized the Pacific Great Eastern Ry. to change the name of the steam tug Daring, which it has purchased from foreigners, to Clinton, the port of registration being Victoria, B.C.

The Puget Sound Navigation Co.'s s.s. Indianapolis is reported to have been placed on the Seattle-Victoria route, for operation in conjunction with the C.P.R. British Columbia Coast Service, on what is known as the triangular route.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George was hauled out on the marine railway at Esquimalt, for general overhaul, recently, and later resumed her service on the Prince Rupert and Anyox route on a semi-weekly schedule.

The North Vancouver City Treasurer reported the ferry receipts for this year to the end of August, as \$114,102.67, including over \$3,000 insurance, and disbursements for the same period as \$110,157.85, exclusive of \$8,853 for August accounts, passed but unpaid.

The Board of Grain Commissioners has made Vancouver a basic port for grain, placing it on a par, so far as grain is concerned, as other ports from which grain is shipped. It is reported that from an

examination of the first cargo of wheat shipped from Vancouver to Great Britain, the total damage amounted to four-tenths of 1%.

### Mainly About Marine People.

E. L. Cousins, Manager and Chief Engineer, Toronto Harbor Commissioners, has been appointed assistant to the Ontario Fuel Commissioner.

Sir George Gibbons, K.C., of London, Ont., a former Chairman of the Canadian section of the International Waterways Commission, who died recently, left an estate of \$897,000.

Sir Arthur H. Harris, formerly Special Traffic Representative, C.P.R., and latterly, Director of Overseas Transport, is reported to have been appointed Director General for Canada, British Ministry of Shipping.

David Richardson, second officer of Canadian Pacific Ocean Services' s.s. Empress of Russia, and who had been a master in the C.P.R. British Columbia Coast Service, died in the General Hospital, Vancouver, recently, aged 53.

Francis King, M.A., Counsel, Dominion Marine Association, Kingston, Ont., attended the Canadian Bar Association's annual meeting in Montreal recently, as one of the commissioners appointed for Ontario to promote uniformity of law.

T. R. Ferguson, Chairman, Board of Steamship Inspection, Ottawa, died at the Jeffery Hale Hospital, Quebec, Que., Aug. 28, after a very short illness. He was born at Pictou, N.S., Jan. 10, 1866, and received his temporary appointment in the civil service, May, 1889, his appointment being made permanent, Nov. 15, 1909.

Capt. Neil Campbell, master of Canada Steamship Lines' s.s. W. Grant Morden, died on board his vessel, while en route to Sault Ste. Marie, Sept. 1, as the result of a paralytic seizure. He was aged 68, and had been connected with lake service for over 50 years, during 40 of which he had been master. The body was landed at Sault Ste. Marie, and taken to Owen Sound, where the funeral took place.

Capt. J. O. Grey, who has been appointed Shipping Master for the port of Montreal, is well known in the district as the founder of a school of navigation and seamanship for training young men for the merchant marine, which was organized in Oct., 1917. From 1911 he acted as Superintendent of wharves and shipping at Montreal. He was born in 1872, and entered merchant marine service at the age of 14, as an apprentice on Australian and New Zealand square rigged vessels, and obtained his master's certificate five years later. He later entered the service of the American Line, and transferred to shore work in 1911. No salary attaches to the position the income obtained being from fees, which average from \$3,000 to \$4,000 a year.

Steam Navigation Co. of Canada, Ltd., which was incorporated under the Dominion Companies Act, recently, with office at Montreal, has changed its office to Halifax, N.S.

The schooner Bianca, owned by Bowring Bros., St. John's, Nfld., which was attacked recently by a German submarine on the banks, was towed into Halifax towards the end of August, by schooner Commonwealth, owned in Boston, Mass. The owners, master and crew of the Commonwealth, have libelled the vessel on a claim for \$125,000 for salvage.

### Telegraph, Telephone and Cable Matters.

Jas. Coleleugh, who died at Vancouver, B.C., recently, was the first mayor of Selkirk, Man., during C.P.R. construction there, and claimed to have sent the first telegraphic message over the C.P.R. telegraph system.

The Great North Western Telegraph Co. has opened offices at St. Yvon, Que., Langruth, Man., and Mecheche, Alta., and has closed its offices at Manoir Richelieu, Pointe au Pic, Que., Glencoe, Queen's Royal Hotel, Niagara on the Lake, and Royal Muskoka Hotel, Ont., and at St. Boniface, East Selkirk, Seantlebury and Victoria Beach, Man.

### Among the Express Companies.

W. D. Thompson has been appointed acting agent, Dominion Ex. Co., Calgary, Alta., vice F. R. Jelfs.

W. E. Norton, agent, Dominion Ex. Co., New Glasgow, N.S., has been appointed agent at Sydney, N.S.

R. Glover has been appointed agent, Dominion Ex. Co., North Bay, Ont., vice F. W. Carr, transferred.

F. Atkinson has been appointed acting route agent, Dominion Ex. Co., Levis, Que., vice G. E. Whitney, deceased.

F. W. Carr, heretofore agent, Dominion Ex. Co., North Bay, Ont., has been appointed agent, Kingston, Ont., vice G. W. Leavey.

F. A. Renwick, heretofore station agent, St. John, N.B., has been appointed cashier, Canadian Ex. Co., St. John, N.B., vice T. E. Doyle, deceased.

W. G. Everett, heretofore route agent, has been appointed agent, Canadian Ex. Co., St. John, N.B., vice Jos. Taylor, retired after 42 years service.

The American Railway Express Co., the federation of U.S. express companies, formed under the U.S. Railroad Administration, has been authorized to carry on its business in Canada. A. C. Heffernan has been appointed attorney general at Montreal, and J. E. Archer, at Vancouver, B.C.

A number of Dominion Ex. Co. employees struck work at various points, Sept. 10, owing to dissatisfaction with the existing schedule, and at the same time demanding recognition of the Canadian Brotherhood of Railway Employees. The strike was by no means general, but there was some dislocation of traffic. The majority of the company's employees are members of the Brotherhood of Dominion Express Employees, and it was contended that the cause of the trouble, was really a dispute between the two organizations. The schedule under which the men are working does not expire until May, 1919, and under these circumstances the Labor Department did not see its way to accede to the men's request for the appointment of a conciliation board. After some negotiations, in which V.G.R. Vickers, formerly General Superintendent, Atlantic Division, Dominion Ex. Co., and now Vice President, The Holden Co. Ltd., Montreal, took part, the strike was ended Sept. 13, and T. E. McDonnell, Vice President and General Manager of the company, consented to receive a deputation of the men, on their return to work, to hear any objections they may have regarding pay and working hours, etc. The contention for the recognition of the Brotherhood of Railway Employees was dropped.

Standard Derrick Engine, made  
in 7 sizes, from 10 to 50  
Horse Power.

## We Design Special Equipment for Special Needs

For a quarter of a century we have been designing and building **Hoisting Machinery, Small Cars and Buckets** to suit the special needs of the buyer, and with the most satisfactory results to our customers.

**Our experience is at your service.  
Our experts are at your command.**

We make no charge for any advice or assistance we may give you to help you solve your problems, though you may save much money thereby.

**Let us assist you in designing an equipment suitable for your own needs.**

**MARSH ENGINEERING WORKS LIMITED**

Established

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Lyman Tube & Supply Co. has appointed H. A. Jones, of Montreal, to its sales staff, with headquarters at Toronto.

Independent Pneumatic Tool Co., Chicago, Toronto, and Montreal, has issued a four page circular describing and illustrating its pneumatic and electric tools.

W. G. Gordon has retired from the Railway & Power Engineering Corporation, and from Malm, Gordon & Co., Toronto, and has returned to the Canadian General Electric Co. as Transportation Engineer.

Canadian Ingersoll-Rand Co., Sherbrooke, Que., has issued bulletin K303,

describing class E.L.-2 two-stage straight line air compressor. It deals with the tandem arrangement for certain classes of work where economy of space is to be combined with the advantages of 2-stage compression, and gives details of construction, including the leaf valves and other features, also particulars of the short belt drive with which this type of compressor can be furnished, and for which advantages are claimed where space is at a premium.

**American Locomotive Co.'s Report.** — The profits for the year ended June 30 were \$9,930,088.37, of which there is a balance available, after deduction of income and war taxes, of \$5,911,137.40. The usual dividend of 7% on the preference stock, and 5% dividend on the common stock absorbed \$3,000,000, leaving a surplus of \$2,911,137.40. Of this amount, \$1,000,000 is reserved for additions and betterments to plants, and the balance is added to the company's surplus. The cost of restoring the Richmond and Montreal Locomotive Works' plants was charged to a reserve created for this purpose out of previous years' profits. The bond-

ed indebtedness of the Locomotive & Machine Co. of Montreal, Ltd., now Montreal Locomotive Works Ltd., is \$1,500,000, consisting of 1st mortgage 4% gold bonds, issued Mar. 31, 1904, and maturing Mar. 1, 1924.

### THE CANADIAN NORTHERN RAILWAY COMPANY.

Notice is hereby given that the Annual General Meeting of the shareholders of the Company will be held at the Head Office of the Company, 1 Toronto Street, Toronto, on Friday the 25th day of October, 1918, at the hour of 11 o'clock a.m., for the purpose of considering, and if thought fit, of approving of the Directors' report and the consolidated Balance Sheet and Profit and Loss Account of the Canadian Northern Railway System for the year ending June 30th, 1917, also for the purpose of electing the Board of Directors of the Company and the appointment of Auditors; also for the purpose of considering, and if thought fit, approving and confirming a By-law respecting the appointment of an Executive Committee; also for the purpose of considering and dealing with such other matters as may properly be brought before the meeting.

By order of the Board of Directors,

R. P. ORMSBY,  
Assistant-Secretary.

Dated at Toronto, this 19th day of September, 1918.

## A Study of the Mechanics of Curve Resistance.

By J. G. Sullivan, Consulting Engineer, C.P.R., Winnipeg, formerly Chief Engineer, Western Lines, C.P.R.

This is a subject that the writer has been interested in for a great many years, and as chairman of committee 16, Economics of Railway Location, American Railway Engineering Association, he has had occasion to study several theories on this subject, even to the theory that curve resistance was caused by the friction between the inner wheels and the inside rail of the curve, on account of the obliquity of traction. The majority of the theorists, however, give centrifugal force the center of the stage as one of the main factors in this problem.

The Economic Theory of Railway Location, by A. M. Wellington (6th edition), states in paragraph 296, pages 233 and 284: "The coning now put in wheels is chiefly useful as a prospective provision for wear; and experiment shows that whether the wheels be coned or not, the tendency of any rectangular wheel-base is to roll very nearly in a straight line." This statement appears logical, but unfortunately it is not entirely true, as the writer will try to prove further on. What Mr. Wellington said years ago is still true (paragraph 292, page 281): "Curve resistance has never yet been exhaustively investigated, and our knowledge is in several respects deficient." The late Mr. Wellington seemed to have the most accurate knowledge of the actual conditions of any authority that the writer has ever read; still, we cannot agree with some of his conclusions. For instance, paragraph 314, page 294, in speaking of the conditions that exist, as shown in his figure 31, same page, states: "The consequences of this condition of things are these: first, the disproportion in the diameter of the wheels; hence the necessary longitudinal slipping, and hence the curve resistance is materially increased. If the increase of radius of wheel be 3 16 in., the extra distance slipped through per station of 100 ft. by one wheel will be 1.16 ft." The writer believes, which he hopes to prove later, that the emphasized statements are exactly opposite to the facts.

Referring to the theory of centrifugal force in this problem, the writer believes that with track having anything like the correct elevation of the outer rail, this is a very minor factor, that as far as the action of centrifugal force on the car body is concerned the result is simply the placing of more or less weight on the outer rail. Centrifugal force, acting on the truck, may effect the problem to a slight degree.

The theory of obliquity of traction, of course, is absurd, for we have on all railways positive evidence that the flanges of railway wheels cut away the head of the outside rail, while the evidence is plain that there is no flange wear against the head of the inner rail. The writer has no doubt that this obliquity of traction has a slight effect on the problem, but that this effect is very small is proved by the fact that a locomotive will practically push as many cars as it will pull. In the first place, the obliquity of traction

is forcing the equipment against the outside rail, in addition to the other force that makes the flanges run against the outside rail, while in the latter case, the obliquity of traction is pulling the cars away from the outer rail; therefore, if this force was of any great moment, doubling the effect, as in the cases mentioned, would be more apparent than it proves to be in actual practice.

J. G. Sullivan, C.E.

The writer is well aware of the fact that it is easier to tear down than to build up, and the reader will rightfully say: "What is the good of all this criticism unless we can get some constructive material in its place?" To this the writer will have to admit that he cannot offer any scientific formulae that will satisfactorily explain actual curve resistance as we find it in practice. On the other hand, the writer has never seen in print a statement of what he considers the real reason why all outer wheels of railway equipment exert a pressure against the outer rail on a curve. Wellington states it is the rigid rectangular shape of the wheel-base. Those who pin their faith on the centrifugal force theory would make you believe that the wheels press against either the inside or outside rail, depending on the elevation of the outer rail in reference to the velocity. This we know from experience and practice is not true.

The reason all wheels of modern equipment, regardless of degree of curve, speed of train or elevation of track (within reasonable limits) exert a pressure

against the outer rail on a curve is the fact that a revolving cylinder tends to rotate in a straight line perpendicular to the axis of rotation; or to reverse this proposition, to make a revolving cylinder move in a direction not parallel with a line perpendicular to the axis of rotation requires a greater force than the force necessary to rotate the cylinder in a straight line perpendicular to its axis of rotation. If our wheels were manufactured with flat treads and vertical flanges, on account of their being fastened rigidly to the axle, we would have in practice our equipment carried on revolving cylinders, with a portion of the cylinder cut away, and if this were the case, the writer believes it would be possible to devise formulae that would correctly represent actual amount of curve resistance. The writer's ideas can be made clearer by reference to plate 1, figs. 1 and 2, which represents a 4-wheel rectangular truck, with wheels rigid on the axle, rigid wheel-base and flat tread. The smallest force necessary to move this truck is the one required to move it on a straight line, perpendicular to the axis of rotation of the wheels. The force necessary to move such a truck parallel to the axis of the wheels, would be the weight of the truck multiplied by the coefficient of friction between the truck wheels and the surface on which it was skidded. If we represent these two forces by  $y$  and  $x$  respectively, and assume that we have a power at B moving in a straight line CB, such as a locomotive on a truck, and that this locomotive was attached by a flexible rope or cable to the center pin of the truck at C', the connection being made by swivel, and other details so perfect that the truck would maintain the same relative position while it was being moved along line C'B', the trucks would take the position so that the tangent of angle (a) made by the cable C'B and a line parallel with the axis of the trucks passing through C' would be constant and equal

to  $\frac{y}{x}$  and the strain in the cable would

be equal to  $\sqrt{y^2 + x^2}$ , and resolving this

force C'B" into two forces, one parallel to the line C'B' and the other perpendicular to this line, we get the actual pull in direction C'B' equal to C'y", and the pull on the locomotive at right angles to the track is equal to C"x"; if we give a definite value to angle  $\phi$  it would be easy to obtain actual values of  $x$  and  $y$ . Instead of allowing the truck to take the position indicated in fig. 2, if there were small cleats (R.R. and R'R') nailed on the flat surface on which it is assumed the truck is moving, as indicated in fig. 1, neglecting the amount of friction between the wheel and the cleat, the pull on the locomotive would be C'y" and the pressure against the cleats would be C"x". Now, instead of having a straight line C B, if we have a curve line passing through C, we could replace the two cleats

by a curved rail and have almost identical conditions. If we then had a flat tread wheel and vertical flange, as shown in fig. 4, with correct elevation, half the axle load would be on the outer rail and the horizontal pressure against the outer rail would be the total load on the axle, multiplied by the coefficient of friction necessary to skid the wheels. This force, acting against the flange of the rail, something in the position of the line AB, shown in fig. 5, might be susceptible of a mathematical solution, and we could no doubt get formulae which would correctly represent curve resistance as we know it to exist. Now, everything that has been said in regard to the truck in fig. 1 and fig. 2 would be actually true if applied to a single set of wheels.

It is generally conceded that curve resistance amounts to approximately 0.8 lb. per ton of load per degree of curvature. A great many believe that the major por-

tion of this resistance consists in the skidding of the wheels in a longitudinal direction, on account of the difference in length of the inner and outer rails. If this skidding actually took place, the difference in length between the inner and outer rails, on a one degree curve for a distance of 100 ft. being approximately 1 in., one half the load on the wheels would have to be skidded 1 in., or if the skidding backward and forward were equal, the entire load would have to be skidded  $\frac{1}{2}$  in.; and even assuming a large coefficient of friction for a moving body, say, 22%, a little calculation will prove that the work done in this skidding would only account for  $\frac{1}{4}$  of the 0.8 lb. mentioned above.

rect, there would be no flange pressure on either rail; in other words, the diameter of the wheels was made directly proportional to the length of the two rails on an 8° 10' curve. These wheels were turned with a standard flange, but with a flat tread; they were put under C.P.R. steel flat car 311,074, 36 ft. 10 in. long, 5 x 9 in. journals, a simplex truck frame, center to center of axles 5 ft. 4 in., center to center of trucks 26 ft. 7 in., Susemihl side bearings. The tare of this car was 31,200 lb., live load 99,000 lb. of steel rails. The first experiments made with this car were with the idea of testing the tractive force necessary to move the same.

The writer asked the C.P.R. Mechanical Department officials to rig up a system of levers with a spring balance, that would be capable of measuring the tension necessary to pull the car on a level, straight track. The Mechanical Department officials, however, were of the

expected, viz., that the resistance on the 8° 10' curve was only 50% to 60% of the resistance on straight track, and when the car was pulling over the 5° reverse curve, which was really too short to get a constant pressure, being less than 150 ft. long, the indicator went up 10 to 20 over what it had been on straight track.

A very instructive lesson was obtained through a mistake that had been made. In going around the long 8° 10' curve at all speeds, varying from 5 to 20 miles an hour, it was noticed that the trucks would first run against one rail and then against the other. It was further noticed that the conditions were the same at every trial; that is, the location where the trucks would press against the outer rail were the same. The writer sent for the resident engineer, who was instructed to measure the curve, and he reported:—"I thought you wished to know what degree of curve would best fit this location; the curve is not true, it must be thrown 5 or 6 in. in or out at several points." This, of course, was the explanation why the trucks did not run true. We simply had a series of compound curves, some sharper and some flatter than 8° 10'; the elevation at this time was about 3 in.

The next test consisted of pulling C.P.R. flat car 310,173, similar in all details to 311,074, except that the former had standard trucks, which were in very good shape. The dynamometer car results indicated, as we expected, that the resistance on straight track was only 40% to 50% of the resistance on the 8° 10' curve. The tests were then stopped, the curve was properly lined and surfaced and the elevation reduced to 2 in. At a later date exactly the same tests that were mentioned above were repeated. The packing was somewhat loosened up and more accurate results obtained, but still not accurate enough to be given as a measure of either curve or track resistance. While the relative resistance of straight, versus curved track, was quite constant, the indicated resistance of different tests on the same track varied too much to justify even taking the mean of the number of tests we made as a measure of track resistance. The results, however, prove conclusively that the resistance offered on an 8° 10' curve to the car with the special wheels, was only 50% to 60% of the resistance on straight track, and, as you would expect, with another similar car 310,026 with a total weight of 129,000 lb., with nearly new standard wheels, the resistance on straight track was only 40% to 50% of the resistance on the curve; but the most important feature of this test was the fact that the trucks under 311,074, while going around the 8° 10' curve, never pressed against the head of either the inner or outer rails, but ran exactly as true as the ordinary truck runs on a straight track, as this was true regardless of the speed, from 5 to 25 miles an hour, thus proving, at least to the writer's mind, that the rectangular shape of wheel-base, especially so for the short wheel-base of a freight truck, has very little, or nothing, to do with causing the pressure of the wheels against the outer rail.

The next test that was made was one to determine, if possible, which wheels of a railway car do the skidding and the amount thereof. The writer has always been of the opinion that on account of the extra horizontal pressure of the leading wheel of a truck against the outside rail, that unless the vertical pressure on the inner rail was largely in excess of the vertical pressure on the outer rail, there would be very little or no skidding of the

tion of this resistance consists in the skidding of the wheels in a longitudinal direction, on account of the difference in length of the inner and outer rails. If this skidding actually took place, the difference in length between the inner and outer rails, on a one degree curve for a distance of 100 ft. being approximately 1 in., one half the load on the wheels would have to be skidded 1 in., or if the skidding backward and forward were equal, the entire load would have to be skidded  $\frac{1}{2}$  in.; and even assuming a large coefficient of friction for a moving body, say, 22%, a little calculation will prove that the work done in this skidding would only account for  $\frac{1}{4}$  of the 0.8 lb. mentioned above.

In order to check the writer's ideas that the greater portion of curve resistance was caused by the pressure of the wheels against the outer rail, caused by the tendency of a cylinder to rotate in a line perpendicular to its axis, as mentioned before, the writer had a long 8° 10' curve, leading off the yards in Winnipeg, carefully measured up. He then calculated what diameter the inner and outer wheels should be, so that in passing around this curve, if the theory of coning proved cor-

rect, there would be no flange pressure on either rail; in other words, the diameter of the wheels was made directly proportional to the length of the two rails on an 8° 10' curve. These wheels were turned with a standard flange, but with a flat tread; they were put under C.P.R. steel flat car 311,074, 36 ft. 10 in. long, 5 x 9 in. journals, a simplex truck frame, center to center of axles 5 ft. 4 in., center to center of trucks 26 ft. 7 in., Susemihl side bearings. The tare of this car was 31,200 lb., live load 99,000 lb. of steel rails. The first experiments made with this car were with the idea of testing the tractive force necessary to move the same.

Six or seven tests were made in hauling this loaded car over this 8° 10' curve, which was over 1,000 ft. long, then over a distance of 2,000 ft. of straight level track, thence over a short 5° curve in the reverse direction. It was apparent from the start that on account of the packing our machine was not delicate enough to accurately measure small pressures. The writer, therefore, abandoned the idea of attempting to get a definite figure in pounds per ton with this machine, but the results prove conclusively what the writer

outer front wheel of the truck. The writer is convinced that this is true, also that there is no backward skidding of the inner front wheel, which was more than at first expected.

In plate II, there are five figures indicating various conditions that we meet with in general conditions. Fig. 1, shows standard wheels on C.P.R. standard 85 lb. rail straight track. The circumference that is measured in mating wheels is indicated as on "wheel diameter line," 1 in. from the base of flange and about 1 in. from the end of the 1 in 20 taper; that is, the radius of the wheel at the end of the 1 in 20 taper is about 0.05 of an inch less than at the point of measurement, making the small diameter about 0.10 of an inch less than at the point of measurement; that is, the circumference of the wheel at this point is nearly  $\frac{1}{3}$  of an inch less than at the point of measurement. The other figures are self explanatory, and indicate conditions that do exist, as any investigator can prove for himself by taking small gauge copper or soft iron wire and placing it transversely across the rail under a moving wheel on a curve. The condition shown in fig. 5 will not, of course, be constant, for the reason that the outside wheel in that case is rolling on such a very large diameter that it would soon slip away from the rail entirely if it could be supported on this large diameter; but what takes place in this case, and which can be verified by watching the leading inner wheel of a truck travelling on a worn rail (as is indicated) is a nosing motion; that is the wheel is constantly moving with a jerky motion. This feature can be very well observed by riding on the pilot of a locomotive with a sharp flange pony truck, whenever the same is going over a track where the outer rail on a curve is badly worn.

The writer has purposely called the attention of the reader to plate II and the various figures thereon, to prepare his mind for an explanation of the apparently contradictory evidence obtained in some tests made with a view of attempting to measure the amount of skidding of the wheels. C.P.R. flat car 310,016, gross weight 129,100 lb., was run at a speed of about four miles an hour a distance of about 600 ft. over the above mentioned  $8^{\circ} 10'$  curve; the car was started from rest, each wheel marked at point of contact with rail. It was then moved north until the leading wheel had made 70 revolutions, the revolutions on all the other wheels were counted and measurements taken to show how far they would have to go to complete the 70 revolutions. The car was then run in the reverse direction. Table I gives the results of these measurements; in column 2, actual distance traversed by each wheel in making 70 revolutions is recorded; in column 3, 70 times the circumference taped in the field close to the flange. It should be noted here, however, that only the wheels on the one side of the car were taped. It was taken for granted that they would be properly mated, as they showed no flange wear that would indicate they were not. Column 4 gives the difference, or apparent skidding distance of each wheel, if the wheels had been running on the diameter as measured. After the test was made, the car was sent to the shop, the wheels taken out and officially taped. In column 5, is shown 70 times the circumference of this official taping, and in column 6 the difference between 70 times the circumference and the actual difference travelled on the rail. We started out with the idea that there would be very little or no skidding of the outside leading

wheels of any truck. If one will note, however, the outer wheel's axle, nos. 1 and 3, column 4 and 6, the car going north, and also the outside wheel on axles 2 and 4 in column 4 and 6, when the car was going south, one would be apt to say that these were the wheels that did the skidding. As a matter of fact, however, from experiments made with a very soft fine wire, the writer is convinced that the outer leading wheels on a truck take the position indicated in figs. 2, 3, 4 and 5, plate II, and that there is absolutely no backward skidding of the inner leading wheels of any railway truck in rounding a curve. Any skidding that may take place in the wheels of the leading axle is equal and in a forward direction, taking the very small amount of indicated backward slip of the inner wheel axles 1 and 3 going north, and 2 and 4 going south, column 4, where we know the taping was

this forward skidding of both wheels of leading axle is quite natural.

It should be noted here that 5 or 6 rails were taken from the inside of the car, and placed on the outside, in an attempt to balance the vertical pressure on the two rails of the curve, on account of 2 in. being too much elevation for a speed of 4 miles an hour. However, there were not enough rails moved to entirely overcome the effect of the 2 in. elevation.

If the reader will again look at figs. 2, 3, 4 and 5, he will see how easy it is to get a wheel to ride  $\frac{1}{4}$  of an inch or more high; that is, increase the diameter on which the wheel rotates by  $\frac{1}{4}$  of an inch and that is all it requires to account for the extra 4,862 ft.

Now, making a study of all the outer rear wheels of the trucks, it is very plain to the writer, as observation and experiments proved, that these wheels press

taken on a larger diameter than the one the wheels were rotating on, and taking the figures in column 6 for the inner wheels of the leading axles of the trucks, which indicate a positive forward slip of the inner wheel, when we know that the diameter on which the wheels were rotating could not have been larger than the diameter on which measurements were made, would indicate that the outer wheel was pressed so hard against the outer rail that the resistance against free rotation was so great that the result is that both wheels were actually skidded a short distance forward. It is well known that a speedometer attached to the rear wheel of an automobile will register a greater amount of miles than one attached to the front wheel of the same diameter. If we reversed this situation, and there were obstructions placed in the way of a wheel, equal to the force exerted in driving the car, we would expect this wheel to show a loss in distance equal to the gain in distance shown by speedometer on the rear wheel. It appears to the writer that

against the outer rail and ride on a larger diameter than the official taping indicates, but not sufficient to overcome skidding entirely; that is, there is some skidding of the inner wheel of the rear axle of a truck, although the amount is rather small. This conclusion is directly opposite to that stated in paragraph 302, page 285, *The Economic Theory of Railway Location*, by Wellington. On a test with C.P.R. flat car 311,074, with the special wheels, on about 600 ft. of straight track, measurements were made for only the leading truck, and it was found that there was about 3 in. slip on the larger wheel of the leading axle and about 10 in. on the larger wheel of the rear axle. These amounts were reversed when the car was run in the reverse direction, and as the difference in the diameter of wheels, the treads being turned flat, amounts to about 4.2 ft., in going a distance of 603 ft., the writer was convinced that the small amounts of slip mentioned, 3 in. and 10 in. respectively, were accounted for by the fact that the wheels of smaller diameter,

in their attempt to mount the rail, rode on a larger diameter, and that there was very little, if any, slipping of the smaller wheels.

Similar tests as to that taken with C.P.R. car 310,016 had been previously made with C.P.R. flat car 310,073. They confirmed exactly the results obtained with car 310,016, but the car got out of the yard before the wheels could be officially taped, and the results made of that car are not reported. Another test on a side track, laid parallel and on the outside of the 8° 10' curve, track laid with 56 lb. steel, C.P.R. car 310,016 loaded as in the experiment recorded, gave practically identical results with those recorded.

The writer's object, in giving this matter to the public, is to revive interest in this subject, bring out discussion, and if possible get more information on this important question. It is only when the actual causes of trouble are really understood that the proper remedies can be applied. The second reason is to call the attention of railway operating officials to the fact that it is a waste of fuel to haul over railways cars, the wheels of which are not running true. It is the writer's belief that over 75% of the wheels that are taken out of service, on account of

general any skidding that does take place is on the inner wheel of the rear axle.

The reader will naturally ask: "If there is very little skidding of wheels, wherein lies the considerable resistance offered by curves that we know from experience actually exists?" That is the problem the writer started out to try and solve, but as stated at the beginning, he cannot give any reasonable formulae. The writer had formulae for the case of flat wheels and vertical flanges, that worked out beautifully close to the accepted amount of resistance offered by curvature in these formulae; however, coefficients of friction were taken rather large for bodies actually moving on each other, and the horizontal pressure against the outside rail was assumed to be  $\frac{3}{8}$  in. below the top of the flat top and vertical side of rail, as shown at B, figs. 4 and 5, plate I—but what is the use of giving formulae for conditions that we know do not exist? The only thing the writer can offer is his opinion, which is that the major factor in the resistance offered by curvature is caused by the flanges of the outside wheels striking the outside rail at an angle, instead of rotating in lines parallel with the gauge side of the head of the rail. Any one who doubts the reasonable-

Table 1.

Results of test to determine amount of slip C.P.R. flat car 310,016, loaded with steel rails, gross weight 129,100 lb.; 8° 10' curve; outer rail elevated 2 in.; speed about 4 miles an hour.

Weight 129,100 lb.; $\times 10^{-6}$ curve; outer rail elevated 2 in.; speed about 4 miles an hour.

sharp flanges, have only one wheel on an axle with a sharp flange. This is caused either by poorly mating the wheels, or by them being placed in trucks that are not properly squared. Whatever the cause, this matter should be given more attention by mechanical and operating officials.

The writer is convinced that the greater portion of curve resistance is caused by pressure of the flange against a single rail, therefore the mating of wheels or setting up of trucks not properly true, that causes the flange on one wheel of an axle to wear sharp, is not only shortening the life of the wheel, but is costing the company considerably more money to acquire this undesirable result.

The following is a summary of the writer's conclusions:—

1. All outer wheels of railway equipment exert a pressure against the outer rail when rounding a curve.
2. The cause of this pressure is the tendency of a cylindrical body to rotate in a straight line at right angles to the axle of rotation.
3. That there is never any skidding of either wheels of the leading axle of a truck, unless it is a forward skidding of both wheels, caused by the resistance to rotation being great enough to cause a slight retardation to rotation, which results in an apparent forward skidding.
4. That there is no skidding of the outer wheel of a rear axle, and that in

ness of this opinion can ask an old timer what his experience was in the days before gasoline, in pumping a velocipede over the road, with the leading wheel not set true, and especially when it was set to hug the rail.

The writer wishes to acknowledge, with thanks, some valuable criticisms on this subject by I. P. Church, Professor Emeritus of Cornell University, Ithaca, N.Y., and would be very glad if Professor Church could be induced to write a criticism of this paper to be given to the public.

### Electric Welding in the War.

Three hundred men from the Ordnance Department, U.S. Army, will be trained as electric welders in schools established by the electric welding section of the Industrial Relations Group. They will be used in the reclamation of millions of dollars worth of war materials gathered from the French battlefields. Ten men of the Expeditionary Forces already are in training at the Cleveland school, and the remainder will be sent to the schools in relays. It is estimated that millions of dollars will be saved to the War Department through this work.

Ship welders are being trained without charge in the electric welding section's schools at Schenectady, New York City, Cleveland and Philadelphia.

### Railway Maintenance of Way Employees Wages.

Supplement 8 to the Director General of United States Railroads' general order 27, fixing rates of pay and rules for overtime and working conditions for railway maintenance of way employees, which became effective in the U.S. Sept. 1, is being considered by a committee representing Canadian railways collectively and a committee representing the Brotherhood of Maintenance of Way Employees, in order that an amicable understanding may be reached as to uniform application of the supplement's provisions on Canadian railways.

The members of the committee representing the railways is composed of M. S. Blacklock, Engineer, Maintenance of Way, G.T.R.; A. E. Crilly, Assistant to General Manager, Eastern Lines, Canadian Government Railways, and G. Hodge, Assistant to Vice President, Eastern Lines, C.P.R.

The members of the committee representing the Brotherhood of Maintenance of Way Employees is composed of: A. McAndrew, acting General Chairman, C. P.R.; W. Robson, Secretary, Joint Protective Board, C.G.R.; W. Jewkes, Secretary, C.P.R. Joint Protective Board; P. Wood, General Chairman, Canadian Northern Ry.; W. Thompson, Assistant General Chairman, Canadian Northern Ry.; G. H. Cummings, General Chairman, G.T.R.; M. H. McCurdy, General Chairman, Dominion Atlantic Ry.; W. Aspinall, General Chairman, G.T.P.R.; G. W. Murray, General Chairman, Canadian Government Rys.; L. E. Moore, General Chairman, T. & N.O.R.; J. Sheppard, General Chairman, Q.M. & S.R.; W. Dorey, General Chairman, I.B. of M.W.E.

The Farmers Grain & Shipping Rd. runs from Devils Lake, N.D., where connection is made with the Great Northern and Minneapolis, St. Paul and Sault Ste. Marie Rys., to Starkweather, Crocus and Hansboro, 66 miles, and is operated under the U.S. Railroad Administration. The following appointments have been made: J. M. Gruber, General Manager; M. L. Countryman, General Solicitor; A. H. Hegeland, Chief Engineer; F. A. Bushnell, Purchasing Agent; F. A. Barnes, Federal Auditor; L. E. Katzenbach, Federal Treasurer, all of whom hold similar positions with the Great Northern Ry., under the U.S. Railroad Administration, with offices at St. Paul, Minn.

The Toronto Terminals Ry.'s application for permission to lay steam pipes from the Toronto Electric Light Co.'s plant at the foot of Scott St., along the Esplanade to the new Union Station, for the supply of heat for the premises, under a three year contract, came before the city's board of control Oct. 25, when the board decided to oppose the application, stating that the company should give preference to the city system. It was pointed out that the city hydro electric system could not supply steam for heating, and could not guarantee continuous lighting service, and the T.E.L. Co. would not supply the steam without the light.

D. O. Wood, Superintendent, Inland Transportation, British Ministry of Shipping (Canada), Montreal, in remitting his subscription to Canadian Railway and Marine World, which he has taken for many years, writes: "I like your paper very much and think it is the best of its kind."

## Honoring Canadian Pacific Railway's Locomotive Men.

In order to give recognition to the part played by the locomotive men in building up and maintaining the efficiency of the train service, the C.P.R. some time ago inaugurated the plan of naming certain locomotives after men who have distinguished themselves by length and efficiency of service, or by some outstanding act of service deserve special notice. Several locomotives on both eastern and western lines have already been decor-

ated with a specially designed crest bearing the name of the driver honored. The design consists of the C.P.R. crest, viz.: a shield bearing a maple leaf and surmounted by a beaver, the whole enclosed in a circle, with the words, "Canadian Pacific" above, and the locomotive man's name in the lower sector. The locomotive carries this design on each side just below the cab window, as shown in the

illustration herewith, which is taken from locomotive 2038, known as the President's locomotive.

Following is a list of locomotives already named, with their territory, and the name of the man placed thereon. In the few cases where the locomotive number is not given, selection of the locomotive to be named had not been made at the time of writing.

No.	Territory.	Name.
2038	President's locomotive	Jack Hartney
2621	Mattawamkeag-Moosehead	Ed. Cooney
2597	Newport	Geo. Magowan
2213	Sherbrooke	Bil Stapleton
2504	Three Rivers	Harry Leclerc
555	Ste. Agathe, Montreal	Bill Singleton
2518	Point Fortune	Art. Charlebois
2221	Winchester	Mike Carmody
2021	Chalk River	Michael Charrier
2625	Belleville	Steve O'Hara
2623	Oshawa	Billy Burnett
2554	Peterborough	Ed. Williams
2214	Havelock	Joe Dorricott

68	Port McNicoll	Shiner Rose
2659	Mactier	Jack Douglass
2055	Brooks	William Wilson
2230	Galt	Jack Maina
2223	Windsor	Geo. Blencoe
2528	North Bay	Geo. Leach
2597	Parry Sound	Frank Reynolds
2606	Cartier	Tom Turner
2509	Nemegos	Bill McAdam
2665	Heron Bay	Harry West
2626	White River	Jas. Rose
2663	Nipigon	Alfred Bilbie
2093	Webbwood, Thessalon	Jack Beattie
2527		H. Jackson
3491		A. Langlois
	St. Stephen-Edmundston	Jim Foster
		Harry Saunders

2585	Cranbrook	Tom Gill
562	Cranbrook	Dan Murphy
2540	Vancouver	Duke MacKenzie
2638		F. Allott
2057		Adam Hopkirk
2650		Con. Leary
2068		Andy McFarlane
2586	Vancouver	Ted Hosker

## Birthdays of Transportation Men in November.

Many happy returns of the day to—  
F. W. Alexander, Engineer, Alberta District, C.P.R., Calgary, born at Fredericton Jct., N.B., Nov. 22, 1878.

J. O. Apps, General Baggage Agent, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

A. B. Atwater, Assistant to President, lines west of Detroit and St. Clair Rivers, G.T.R., Detroit, Mich., born at Sheffield, Ohio, Nov., 1845.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

C. C. Bonter, General Baggage Agent, Canada Steamship Lines, Ltd., Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'Or Coal Co., Ltd., North Sydney, N.S., born at Sydney, N.S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Canadian Northern Ry., Winnipeg, born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Division Freight Agent, B.C. Coast Service and Ocean Steamship Lines, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, Advertising Agent, Canadian Government Railways, Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

W. R. Davidson, General Superintendent, Eastern Lines G.T.R., Montreal, born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, Superintendent, District 3, Intercolonial Division, Canadian Government Railways, Moncton, N.B., born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, acting Assistant General Purchasing Agent, C.P.R., Montreal, born at Montreal, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitby, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, jr., Manager, Canadian Pacific Car & Passenger Transfer Co., and President, Prescott & Ogdensburg Ferry Co., Ltd., Prescott, Ont., born at Spencerville, Ont., Nov. 14, 1872.

R. L. Fairbairn, General Passenger Agent, Canadian Northern Ry., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

J. E. Gibault, Resident Engineer, District 1, Transcontinental Division, Canadian Government Railways, Quebec, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

H. E. Haanel, Superintendent, Dominion Atlantic Ry., Kentville, N.S., born at Cobourg, Ont., Nov. 2, 1880.

Grant Hall, Vice President, C.P.R.,

Montreal, born there, Nov. 27, 1863.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

J. McGillivray, Receiver and Manager, Inverness Ry. & Coal Co., Inverness, N.S., born at Nairn, Scotland, Nov. 13, 1867.

J. McMillan, Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1866.

A. B. McNaughton, General Yardmaster, Ottawa Terminals, G.T.R., Ottawa, Ont., born at Arnprior, Ont., Nov. 10, 1877.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Nelson Division, British Columbia District, C.P.R., Nelson, born at Montreal, Nov. 13, 1885.

W. J. Quinlan, District Passenger Agent, Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Nov. 21, 1883.

J. J. Rose, ex-General Agent, Union Pacific System, Toronto, born there, Nov. 22, 18780.

G. H. Shaw, General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, ex-General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, now in Imperial Munitions Board's service, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

H. E. Whittenberger, General Manager, Grand Trunk Western Lines Rd., Chicago, Ill., born at Peru, Ind., Nov. 9, 1869.

C. G. Washbon, ex-Resident Engineer, Medicine Hat, Alta., now at Terrys Point, Va., born at Morris, N.Y., Nov. 27, 1887.

W. A. Whyte, District-Freight Agent, Canadian Northern Ry., Regina, Sask., born at Hornsey, Eng., Nov. 24, 1890.

Aircraft Transport & Travel of Canada, Ltd., has been incorporated under the Dominion Companies Act, with authorized capital stock of \$250,000 in preference shares, and 2,500 common shares without nominal or par value, provided that the capital employed shall be \$262,500. The head office is at Montreal. The company has power to manufacture and deal in aeroplanes, balloons, airships and flying machines of all kinds, and to establish and maintain a regular service for the carriage of passengers and freight by air, water and land.

# Co-Ordination of the Various Branches of the Mechanical Department.

By W. U. Appleton, Superintendent of Motive Power, Canadian Government Railways, Moncton, N.B.

A system for regulating and combining the various branches of the mechanical department into one organization that will produce satisfactory service in the general repair shop and the operating department, obviously, must be broad and definite in its principles. Harmony between the various officers is essential, and the relationship between the branches must be very intimate. Success cannot be obtained if the general repair shop and the operating departments are not closely allied, as if the shop superintendent is working with the one object, "output," and the operating officers are not making every effort to obtain the greatest mileage from the locomotives, consistent with good service and economy, failure is sure to result.

In order to get results, it is necessary that we should have that co-operation, whereby the shop superintendent and all his subordinate officers are giving the same attention to proper repairs as to output, and it should be the object and pride of every master mechanic and his subordinate officers to obtain the greatest mileage between shoppings with the least number of failures. To repair a locomotive quickly, cheaply and properly, should be the ambition of the shop superintendent. To maintain it in service, with a minimum expense and the greatest number of miles between failures and shoppings, should be the aim and object of the master mechanic.

When locomotives are sent to the shop, there should be some system of defining the class of repairs required, and the writer believes that three classes, as described below, is the best method from the different points of view and sufficient to take care of all repairs. No. 1—General repairs, including a new firebox, a new cylinder or other such extra heavy repairs. No. 2—Ordinary general repairs. No. 3—Specific repairs that may be carried out at the roundhouse or shop. Abbreviations as follows should be used in conjunction with the numbers to describe specific repairs:

## No. 1, Repair

Convers, means conversion to superheater, etc.  
Boil, means new boiler.

F. B. means firebox.

Cyl. means cylinder (1 or 2).

Fra. means frames.

Int. means internal examination.

Ext. means external.

Der. means derailment.

## No. 2, Repair

Ext. means external.

Der. means derailment.

T. means new tires.

## No. 3, Repair

T. T. means tires turned.

Fr. W. means frame welded.

An. T. means annual test.

Int. means internal examination.

TU. means fixing up tubes.

DB. means driving boxes.

Der. means derailment.

No. 1 or no. 2 repairs should not indicate any difference in the condition of the locomotives when turned out of the shop, as far as the operating department is concerned, as the distinction is only made for the information and assistance of the shop force in effecting repairs, and either of these repairs should represent a locomotive in first class condition in every respect, and capable of making the standard mileage of its class, according to the physical characteristics of the division on which it is employed and the service it is in.

The condition of all parts of the locomotive should be as nearly balanced as

possible, in order to obtain the greatest mileage with the least loss of service, and it is false economy to turn locomotives out of the shop, represented as having received the above classes of repair, with certain parts somewhat worn, due to having been renewed a short time previous to shopping. For instance, it may seem wasteful to renew tubes or some part of the machinery that is apparently still capable of making considerable mileage, but as these parts will become defective and make renewal necessary before those that were brought up to standard of shop practice, the result usually is: locomotive out of service when badly required—delay in effecting repairs—and higher cost of doing so on account of lack of facilities

W. U. Appleton,  
Superintendent of Motive Power, Canadian  
Government Railways.

at locomotive houses as compared with shops.

No. 3 Repair—This differs entirely from those referred to. It represents specific work and may be done at locomotive houses or shops, and is sometimes the result of an accident to or failure of some particular parts, but is generally due to ordinary wear and tear of certain parts of the locomotive that are subject to the most severe service. The parts subject to the greatest wear would not, if the locomotive is properly maintained while in service, represent sufficient work to justify a no. 1 or no. 2 repair, and in order to enable these parts to continue their work until the locomotive is generally worn to the extent necessary to justify a shop repair, it is usually economical to effect such repairs.

The latter class of repair generally consists of partial renewal of tubes and flues, rod bearing work, lining up wedges, examination of pistons and valves, refitting main driving boxes and sometimes tire turning, and removal of lateral play from

wheels. The parts requiring attention will, of course, be found to vary considerably with the different classes of locomotives, as well as with the different classes of service they give and the subdivisions on which they are employed. In some classes of locomotives, on some subdivisions, the tubes and flues will run from shopping to shopping with very little trouble, while others on the same division, or the same class on other division will require partial renewal when little more than half the required mileage has been accomplished.

The constant introduction of larger power is so changing conditions as to make the question of doing no. 3 repairs at locomotive houses one of considerable controversy, and the question naturally arises as to the best method of taking care of this work. In the writer's opinion the no. 3 repair should be continued and not confused with the heavier repairs under classes 1 and 2, this being important in order to determine the condition of the power at all times, based on mileage made according to class of repairs, and to avoid expenditures being made on the power that should not be necessary.

Facilities at locomotive houses are generally inadequate to take care of this work, except on the smaller and medium classes of power. At locomotive houses where there is a heavy fluctuation in traffic, it is an advantage to have a no. 3 repair gang, as it enables those in charge to hold their staff together and they can be employed to advantage on running repairs when necessary.

In general repair shops, where the work is done on schedule and arranged so that the locomotives will be turned out at regular intervals and no. 3 repairs cannot be taken care of without interfering with the regular work, it is a debatable question as to the advisability of breaking up the organization in order to take care of this work, although under existing conditions there is usually no alternative. The changing conditions will, no doubt, make it necessary to provide certain space in general repair shops for this class of work, where it may be done at lower cost than at locomotive houses, but where locomotives have to be hauled or worked a long distance, to get to the general repair shop for such repairs, it might be advisable to provide a small shop for this class of repair, if the number of locomotives tributary to the same is sufficient to justify it.

To enable the shop superintendent to plan his work and maintain his schedule, it is only fair that he should be given all the advice possible as to the class of repair, and a list of the important parts that require replacement at least 30 days in advance of the locomotive going to the shop. While it may not always be possible to do this on account of locomotives being damaged in accidents, there is no reason why it cannot be done to a very large extent in ordinary service. A form for reporting the work, as shown herewith, has been found to be very satisfactory.

When making out this report of shop repairs required, master mechanics should devote particular attention to the note advising them to describe any special or unusual defect.

We all know that when a group of locomotives is built from the same drawings,

even though all the parts are duplicate in every respect, no two of the locomotives will behave alike in service, but that each individual machine will have its own peculiar virtues and vices. For instance, one locomotive may jig and ride badly; perhaps the fault is more apparent at certain speeds than at others, and again it may vary with the position of the reverse lever and according to whether the locomotive is working hard or light. There are several things which might

into service. What too often happens is that the operating department officials will run the locomotive until there is a failure and then endeavor to throw the whole blame for the failure on the shops, whereas they are really as much to blame as the shops for not reporting the defect in good time.

There are some kinds of defects which often manifest themselves on a locomotive from the shops, which will disappear after a few days or a few weeks in ser-

centage of ordinary running failures, but there is a class of failure which cannot be guarded against by any such regulations. I mean failures due to faulty design and poor material. To deal with the failures of this kind is, obviously, the business of the engineering department, and its first and greatest effort should be to locate the prime cause of the failure. Very often, the actual part which fails is not the part which is at fault, and if we go ahead blindly and strengthen this

cause this trouble, and unless full particulars are given the real cause may be overlooked; but if the master mechanic will take particular care to describe the defect with all the symptoms, he will give the shop superintendent a chance to determine the seat of the trouble.

On taking over a locomotive from the shop after repairs, the operating department should keep a very sharp lookout for any defect which may be actually present, or beginning to develop, and these defects should be completely reported to the shop superintendent within 30 days of the date the locomotive goes

into service, and the operating department often makes the mistake of neglecting to report these defects, as they feel confident that the locomotive will come round to its work after a week or two in service. Very often their judgment proves correct, but the best policy in cases of this kind is to report the defect immediately, keep a strict watch on it and if no improvement is noticeable within a very short time the defect must be rectified to avoid any chance of locomotive failure.

The standard maintenance regulations in force on most roads, if faithfully carried out, will prevent a very large per-

centage of ordinary running failures, but there is a class of failure which cannot be guarded against by any such regulations. I mean failures due to faulty design and poor material. To deal with the failures of this kind is, obviously, the business of the engineering department, and its first and greatest effort should be to locate the prime cause of the failure. Very often, the actual part which fails is not the part which is at fault, and if we go ahead blindly and strengthen this

part, the evil will only break out in another place, very likely with worse results, so that the maxim of the engineering department should be first to find the absolute root of the trouble and then rectify it.

To determine the mileage that should be obtained from the different classes of locomotives, study and investigation would be required, and, in the writer's opinion, a minimum mileage requirement should be established for all sub-divisions for the various classes of locomotives according to service, after receiving a no. 1 or no. 2 repair—and if this is not done,

there is every possibility of locomotives being shopped for expensive repairs before actually required, while others, overdue for shopping on a basis of work done, remain in service, a source of trouble and expense to everybody. We make tests and establish standards as to tonnage, that locomotives of the same class shall haul and they are not arbitrary for all divisions irrespective of grades and curves—then why require a locomotive to make as much mileage with the same amount of repairs if in way freight service on a heavy division as in through service on a light division?

Locomotives in assigned service will, I am satisfied, make more mileage at less cost than those in the pool, and in a given time—say 18 months—the assigned locomotive will possibly make the greater mileage, due to its receiving more care and attention, which will keep it in continuous service; but in a rush of traffic for a short period the pooled locomotive will make the greater mileage. Where traffic is fairly steady, I believe that the assigned system is the best, but where

of the number of locomotives due for shopping or shortly to become due for shopping, and a host of other information.

It will be noticed that in the mileage set for different classes of locomotives to accomplish, there is no provision made for the class of service in which the locomotive is engaged, and it is therefore necessary sometimes to reduce the mileage required for locomotives working under severe conditions, such as way-freight service on a heavy division. It is a difficult and unsatisfactory matter to make rigid laws in cases of this kind, and the rules are necessarily slightly elastic.

Co-operation between the various branches of the mechanical department depends very much more on the men than on the system, and if the heads of the different departments all pull together, with the idea of attaining greater efficiency, and their subordinates back them up to the full extent of their ability, it will not be difficult to get results. The operating department should be very careful and very complete with its reports of repairs required when sending loco-

## War May Put Railway Track Work on a New Basis.

As a result of war conditions railway maintenance of way seems likely to attain a higher plane and to be accorded the attention which its importance to railway service demands. Such result will come, however, only through a trying and strenuous period of change. This radical change has been foreshadowed for some time and is indicated anew by the proceedings of the recent Roadmasters' and Maintenance of Way Association's convention.

These war conditions have compelled attention particularly to the vexed problem of labor supply and labor efficiency in railway track work. A direct outcome of this is the establishment of higher wages and the introduction of new methods of obtaining and controlling labor. This, together with the growing tendency to distribute maintenance work over the entire year, instead of concentrating it within a few busy months, may mean that railway maintenance will become a field for permanent gangs rather than for the shifting and ever-changing forces which have been characteristic of American railway service.

Supplementary to this is the wider consideration and use of labor saving machinery and appliances, which is the opening of a broad field of development. Such devices serve two different purposes. They may release men for military or other essential service, and they may enable a small force to do as much work and as good work as a larger force without such equipment. Furthermore, they may result in better work and greater permanence with consequent reduction in maintenance and increase in economy. Appliances that contribute to the stability of the track may be classed as labor saving devices from the fact that they tend to reduce the amount of maintenance work required.

Conservation of material used in track is another improvement forced by the shortage due to war conditions. Special care must be given to the proper use of existing supplies in order to make the most of what we have and avoid all unnecessary requisitioning of new material which is badly needed for other purposes. Much old material which once would have gone for scrap can be made available for use again if proper care is given to it. That which cannot be utilized directly must be collected to add to our stores of raw material.—Engineering News Record.

**Railway Company's Liability for Damaged Goods.**—The C.P.R. has been ordered by a Quebec court to pay \$229 damages to M. W. Fisher, for damages to 4 packages of merchandise. They were delivered at Bellamy station on June 28, 1917, and they were left on the platform during a rainstorm. The company claimed that they were left in an exposed position by the consignor, and therefore it was not liable for any damage. The court held that the responsibility for caring for goods delivered to it for consignment belonged to the company directly they were delivered into its agent's possession.

**A. W. Smithers**, Chairman of the Board, G.T.R., is expected in Montreal shortly to make his annual inspection trip over the line. It is reported that during his visit he will discuss with the Dominion Government the question of the acquisition of the G.T.R. and the G.T. Pacific Ry. for the Dominion.

### CANADIAN GOVERNMENT RAILWAYS. REPORT OF SHOP REPAIRS REQUIRED.

heavy fluctuations in traffic have to be met, it might entail too great a capital outlay. I have known a locomotive in assigned service, when the locomotive man was taking an interest in his work, to make 55% more mileage than a locomotive of the same class, in the same service and division, in the pool.

The movement of power from one division to another should be done only under the advice of the motive power department, i.e., as far as selection of locomotives of the same class is concerned, otherwise it would possibly result in some locomotive houses having a high percentage of power over the shopping period and other with a similar proportion of power just out of the shop.

In order that we may have a comprehensive idea of the condition of our power at all times, the monthly statement reproduced herewith, showing the monthly mileage report of locomotives tributary to Moncton shops at June 1, 1918, has proved to be of considerable value. The form is self-explanatory and it is easy to get an idea of the condition of any particular locomotive, of the general con-

dition of a particular class of locomotive, motives to the shop, and should promptly report any defects in engines turned out of the shop. The shops department should work conscientiously, with the idea of making all locomotives good for their full mileage, and should pay special attention to any peculiar or unusual defects reported by the operating department. The engineering department should be ready at all times with advice and assistance to the shops and operating departments, and when investigating any defects should spare no pains to get right at the root of the trouble before attempting to eliminate it.

The foregoing paper was to have been read before the Canadian Railway Club in Montreal early in October, but owing to the influenza epidemic, its reading was postponed until the November meeting.

The Railway Y.M.C.A. at Field, B.C., was opened Oct. 2 in the building occupied formerly by the C.P.R. as the Mount Stephen Hotel. It has 55 bedrooms, with dining and luncheon rooms in connection.

## Canadian Pacific Railway Commercial Telegraphers Wages, Etc.

Canadian Railway Board of Adjustment, no. 1, gave the following decision Sept. 13, on the points at issue between the C.P.R. and its commercial telegraphers, after hearing arguments of each party to the controversy:—

1. Definition of "Commercial Telegraphers" and rates for Morkrum operators. Article 1 as proposed by the employees is amended as follows:—

"1. Employees assigned to the commercial telegraph service, whether operated by the Morse system, telephone or any automatic device of any character, or who are required to devote any portion of their time to the transmission or receiving of telegraph matter by any device whatsoever (not including agents, wire chiefs, traffic supervisors or traffic chiefs having authority to hire or discipline employees) will be considered commercial telegraphers within the meaning of this schedule. This does not apply to employees handling such matter by telephone during the act of filing for transmission or delivery.

"2. Morse telegraphers, when not required to work as such, shall, if competent, have the right to operate any automatic device for the purpose of transmitting or receiving telegraph matter at the rate they were receiving in optional group as Morse operators in the office affected. Seniority shall govern."

Rate for Morkrum operators. Article 8, Clause 2, amended as follows:—"The rate for Morkrum employees shall be \$75 a month for the first year's service and \$85 a month thereafter."

Minimum performance. Article 6, clause 4, amended as follows:—"The average minimum performance on all Vancouver-Winnipeg, Montreal-Winnipeg, Montreal-Vancouver and Toronto-Winnipeg circuits, not including Morkrum operators, shall be 30 messages an hour, and on all other first class circuits 33 messages an hour, allowing 30 words to count as one message in case of press, and 20 shall be counted as one message in r.s. business and night lettergrams. Chief operators and traffic chiefs shall determine the carrying capacity of the circuit, and any loss through interruption shall not be charged against the telegrapher's average."

2. Working hours. Article 6, clause 1, of present schedule amended as follows:—"At offices where two or more telegraphers are employed, the hours of duty shall be as follows: Eight hours shall constitute straight day duty, beginning and ending between 7 a.m. and 6 p.m. Seven hours shall constitute all night duty, beginning at or later than 8 p.m. Seven and a half hours shall constitute all other tricks. No trick shall be split more than once or extended over 12 hours. At all other offices the hours of duty shall be 10 consecutive hours, including one hour for lunch."

3. Overtime rate. Article 6, clause 3, of the present schedule reads:—"Overtime will be computed at the rate of 7 hours a day." The foregoing clause is amended as follows:—"Overtime accruing within 8 hours' service shall be paid for pro rata. Overtime after 8 or 9 hours' service, as the case may be, shall be paid for at time and one-half."

4. Inclusion of telegraph chiefs in schedule. The following words are inserted in article 1, clause 1, after the word "whatsoever":—"Not including agents, wire chiefs, traffic supervisors or

traffic chiefs having authority to hire or discipline employees."

5. Interpretation of McAdoo award. The board decided that neither of the bases submitted by the contending parties for rates in percentage offices was a correct application of the McAdoo award. The board also found it impossible to strictly apply the McAdoo award, on account of the changed conditions in the offices affected since 1915. On request of the parties to the dispute, the board established a basis for the readjustment of rates in these offices as follows:—

Vancouver Office—	Basic rate.	McAdoo award.
30% .....	\$109 a month.	\$131.75 a month.
30% .....	94 a month.	126.75 a month.
30% .....	88 a month.	121.75 a month.
Toronto Office—		
30% .....	90 a month.	123.25 a month.
30% .....	84 a month.	117.50 a month.
20% .....	78 a month.	109.98 a month.
20% .....	Optional.	
10% .....	Optional.	

Minimum rate of \$85 a month shall be paid to Morse telegraphers in all percentage offices in both east and west.

Duration of agreement.—Agreement is effective May 1, 1918, to continue for one year from that date in so far as it applies to wages. Agreement, in its pertinence to rules, shall become effective Oct. 1, 1918, and shall continue in effect both as to wages and rules until a rate not later than April 30, 1919, subject to termination thereafter upon service of 30 days' notice by either party.

Application of overtime rates and rules.—While the specific rates of pay named herein will be retroactive to May 1, 1918, the special overtime provisions established under this award will be effective as of Oct. 1, 1918. Overtime hours worked between May 1 and Sept. 30, 1918, will be paid for at the increased rates on the basis of rules heretofore in effect.

### What Government Control of Railways is Costing the United States.

Since April 1, 1918, the Director General of U.S. Railroads has advanced to railway companies \$294,845,170, exclusive of the current earnings of the roads applied directly by the individual roads to their current expenses and corporate needs. This amount went to 85 different roads or systems. The disbursements for September aggregated \$52,993,750.

Of the total disbursed to Oct. 1, \$209,347,910 was taken from the \$500,000,000 revolving fund, and \$85,497,260 came from the surplus earnings of various roads which were turned over to the Director General by the limited number of roads whose receipts for the period exceeded their requirements.

The total amount turned over to the Director General for the common fund from April 1 to Oct. 1 by roads reporting surplus earnings was \$113,000,000. To this should be added \$10,419,944 received from the new American Railway Express Co., making the total receipts from railway and express companies for the period \$123,419,944.

Of the \$113,000,000 turned over by the roads, \$64,507,660 went back to roads temporarily making the deposits with the Director General, these same roads subsequently calling upon the Railroad Administration for advances considerably in excess of the deposits which they had thus

temporarily turned over. Among the companies which have made deposits for the common fund during this period which have not asked for the refund of any portion of the funds deposited were the Northern Pacific Ry., which deposited \$2,500,000; the Pere Marquette Ry., \$1,500,000, and the Pullman Car Lines, \$1,000,000.

Among the advances made the railways up to Oct. 1, 1918, were the following:—

New York, New Haven & Hartford...	\$48,464,000
Pennsylvania .....	43,600,000
New York Central .....	42,920,000
Chicago, Milwaukee & St. Paul .....	16,725,000
Baltimore & Ohio .....	16,500,000
Illinois Central .....	13,775,000
Erie .....	10,990,000
Chicago, R. I. & Pacific .....	7,700,000
Southern Pacific .....	7,500,000
Southern .....	5,940,000
Chicago, Bur. & Quincy .....	5,800,000
St. Louis-San Francisco .....	5,698,000
Union Pacific .....	5,000,000
Denver & Rio Grande .....	4,400,000
Missouri Pacific .....	3,550,000
Lehigh Valley .....	3,500,000
Delaware & Hudson .....	3,500,000
Chicago & Northwestern .....	3,300,000
Wabash .....	3,225,000
Buffalo, Rochester & Pittsburgh .....	2,600,000
Philadelphia & Reading .....	1,400,000
Chicago & Alton .....	1,400,000
Minneapolis & St. Louis .....	1,350,000
Chicago, St. Paul, Minneapolis & Omaha .....	1,350,000
Grand Trunk Western .....	621,000
Boston & Maine .....	550,000
Chicago Great Western .....	507,660
Minneapolis, St. Paul & Sault Ste. Marie .....	350,000
Bangor & Aroostook .....	300,000
Central Vermont Ry. .....	285,000
Duluth, South Shore & Atlantic .....	150,000
Rutland .....	116,000
Maine Central .....	100,000

In addition to the above sums advanced the railway companies directly, the Director General has advanced \$30,660,255 on account of orders placed by him for locomotives and cars now under construction.

The payments shown in the above table are exclusive of very large amounts which were taken from the earnings of the roads between Jan. 1, 1918, and July 1, by the various railway companies to meet their interest and dividend requirements, and for other corporate purposes. The total funds therefore which the railway corporations have received since Jan. 1 from the Director General, and from the operations of the properties, and current balances, will reach approximately \$1,000,000,000.

The current operating expenditures and taxes of the railway lines which the Director General has also paid during the same period are estimated at between \$3,000,000,000 and \$3,500,000,000.

Railway Lands Patented.—Letters patent were issued during September, in respect to Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Alberta & Great Waterways Ry. ....	6.92
Calgary & Edmonton Ry. ....	797.83
Canadian Northern Ry. ....	480.00
Canadian Pacific Ry. grants .....	480.98
Canadian Pacific Ry. roadbed and station grounds .....	23.90
Edmonton, Dunvegan & British Columbia Ry. ....	82.53
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	940.10
Total .....	2,757.31

Maintenance of Way Flagging Rules for Impassable Track.—Amendments to these rules were published in full in our last issue. Two typographical errors occurred in our reproduction, one being in paragraph 5, which should have referred to trains stopped by red signal, as per rule 3 (b), and not as per rule 3 (c); and the other in paragraph 9, referring to the use of a signal device, for displaying signals to be provided under rules 3 (b) and 8, which should have read rules 3 (b) and 6.

# Wages of Clerical, Station and Similar Forces on Railways.

At a meeting of the Canadian Railway War Board's Administrative Committee Sept. 30 it was decided to put into effect as from Sept. 1, 1918, the rates of pay and conditions as outlined in Supplement 7 to General Order 27 of the Director General of the United States Railroad Administration, on the basis of the interpretations as outlined below. The supplement is subject to some further interpretations on points which are not yet altogether clear, but in order to avoid delay in applying increased rates of pay, the supplement is to be made effective as outlined, and employees have been advised accordingly.

## CLERKS AND MISCELLANEOUS EMPLOYEES.

Effective Sept. 1, superseding General Order 27, and in lieu thereof, as to employees herein named, the following rates of pay and rules for overtime and working conditions for all clerical forces in all departments, and for certain employees in stations, storage and terminal warehouses, docks, storehouses, shops and yards, upon railroads under federal control, are hereby ordered:

**Article 1—Rates of Pay.**—(a) For all employees who devote a majority of their time to clerical work, of any description, including train announcers, gatemen, checkers, baggage and parcel room employees, train and engine crew callers, and the operators of all office or station equipment devices (excepting such as come within the scope of existing agreements or those thereafter negotiated with the railroad telegraphers), establish a basic minimum rate of \$62.50 a month; and to this basic minimum rate and all rates of \$62.50 and above, in effect as of Jan. 1, 1918, prior to the application of general order 27, add \$25, a month, establishing a minimum rate of \$87.50 a month.

**Interpretation:**—This clause includes:—All clerical forces, train announcers, station gatemen, freight shed checkers, car checkers, freight shed car service men, baggage and parcel room employees, train and engine crew supervisors. This clause does not include any employees covered in the telegraphers' schedule, clerical forces under 18 years of age, call boys (see article 6). Pending the receipt of more definite information, an increase of \$25 will be applied to the established rates of all positions as of Jan. 1, 1918. It is understood that in a few instances this may produce decreases from rates approved under the original application of general order 27.

(b) This order shall apply to chief clerks, foremen, sub-foremen and other similar supervisory forces of employees herein provided for.

**Interpretation:**—This clause covers chief clerks, freight shed foremen, sub-foremen, traffic supervisors, travelling auditors, travelling freight and passenger agents and positions of similar character.

(c) For office boys, messengers, chore boys, and other employees under 18 years of age, filling similar positions, and station attendants, establish a basic minimum rate of \$20 a month, and to this basic minimum rate and all rates of \$20 a month and above, in effect as of Jan. 1, 1918, prior to the application of general order 27, add \$25 a month, establishing a minimum rate of \$45 a month.

**Interpretation:**—This clause includes office boys, messengers, chore boys, clerical forces under 18 years of age, station

and waiting room attendants regardless of age. This clause does not include employees covered by telegraphers' schedule (see clause A, article 1), charwomen, "red cap" porters, call boys (see articles 6 and 9). This clause provides for an increase of \$25 a month over the rate in effect on Jan. 1, 1918, and establishes a minimum of \$45 a month.

(d) For all other employees, not otherwise classified, such as janitors, elevator and telephone switchboard operators, office, station and warehouse watchmen, establish a basic rate of \$45 a month, and to this basic minimum rate, and all rates of \$45 a month and above, in effect as of Jan. 1, 1918, prior to the application of general order 27, add \$25 a month, establishing a minimum rate of \$70 a month.

**Interpretation:**—This clause includes janitors, elevator operators, telephone switchboard operators, watchmen (office, station and warehouse). This clause provides for an increase of \$25 a month over the rates in effect on Jan. 1, 1918, and establishes a minimum of \$70 a month.

(e) The same increases provided for in sections a, b, c and d of this article shall apply to employees named therein paid on any other basis.

**Interpretation:**—This permits the continuation of the present practice of paying employees on monthly, daily and hourly or any other basis, provided that increases on the basis of \$25 a month, 96c a day or 12c an hour are added to the rates in effect at Jan. 1, 1918.

(f) The wages for new positions shall be in conformity with the wage for positions of similar kind or class where created.

**Article 2, Stationary engineers (steam), firemen and power house oilers.**—(a) For all stationary engineers (steam), establish a basic minimum rate of \$85 a month and to this basic minimum rate, and all rates of \$85 and above, in effect as of Jan. 1, 1918, prior to the application of general order 27, add \$25 a month, establishing a minimum rate of \$110 a month.

(b) This order shall apply to chief stationary engineers.

**Interpretation:**—For chief stationary engineers and all stationary engineers (steam), this clause provides for an increase of \$25 a month over the rates in effect on Jan. 1, 1918, and establishes a minimum of \$110 a month.

(c) For all stationary firemen and power house oilers, establish a basic minimum rate of \$65 a month, and to this basic minimum rate, and all rates of \$65 and above, in effect as of Jan. 1, 1918, prior to the application of general order 27, add \$25 a month, establishing a minimum rate of \$90 a month.

**Interpretation:**—For stationary firemen and power house oilers this clause provides for an increase of \$25 a month over the rates in effect on Jan. 1, 1918, and establishes a minimum of \$90 a month.

**Article 3—Locomotive Boiler Washers.** For all locomotive boiler washers who were on Jan. 1, 1918, prior to the application of general order 27, receiving less than 26c an hour, establish a basic minimum rate of 26c an hour, and to this basic minimum rate, and all hourly rates of 26c and above, add 12c an hour, establishing a minimum rate of 38c an hour, provided that the maximum shall not exceed 50c an hour.

**Interpretation:**—Covered by Canadian

Railway War Board Wage Agreement no. 1, article 7, clause B.

**Article 4—Power Transfer and Turntable Operators.**—For all operators of power driven transfer and turntables who were on Jan. 1, 1918, prior to the application of general order 27, receiving less than 21c an hour, establish a basic minimum rate of 21c an hour, and to this basic minimum rate, and all hourly rates of 21c and above, add 12c an hour, establishing a minimum rate of 33c an hour, provided that the maximum shall not exceed 45c an hour.

**Interpretation:**—Operators of power driven transfer tables are covered by Canadian Railway War Board Wage Agreement No. 1, article 7, clause E. For employees regularly assigned to operate power driven turntables, this clause provides for an increase of 12c an hour over the rates in effect on Jan. 1, 1918, and establishes a minimum of 33c an hour and a maximum of 45c an hour.

**Article 5—Shop, roundhouse, station, storehouse and warehouse employees (except employees provided for in awards).**—(a) For all laborers employed in and around shops, roundhouses, stations, storehouses and warehouses (except employees provided for in harbor awards), such as engine watchmen, and wipers, fire builders, ashpit men, boiler washer helpers, flue borers, truckers, stowers, shippers, coal passers, coal chute men, etc., who were on Jan. 1, 1918, prior to the application of general order 27, receiving less than 19c an hour, establish a basic minimum rate of 19c an hour, and to this basic minimum rate, and all hourly rates of 19c and above, add 12c an hour, establishing a minimum rate of 31c an hour, provided that the maximum shall not exceed 43c an hour.

**Interpretation:**—This clause includes engine watchmen, engine wipers, fire builders, ashpit men, boiler washer's helpers, flue borers, coal passers, coal chute men, hostler's helpers, truckers, stowers, shippers, coopers, derrick men (freight yard), car sealers, freight shed car service men's helpers, employed in and around shops, roundhouses, stations, storehouses and warehouses, and provides for an increase of 12c an hour over the rates in effect on Jan. 1, 1918, and establishes a minimum of 31c an hour and a maximum of 43c an hour.

(b) For all common labor in the departments herein referred to and not otherwise provided for, who were on Jan. 1, 1918, prior to the application of general order 27, receiving less than 16c an hour, establish a basic minimum rate of 16c an hour, and to this basic minimum rate and all hourly rates of 16c and above, add 12c an hour, establishing a minimum rate of 28c an hour, provided that the maximum shall not exceed 40c an hour.

**Interpretation:**—For all unclassified labor employed in and around shops, roundhouses, stations, storehouses and warehouses, this clause provides for an increase of 12c an hour over the rates in effect on Jan. 1, 1918, and establishes a minimum of 28c an hour and a maximum of 40c an hour.

**Article 6—Monthly, Weekly or Daily Rates.**—For all monthly, weekly or daily rated employees, in the departments herein referred to, and not otherwise provided for, increase the rates in effect as of Jan. 1, 1918, prior to the application of general order 27, on the basis of \$25 a

month.

**Interpretation:**—This article includes chief draftsmen, draftsmen, call boys, "red cap" porters and charwomen (except as covered by article 9). For those and all other monthly, weekly or daily rated employees in the departments covered by Supplement 7, and not otherwise provided for, this article provides for an increase on the basis of \$25 a month over the rates in effect on Jan. 1, 1918. This article does not include restaurant help, sleeping, parlor and dining car employees, when employed on cars in train service. To these employees, general order 27 will apply except as provided by supplement 2.

**Article 7—Maximum Monthly Wage.**—No part of the increases provided for in this order shall apply to establish a salary in excess of \$250 a month.

**Article 8—Preservation of Rates.**—(a) The minimum rates, and all rates in excess thereof, as herein established, and higher rates which have been authorized since Jan. 1, 1918, except by general order 27, shall be preserved.

**Interpretation:**—As already stated, it is understood that in a few cases, this may produce decreases from rates approved under the original application of general order 27. This clause requires the maintenance permanently of rates established for positions as of supplement 7. If, however, the duties required in any position are changed, the compensation for the position may be changed in conformity therewith. (See article 1, clause f).

(b) Employees temporarily or permanently assigned to higher rated positions, shall receive the higher rates while occupying such positions; employees temporarily assigned to lower rated positions shall not have their rates reduced.

**Article 9—Exception.**—The provisions of this order will not apply in cases where amounts less than \$30 a month are paid to individuals for special service which only takes a portion of their time from outside employment or business.

**Article 10—Hours of Service.**—Eight consecutive hours, exclusive of the meal period, shall constitute a day's work.

**Interpretation:**—This article definitely establishes the 8-hour day, and when and where practicable the working hours of the day for all classes of employees covered by supplement 7 should be limited to 8 consecutive hours, exclusive of the meal period. Regular working hours for the various classes of employees at the different points should be established and reasonable notice of any change (not less than 40 hours) should be given.

In view of the fact that supplement 7 does not clearly set forth how monthly or daily rates are to be arrived at for the basic 8-hour day, pending the issue of any further interpretation, monthly or daily rates in effect as of Jan. 1, 1918, covering more than 8 hours service per day, should be converted to an 8-hour basis and increases of \$25 a month and 96c a day respectively added thereto, resulting rates to cover 8 hours service a day. The examples shown below are worked out on this basis. This basis is justified by the language of article 5, which for hourly rated men provides increased compensation per hour on rates employees were receiving per hour as of Jan. 1, 1918.

The principle of converting monthly and daily rates to an 8-hour basis is confirmed by the method set forth in article 3, general order 27, for applying basic 8-hour day rules.

## EXAMPLES.

**Method of Applying Basic 8-hour Day Rules.**—

1. Position which on Jan. 1, 1918, paid \$2 a 9-hour day. Old rate for 9 hours service \$2; old rate for 8 hours 8 9 of \$2—\$1.78; new rate for 8-hour basic day \$1.78, plus 96c (8 hours at 12c)—\$2.74. If employee continues to work 9 hours a day wages would be \$2.74 plus 1 hour overtime at 34<sup>1</sup>/<sub>2</sub>c (1 8 of \$2.74)—\$3.

2. Position which on Jan. 1, 1918, paid \$2.40 a 10-hour day. Old rate for 10 hours service \$2.40; old rate for 8 hours (8 10 of \$2.40)—\$1.92; new rate for 8-hour basic day \$1.92, plus 96c (8 hours at 12c)—\$2.88. If employee continues to work 10 hours a day, wages would be \$2.88, plus 2 hours overtime at 36c (1 8 of \$2.88) 72c—total \$3.60.

3. Position which on Jan. 1, 1918, paid \$75 a month working 10 hours a day for 26 working days. Old rate for month's service \$75; old rate for 8 hours (8 10 of \$75)—\$60; new rate per month for 8-hour basic day (\$60, plus \$25)—\$85. If employee continues to work 10 hours a day wages would be \$85 plus 52 hours overtime at 40.6c (\$85 divided by 200 hours) \$21.25—total \$106.25.

4. Position which on Jan. 1, 1918, paid \$100 a month, working 11 hours a day for 31 working days. Old rate for month's service \$100; old rate for 8 hours (8 11 of \$100)—\$72.73; new rate per month for 8-hour basic day (\$72.73 plus \$25)—\$97.73. If employee continues to work 11 hours a day wage would be \$97.73, plus 62 hours overtime at 39.4c. (\$97.73 divided by 248 hours) and 31 hours overtime at 59.1c (one and one-half times 39.4c) \$42.75—total \$140.

If we consider a 30-day month in place of a 31-day month, as above, and the employee continues to work 11 hours a day, wages would be \$97.73, plus 60 hours overtime at 40.7c (\$97.73 divided by 240 hours and 30 hours at 61.1c (one and one-half times 40.7c) \$42.75—total \$140.48.

**Article 11—Overtime and Calls.**—(a) Where there is not any existing agreement or practice more favorable to the employee, overtime shall be computed for the ninth and tenth hour of continuous service, pro rata on the actual minute basis and thereafter at the rate of time and one-half time. Even hours will be paid for at the end of each pay period, fractions thereof will be carried forward.

**Interpretations:**—This clause requires the payment of overtime after 8 hours work on any day for all classes of employees covered by supplement 7, but only at a pro rata rate (except where there is an existing agreement or practice more favorable to the employee for the ninth and tenth hours of continuous service, exclusive of the meal period, and at the rate of time and one-half after 10 hours work. (See article 14, clause a). Pay for overtime should not be allowed unless specifically ordered to be worked.

With reference to the last sentence in clause (a), it is permissible and preferable to pay for the actual hours and fractions thereof complete at the end of each pay period, instead of carrying forward the fractions of hours.

(b) When notified or called to work outside of established hours, employees will be paid a minimum allowance of three hours.

**Interpretation:**—This clause is applicable only when employees have been called after they have gone off duty for the day. When service is continuous, except for the meal period, this clause does not apply.

(c) Employees will not be required to suspend work during regular hours to absorb overtime.

**Article 12—Promotion and Seniority.**—(a) Promotions shall be based on ability, merit, and seniority, ability and merit being sufficient, seniority shall prevail, except, however, that this provision shall not apply to the personal office forces of such officers as superintendent, train-master, division engineer, master mechanic, general freight or passenger agent, or their superiors in rank and executive officers. The management shall be the judge, subject to an appeal, as provided in article 13.

(b) Seniority will be restricted to each classified department of the general and other offices and of each superintendent's or master mechanic's division.

(c) Seniority rights of employees referred to herein, to: (1) new positions, (2) vacancies, will be governed by paragraphs (a) and (b) of this article.

(d) Employees declining promotion shall not lose their seniority.

(e) Employees accepting promotion will be allowed 30 days in which to qualify, and failing, will be returned to former position without loss of seniority.

(f) New positions or vacancies will be promptly bulletined for a period of five days in the department where they occur. Employees desiring such positions will file their applications with the designated official within that time, and an appointment will be made within 10 days thereafter. Such position or vacancy may be filled temporarily pending an assignment. The name of the appointee will immediately thereafter be posted where the position or vacancy was bulletined.

(g) In reducing forces seniority shall govern. When forces are increased, employees will be returned to the service and positions formerly occupied, in the order of their seniority. Employees desiring to avail themselves of this rule must file their names and addresses with the proper official. Employees failing to report for duty or give satisfactory reasons for not doing so within seven days from notification will be considered out of the service.

(h) A seniority roster of all employees in each classified department, who have been in the service six months or more, showing name, date of entering the service, and the date of each promotion or change, will be posted in a place accessible to those affected.

(i) The roster will be revised and posted in January of each year, and shall be open to correction for a period of 60 days from date of posting on presentation of proof of error by an employee or his representative. The duly accredited representative of the employee shall be furnished with a copy of roster upon written request.

**Article 13—Discipline and Grievances.**—(a) An employee disciplined or who considers himself unjustly treated shall have a fair and impartial hearing, provided written request is presented to his immediate superior within 5 days of the date of the advice of discipline, and the hearing shall be granted within 5 days thereafter.

(b) A decision will be rendered within 7 days after the completion of hearing. If an appeal is taken it must be filed with the next higher official and a copy furnished the official whose decision is appealed within 5 days after date of decision. The hearing and decision on the appeal shall be governed by the time limits of the preceding section.

(c) At the hearing or on the appeal the employee may be assisted by a committee of employees or by one or more duly accredited representatives.

(d) The right of appeal by an employee or representative in regular order of succession and in the manner prescribed up to and inclusive of the highest official designated by the railroad, to whom appeals may be made, is hereby established.

(e) An employee on request will be given a letter stating the cause of discipline. A transcript of evidence taken at the investigation or on the appeal will be furnished on request to the employee or representative.

(f) If the final decision decrees that charges against the employee were not sustained, the record shall be cleared of the charge; if suspended or dismissed, the employee shall be returned to former position and paid for all time lost.

(g) Committees of employees shall be granted leave of absence and free transportation for the adjustment of difference between the road and the employees.

**Articles 12 and 13. Interpretation:**—It is intended that for employees not already covered by schedule agreements the spirit of the regulations should be applied. See note under article 15.

**Article 14—Rules for Application of this Order.**—(a) It is not the intention of this order to change the number of days a month for monthly paid employees. The increases a month provided herein shall apply to the same number of days a month which were worked as of Jan. 1, 1918.

(b) The pay of female employees, for the same class of work, shall be the same as that of men, and their working conditions must be healthful and fitted to their needs. The laws enacted for the government of their employment must be observed.

**Article 15—Interpretation of this Order.**—The rates of pay and rules here established shall be interpreted into existing agreements, and into agreements which may be reached in the future on the several railroads, and should differences arise between the management and the employees of any of the railroads to such interpretation, intent or application of this order, prior to the creation of additional railway boards of adjustment, such questions of difference shall be referred to the director of the division of labor for decision, when properly presented, subject always to review by the Director General. Agreements or practices, except as changed by this order, remain in effect.

**Interpretation:**—The Canadian Railway War Board has appointed a special committee, consisting of Geo. Hodge, Assistant to General Manager, Eastern Lines, C.P.R.; J. Coleman, Superintendent Car Department, G.T.R., and A. E. Crilly, Assistant to General Manager, Canadian Government Railways, to consider further interpretations of supplement 7 to general order 27 and make recommendations for uniform practice in connection therewith. If any questions arise on any railway as to the intent of this supplement or interpretations, no action should be taken until such questions have been referred to the Canadian Railway War Board. This committee will deal with these questions as submitted and copies of the questions and rulings thereon will be forwarded to all railways connected with the Canadian Railway War Board.

In the event of employees being unable

to adjust any differences with the heads of their departments in accordance with the method established by article 13, such differences may be referred to the Canadian Railway War Board for consideration and decision by this special committee.

### C.P.R. Scholarships at McGill University.

Five free scholarships, covering four years' tuition in chemistry, civil, mechanical or electrical engineering at McGill University, Montreal, are offered, subject to competitive examination, to apprentices and other employees enrolled on the C.P.R.'s permanent staff and under 21 years of age, and to minor sons of employees. The competitive examination, which will be the regular entrance matriculation examination provided for in the University's annual calendar, will be held at the University, and at other centers throughout Canada, in June, 1919. The candidates making the highest average, and complying with the requirements of admission, will be awarded the scholarships and have the option of tak-

ing any of the above courses. Scholarship will be renewed from year to year, to cover a period not exceeding four years, if, at the close of each session, the holder thereof is entitled, under the rules, to full standing in the next higher year. In case a scholarship holder finds it necessary to interrupt his course for a year or more, notice must be given at the close of the session to the company and to the Dean of the Faculty of Applied Science of the University, in order that the scholarship may be open to other applicants. In order to establish prior claim to the next available scholarship, notice of the student's intended return must be given to the company and to the Dean of the Faculty of Applied Science, not later than Jan. 1, preceding the opening of the session in which such scholarship will be available. Applications for certificates entitling eligible persons to enter the competition should be addressed to C. H. Buell, Staff Registrar and Secretary, Pension Department, C.P.R., Montreal. Copies of the annual calendar, containing the conditions of admission and announcement of courses may be obtained upon application to the Registrar, McGill University, Montreal.

## Canadian Pacific Railway's Honor Roll 38.

Bailey, Herbert M.	Car inspector	Hardisty	Presumed dead
Bain, Thomas	Porter	Fort William	Presumed dead
Banks, James	Car repairer	Toronto	Wounded
Bedford, Norman L.	Clerk	Winnipeg	Wounded
Breen, Joseph	Locomotive fireman	Kenora	Died of wounds
Bissett, Roderick	Wiper	Fort William	Died of wounds
Bugler, Herbert S.	Clerk	Ogden shops	Wounded
Buttimore, Thomas H.	Accountant	Banff	Wounded
Cable, Donald J.	Travelling pass. agent	Montreal	Wounded
Callard, Charles N.	Checker	Port McNicoll	Wounded
Cameron, Daniel G.	Clerk	Montreal	Wounded
Campbell, William	Section man	McTaggart	Wounded
Cassidy, Thos. J.	Porter	Campbell's Bay	Wounded
Caucutt, Edward	Yardman	Kenora	Wounded
Cleaver, Chas. H.	Section foreman	Furrer	Wounded
Comber, Ronald	Wiper	Moose Jaw	Wounded
Curtis, Bertie	Wiper	Fort William	Killed in action
Douglas, Archie	Coach carpenter	Winnipeg shops	Wounded
Drake, Leslie A.	Clerk	Montreal	Died of wounds
Duval, Leo M.	Draftsman	Kootenay Central Ry.	Wounded
Eagleson, Edgar	Locomotive man	Winnipeg	Died of wounds
Elliott, George F.	Checker	Vancouver	Wounded
Falconer, Wm. L.	Assistant agent	Morden	Wounded
Ferrin, Wm. R.	Accountant	Calgary	Killed in action
Flynn, Edward	Wiper	Weyburn	Killed in action
Gibson, Albert	Car checker	Fort William	Killed in action
Gough, Harry	Porter	Edmonton	Wounded
Gow, James	Bridgeman	British Columbia Dist.	Wounded
Griffiths, Jack B. M.	Shed foreman	Red Deer	Wounded
Hardy, Arthur T.	Waiter	B.C. Coast Strs.	Wounded
Hartley, Edmund H.	Section man	Manor	Wounded
Hutchison, W.	Clerk	Portage la Prairie	Died of wounds
Latimer, Hugh	Car repairer	West Toronto	Killed in action
Levisky, Percy	Clerk	Toronto	Wounded
McCreary, Harry E.	Sleeping car conductor	Montreal	Died of wounds
McDonald, Leonard H.	Clerk	Ottawa	Believed drowned
McFadden, Ernest V.	Clerk	Brandon	Wounded
McKay, Roderick	Locomotive man	Kamloops	Wounded
McLean, Gordon D.	Barrister	Calgary	Killed in action
McLeod, Benjamin	Constable	Winnipeg	Killed in action
McTague, Robert M.	Asst. extra gang foreman	Algonia District	Died of wounds
Malpass, Wilfred A.	Porter	Vancouver	Died of wounds
Metcalfe, Alex.	Porter	Medicine Hat	Gassed
Moody, Ernest	Helper	Soo	Wounded
Moore, Stanley G.	Operator	Esquimalt	Wounded
Morrison, Alfred L.	Trainman	Kenora	Wounded
Nelson, Thos. Wm.	Trainman	Edmonton	Presumed dead
Nickleby, Theodore P.	Wiper	Roseberry	Died of wounds
Ireston, Samuel	Laborer	Parkland	Killed in action
Purchase, W. H.	Clerk	Vancouver	Wounded
Reid, Ephraim J.	Conductor	Sutherland	Died of wounds
Ritchie, John	Locomotive fireman	Chapleau	Wounded
Sansom, Joseph	Blacksmith's helper	Winnipeg	Wounded
Scriven, Lorne	Shed foreman	Orillia	Wounded
Sellick, Wm.	Pipe fitter	Hochelaga	Died of wounds
Shipman, Lewis A.	Apprentice	Winnipeg shops	Believed drowned
Shrubshall, Frank	Hostler	Lambton	Killed in action
Sincock, Samuel	Fitter's helper	Winnipeg	Killed in action
Smith, Harold	Clerk	London, Eng.	Killed in action
Stubbs, Robert	Bridgeman	Fort William	Wounded
Turiff, John G.	Assistant agent	Rapid City	Killed in action
Walker, Hugh C.	Clerk	Winnipeg	Wounded
Watthew, John	Fitter's helper	West Toronto	Killed in action
Wheeler, Hy. A.	Clerk	London, Eng.	Killed in action
Willson, George H.	Wiper	Moose Jaw	Wounded
Wilson, William	Wiper	Medicine Hat	Wounded
Wren, Wm.	Sty. fireman	Ignace	Wounded

Shown on honor lists to date:—killed, 731; wounded, 1,575; total, 2,306.

# The Transportation Features of the Coal Situation in the Prairie Provinces.

By C. E. Stone, Secretary, Western Administrative Sub-Committee, Canadian Railway War Board.

In dealing with this question, I will confine myself mainly to the situation as it exists in the western prairie provinces, as it is in these provinces that it assumes its most acute form. In the eastern and mountain sections of the Dominion, except in the larger cities, wood can be, and is, used to a large extent to relieve a shortage in the coal supply, but on the prairies there is nothing to take the place of coal. Straw is to some extent used for firing threshing engines, but it is not adaptable in its present form for winter use. Therefore in winter, if the supply of coal is short, the prairie town and country dweller is faced with a desperate situation. It is chiefly to the credit of the railways that there has not in past years been much suffering due to a lack of this necessary commodity, as it can be stated generally, that with the exception of the United States coal which has been annually brought in and stored by the railways at the lake head, and the coal which the railways have stocked at various points for their own use, there has been in Western Canada, practically no stocking of coal during months favorable for its transportation, to provide for severe weather conditions. This has placed upon the railways the burden of handling a heavy coal tonnage during the worst weather, a tremendously difficult and costly operation.

In so far as Canada, east of the Great Lakes, is concerned, there are only two features which alter the situation to any extent over past years. The first is the enormous traffic with which the railways are now burdened, which of course adds to the difficulties experienced in handling coal, and second, the limitation in the allotment of U.S. coal to that territory, which will no doubt be reflected in an increased movement of wood in some sections. The situation has not altered in British Columbia, where the comparatively limited demand is met locally. It is in Alberta, Saskatchewan and Manitoba, and particularly in the two latter, that the situation takes on its difficult aspects. To a very large extent, Manitoba and eastern parts of Saskatchewan have in past years depended for their fuel on the supplies of anthracite brought in by lake and rail from the U.S. The transportation of the winter's coal supply from western mines places upon the railways a tremendously increased burden.

It is almost an impossibility to deal with this question statistically with any degree of accuracy. There are no statistical bases of comparison between the situation in Western Canada in past years and the situation as it exists today. In considering this matter from a transportation standpoint, I will take Winnipeg, the point which is most greatly affected by the change, as an illustration. During 1917, Winnipeg consumed a total of approximately 457,000 tons of commercial coal, of which about 215,000 tons were anthracite, 222,000 tons bituminous, and 20,000 tons lignite. The bituminous supply has not been greatly disturbed, but the Fuel Controller has stated that not more than 50% of last year's anthracite supply will be available this year, which means that, allowing for the difference in efficiency between anthracite and lignite, Winnipeg will have to receive from the western mines about 200,000 tons. As the railways cannot be expected

to maintain the movement at full capacity, after the commencement of the heavy grain movement, this means that from May 15 to Oct. 1, a period of 138 days, coal should have been coming into Winnipeg from the west at the rate of 50 cars a day. As a matter of fact, it has not been coming in anything like that quantity. During May, the average number of cars to arrive in Winnipeg daily was 13; in June, 29 cars, and in July, 27 cars. During the week ended July 14, there were shipped to Winnipeg from all mines in Western Canada, 217 cars of coal, an average of 31 a day. During the week ended July 21, there were shipped a total of 252 cars, an average of 36 a day. During the 10-day period ended July 31, there were shipped a total of 333 cars, an average of 33 a day.

While these figures are typical of a section of Manitoba, they are not so of Saskatchewan, where stocking of western coal has been fairly heavy, and into which province, shipments for the three weeks prior to July 31, averaged over 125 cars a day.

From May 15 up to the end of July, all the mines in Western Canada shipped to all points, of all classes of coal, a total of 1,238,000 tons, as compared with a total of 592,000 tons shipped in the same period last year, but the figures mean very little when it is remembered that last year, from early in May until about July 1, almost all the coal mines in Alberta had strikes on their hands. In addition, a very large proportion of the increase is made up of steam coal stocked for railway purposes.

Winnipeg's anthracite supply, brought in during the lake navigation period to the lake head, was, in railway movement, distributed over 8 months. By far the greater portion of it, however, was handled during the months in which the grain was moved to the lakes, giving the railways a westbound coal movement to Winnipeg, and to some extent beyond, corresponding with the eastern grain movement, and thus limiting in some measure, that bane of the transportation officer—empty car haulage. Now look at the situation created by the substitution of western coal for anthracite. This must be brought from mines located an average of 900 miles from Winnipeg. It must largely come down in a period of approximately four months. It must be handled in the same direction with the preponderance of traffic during the greater portion of the year, meaning an empty car hauled for nearly every car of coal brought in. Where to bring in a car of coal from Port Arthur or Fort William only meant a loaded car haul of 420 miles, to bring one in from the western mines means an empty car haul from Winnipeg west of 900 miles, and as during the grain shipping period, which extends over a considerable portion of the year, every car sent west from Winnipeg for coal loading necessitates an equivalent empty movement from the lake head to Winnipeg, the total empty haulage for each car of western coal brought to Winnipeg is 1,320 miles. Add to this the return loaded haul of 900 miles, and you have a mileage of 2,200 a car, or over five times the distance is covered to bring a car of coal to Winnipeg from the western mines than was covered to bring a car from the lake

head. The car efficiency is actually reduced by more than five times, because the western railways, between Winnipeg and the western mine territory, all operate through a section of prairie country, where the scarcity and poor quality of the water reduces locomotive efficiency, and makes railway operation at certain seasons very difficult and costly.

The greatest movement must be crowded into 4 or 5 months, because during the latter part of September and the months of October and November, when the bulk of the crop is moving out, the railways cannot undertake to move coal from the west in any quantity, and at the same time discharge their essential duty as grain carriers. The very fact that the bulk of the western coal must be moved during the summer, however, would, if taken advantage of, to a slight extent offset the disadvantages referred to, as that is the period when the railways in the west have usually had a surplus of men, power and cars, and weather conditions are most favorable to an uninterrupted movement.

Under the conditions created by the necessity for bringing the coal supply from the west, a feature upon which too much stress cannot be laid, is that of capacity loading of cars. Practically all of the railways in Canada, as a result of exhaustive tests, have increased the loading capacity of their cars beyond that formerly allowed, as high in some cases, as 20%, basing it upon the carrying strength of the axles. Loading cars with all they will carry, in the direction of the preponderance of traffic, increases transportation efficiency enormously, and the Canadian Railway War Board has been urging upon all shippers the importance of giving attention to this feature. It is one way in which the railways can be assisted by the shipping public to give better service to that public.

The railways were early in the field to assist in improving this season's fuel situation. Through the Canadian Railway War Board they have entered into all movements looking to a solution of the problem. On their behalf, Grant Hall, Chairman of the western administrative sub-committee of the board, at a meeting which was held in Calgary on Feb. 11, gave assurance that the railways would be prepared to handle all the coal offered up to the commencement of the grain movement, and W. P. Hinton, representing the administrative sub-committee, repeated this assurance at a meeting held in Ottawa on April 18, and they have not failed to do this. Steps were taken by the railways to begin at once to stock all the railway steam coal which the mines could turn out, in order to free railway facilities for handling domestic coal later on. Empty cars, which, accumulating in the east as a result of the winter all-rail grain movement, are usually moved west gradually throughout the summer, as traffic conditions permit, were in early spring handled west in train loads, and an uninterrupted full supply of cars has been maintained at all mines throughout the spring and summer, with a surplus always available to meet any needs which might arise.

It is not the intention to criticize the efforts of anyone else, but the movement of coal from the west has not, up to the present, been what the railways had

hoped for, and were led to expect. There are several reasons for this, chief among which, I imagine, are, first the difficulties experienced by the mines in securing labor, and in getting full time work from that available, and second the fact that certain of the western coals will not stand outdoor storing without deterioration, making dealers hesitate to stock it in any quantity. Consumers, notwithstanding repeated warnings, have not laid in as much as was hoped, due, in some measure, no doubt, to the difficulty in financing at once a whole or considerable portion of a season's supply.

More than any other large employers of labor, the railways have found it difficult to secure capable employees to take the place of those who either voluntarily

enlisted or were called to the colors. Those classes of employees whose duties are connected with the movement of trains must be of high standard, and some of them must be trained for years before they can be entrusted with the lives of passengers and fellow employees. Troop movements and heavy traffic of an emergent nature due to the war have made their demands on the railways. They have met these and will continue to meet them. If a coal shortage should develop this coming winter, it will not be because the railways have failed to do everything in their power to prevent it.

The foregoing paper was read before the Engineering Institute of Canada's Saskatchewan branch in Saskatoon recently.

## Marking and Addressing of Freight for Transportation Between Points in Canada.

The Canadian Freight Association issued the following circular Oct. 1:—

The attention of all concerned is directed to the following rules regarding marking and addressing of freight, framed for the purpose of minimizing, so far as possible, loss or miscarriage of the property.

1. Freight, when delivered to carriers to be transported at less than carloads, or any quantity ratings, must be marked in accordance with the following requirements and specifications, except as provided in rules 7 and 8, or in the Board of Railway Commissioners for Canada Regulations, for the transportation of explosives and other dangerous articles by freight.

2. (a) Each package, bundle, or loose piece of freight, except as provided for in rules 7, 8 and 9, must be plainly, legibly and durably marked by brush, stencil, marking crayon (not chalk), rubber type, metal type, pasted label (see note 1), tag (see note 2), or other method which provides marks equally plain, legible and durable, showing the name (not initials) of only one consignee, and (except as provided in rule 2 (b) of only one town or city, and province or state to which destined.

When consigned to a place of which there are two or more of the same name in the same province or state, the name of the county must also be shown.

When name and address of shipper is marked on freight, it must be prefixed by the word "From."

(b) When consigned to a place not located on the line of a carrier, each package, bundle, or loose piece required to be marked by this rule, must be marked with the name of the station at which the consignee will accept delivery, in addition to the name of final destination, if routed in connection with a water line via which there are no joint rates in effect, the name of the station at which delivery is to be made to such water line, must also be shown.

(c) When consigned "To order" each package must be so marked, and further marked with an identifying symbol or number which must be shown on shipping order and bill of lading.

Note 1. Labels must be securely attached with glue or equally good adhesive.

Note 2. Tags should be used only when the nature of the freight will not readily permit the use of labels, or other suitable marking. Tags must be made of metal, leather, cloth or rope stock or sulphite fibre tag board, sufficiently strong and

durable to withstand the wear and tear incident to transportation; and

When such cloth or board tag is tied to any bag, bale, bundle or piece of freight, it must be securely attached through a reinforced eyelet.

Tags used to mark wooden pieces or wooden containers must be fastened at all corners and centre, with large headed tacks or tag fasteners; or

Tags may be securely tied to wooden pieces when the freight would be injured by the use of tacks or tag fasteners.

Tags tied to bags, bales, bundles or pieces must be securely attached by strong cord or wire, except that when tied to bundles or pieces of metal, they must be securely attached by strong wire or strong tarred cord.

3. The marks on bundles, packages or pieces must be compared with the shipping order or bill of lading and corrections, if necessary, made by the shipper or his representative before bill of lading is signed by agent of the carrier.

4. Marks on bundles, packages, or pieces must correspond with those shown on shipping order or bill of lading. For example, on a shipment to Winnipeg, the package must be marked "Winnipeg," and not some other destination for which the goods may be ultimately intended. If packages are intended for reshipment, a special designating mark may be used for the guidance of those attending to the reforwarding, but only the destination given in the shipping order or bill of lading must be shown on the goods.

5. Old consignment marks must be removed or effaced by the shipper.

6. Freight in excess of full cars must be marked as required for less than carload freight.

7. Shipments of bar iron and steel must be marked as follows:—

All iron and steel bars five-eighths inch and under to be bundled; a tag to be placed on each bundle.

All iron and steel bars over five-eighths inch, in addition to each shipment being painted on end a distinctive color, to be tagged as follows:—

Shipment of 50 bars and under, 1 tag for every 5 bars.

Shipment of over 50 and under 100, 1 tag for every 10 bars.

Shipment of 100 or over, 1 tag for every 20 bars.

These tags to be fully addressed to consignee and destination and endorsed "Part of lot of 5, 10, 50, or 100, as the case may be, marked Red, Green, Yellow, etc.," in

accordance with the colors painted thereon.

Shipments of bars, in 5 ft. lengths or under, exceeding a value of 10c a pound, to be either boxed or crated.

8. (a) A shipment that fully occupies the visible capacity of car or that weighs 24,000 lb. or more, when shipped from one station, in or on one car, in one day, by one shipper, for delivery to one consignee, at one destination, need not be marked, except when for rail and water transportation, as provided in rule 9.

(b) L.c.l. shipments of cheese may be accepted with the factory brand plainly stencilled on the container, instead of name and address of consignee.

9. Each package, bundle or piece of freight, either in carloads or less than carloads, for transportation via rail and water, must be fully marked as required for less than carload freight, except for shipments of flour and other grain products, sugar, cement, and salt bearing standard brands or trade-marks.

10. Freight traffic for points in United States must be marked as required by the Official Classification and supplements thereto.

The proper marking and addressing of freight is as much in the interest of the shipper as of the carrier, as neglect in the addressing of packages may result in the loss or miscarriage of the goods.

If the above requirements and specifications are not complied with, freight will not be accepted for transportation.

## Coal Shipments From Sydney, N.S.

The Railways Department at Ottawa has issued the following statement:—"The Canadian Government Railways, between May and Sept. 12, carried 196,189 tons of coal from Sydney, N.S.

"From May 1 to Aug. 23, the Dominion Coal Co. shipped from Sydney 3,697 cars, 129,734 tons of coal, of which 1,440 cars, 55,934 tons, were on railways' account, and the balance, 2,257 cars, 73,800 tons, for private consumers. From Aug. 23 to Sept. 12, 564 cars, 21,382 tons, were shipped on railways' account, and 393 cars, 14,934 tons, for private consumption.

"Since Aug. 23, the output has increased from an average of 36 cars to an average of 63 cars per working day, due to the coal company having provided additional facilities for loading box cars.

"Shipments of both private and railway coal are consigned almost exclusively to places in Nova Scotia and New Brunswick, less than 2% of the total being consigned to other provinces.

"The car supply was adequate during the period covered by this report, and there are a large number of empties available in Nova Scotia to take care of shipments for some time to come.

"The movement of coal from Sydney is well in hand, although hampered to some extent by passing tracks in Cape Breton being congested with Newfoundland freight. Additional power has been transferred to that section of the railway to enhance the movement. Mikado and Santa Fe locomotives were transferred early in October, which will materially reduce the number of trains to be dispatched, thereby increasing the capacity of the railway in Cape Breton for prompt movement.

"In addition to rail shipments, 20,692 tons were forwarded to Halifax and 9,447 tons to St. John from Sydney in railway steamships and barges from May 1. This coal was consigned to the railway."

## Poles Bought in Canada in 1916 and 1917.

The statistics herein are based on reports received by the Interior Department's Forestry Branch from 294 buyers of poles in Canada in 1917. The purchasers consisted of 167 telephone companies, 89 electric light and power companies, 19 electric railways, 16 steam railways, and 4 telegraph companies. The statistics are divided into two main groups; those concerning steam railway, telegraph, and telephone companies, and those concerning electric railway, power and light companies.

There were 11,042 more poles purchased in Canada in 1917 than in 1916, an increase of 6.1%. Poles were cut from 13 different kinds of wood, and of these kinds eastern cedar composed 74.5% and western cedar 18.7%, a total of 93.2% of cedar. The species next in order was spruce, which made up 3.7% of the total. The number of poles cut from eastern and western cedar, spruce, jack pine, chestnut, ash, and oak increased, while all other species show decreases, except maple and poplar, which were not reported in 1916 and which reappear in the list in 1917. Douglas fir, which formed 1.4% of the poles in 1915, is not reported in 1916 nor 1917. The steam railway, telephone, and telegraph companies purchased 57.9% of the poles, compared with 74.6% in 1916 and 61% in 1915.

The average purchase price of all poles has varied as follows in recent years: 1913, \$2.22; 1914, \$2.33; 1915, \$2.52; 1916, \$2.34; 1917, \$2.65.

The prices in the tables are based on the cost at the point of purchase. Arbitrary factors, as farmers cutting poles for local lines, low prices caused by lack of transportation facilities, high prices caused by long hauls and demand for particular lengths, make specific prices irregular. Only where poles are used in large numbers can the values be taken as representative.

Canadian Economic Commission for Russia.—To act in conjunction with other allied countries, Canada has appointed an economic commission to assist in the economic restoration of Siberia, and to assist the people to secure the things required for the equipment and carrying on of necessary industrial projects. The persons appointed are:—C. F. Just, Chief Canadian Trade Commissioner in Russia; W. D. Wilgress, Canadian Trade Commissioner at Vladivostok; Lieut.-Col. J. S. Dennis, C.M.G., Red Cross Commissioner and Liaison Officer of the Canadian Siberian Expedition, and Assistant to the President, C.P.R.; and Ross Owen, C.P.R., Transportation Officer in Russia. The commission's duties cover the whole industrial, social and economic situation, including the necessary transportation facilities.

Pacific Great Eastern Ry. Passenger Service.—The West Vancouver, B.C., municipal council on Sept. 28 approved of this company's winter train schedule, as submitted by the management, for the section between North Vancouver and Whytecliffe, which was put in operation Oct. 3, and is being worked in connection with the West Vancouver ferry service. Nine trains are run daily from Monday to Friday, and 11 trains on Saturdays. The schedule includes trains at suitable times for shipyard workers and school children. The 30 days time limit on settlers' tickets has been abolished.

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

27667, Sept. 14.—Relieving Canadian Northern Ry. from providing further protection at King St., Pefferlaw, Ont.

27668, Sept. 16.—Authorizing Kettle Valley Ry. to build bridge across Similkameen River at Princeton, B.C.

27669, Sept. 16.—Approving Canadian Northern Ry. revised location in n. e.  $\frac{1}{4}$  Sec. 19, Tp. 21, Range 25, west 4th meridian, Alta., and rescinding order 27612, Sept. 4.

27670, Sept. 12.—Ordering Canadian Northern Ry. to build bridge over Serviceberry River, Alta., on right of way north of railway bridge.

27671, Sept. 16.—Approving Canadian Northern Ry. revised location in s. w.  $\frac{1}{4}$  Sec. 26 and s. e.  $\frac{1}{4}$  Sec. 26, Tp. 39, Range 10, west 5th meridian, Alta., and rescinding order 27620, Sept. 4.

27672, Sept. 17.—Authorizing McKim Tps., Ont., to make highway over C.P.R. at mileage 83.13, on Lot 11, Con. 5, McKim Tps.

27673, Sept. 16.—Authorizing C.P.R. to build spur for Alberta Stockyards Co., Calgary, Alta.

27674, Sept. 17.—Authorizing Ontario & Minnesota Power Co., until further order, to build and operate power line along dyke on water front at Fort Frances, Ont., subject to cancellation of such permission upon notice from Ontario Lands, Forests and Mines Department, use of such power line limited to company's own business, and prohibiting use for ordinary commercial purposes.

27675, Sept. 11.—Authorizing International Bridge & Terminal Co. to erect loading bunkers on Shelvin-Clarke Co.'s property at Fort Frances, Ont., for loading mill refuse to cars.

27676, Sept. 20.—Authorizing Canadian Northern Ry. to build spur for Crescent Collieries at mileage 15.36, Bienfait Subdivision, Alta.

27677, Sept. 18.—Authorizing C.P.R. to rebuild bridge 41.53 over North River, Lachute Subdivision, Que.

27678, Sept. 14.—Relieving G.T.R. from providing further protection at public road between Lots 9 and 10, Broken Front Concession, at Bowmanville, Ont.

27679, Sept. 18.—Authorizing G.T.R. to build spur for Dillon Crucible Alloys, Welland, Ont.

27680, Sept. 17.—Recommending to Governor in Council for sanction, General Rules and Instructions 1918, Niagara, St. Catharines & Toronto Ry.

27681, Sept. 19.—Authorizing G.T.R. to build spur for De Laval Co., Peterborough, Ont.

27682, Sept. 18.—Authorizing C.P.R. to build spur for Dominion Wire Manufacturing Co., Lachute, Que.

27683, Sept. 20.—Authorizing Canadian Northern Ry. to build spur for Robin Hood Coal Co., in n. w.  $\frac{1}{4}$  Sec. 21, Tp. 28, Range 19, west 4th meridian, Alta.

27684, Sept. 12.—Approving location of Grand Trunk Pacific Branch Lines Co.'s station, N.T.R. design A, at Lynden, Sask.

27685, Sept. 18.—Authorizing G.T.R. to build extension to siding for McColl Bros. & Co., Toronto.

27686, Sept. 18.—Approving agreement, Sept. 4, between Bell Telephone Co. and Sunderland Telephone Co., Ontario and York Counties, Ont., and rescinding order 23351, Feb. 23, 1915.

27687, Sept. 20.—Approving location of Grand Trunk Pacific Branch Lines Co.'s station at Central Butte, Sask.

27688, Sept. 16.—Ordering C.P.R. to carry out terms of order 26841, Dec. 11, 1917, by stopping train 821 at Oakville, Ont., when there are passengers for that point from Toronto.

27689, Sept. 16.—Approving agreement, Aug. 30, between Bell Telephone Co. and North Horton Telephone Association, Ltd., Renfrew County, Ont.

27690, Sept. 13.—Ordering Canadian Northern Ry. to cut down hedge and trim trees 12 ft. from ground at crossing of Sidney St., Trenton, Ont.

27691, Sept. 16.—Ordering G.T.R. southbound and C.P.R. northbound trains to connect at Inglewood Jet.; when either is late and there are passengers to connect with other train, last named to be held at least 10 minutes to enable connection to be made.

27692, Sept. 20.—Authorizing Saskatchewan Highways Department to make highway over C.P.R. station grounds and tracks at Lajord.

27693, Sept. 16.—Dismissing application of Board of Trade, Edmonton, Alta., for order directing Canadian Northern Ry. to appoint station agent at Legal, Alta., upon undertaking of C.N.R. to carry out order 26362, July 21, 1917.

27694, Sept. 16.—Authorizing C.P.R. to remove regular agent at Senate, Sask., caretaker to be appointed to see station is kept clean and heated for passengers on arrival and departure of trains, and care for L.C.L. freight and express matter.

27695, Sept. 16.—Authorizing C.P.R. to use Canadian Northern Ry. spur into Davidson &

Smith elevator, Fort William, Ont., switchmen to be appointed by C.N.R. to operate switch day and night; spur to be maintained by C.N.R.; wages of switchmen and maintenance of spur to be apportioned on a wheelage basis.

27696, Sept. 16.—Ordering Canadian Northern Ry. to erect third class station at Durban, Man., by Dec. 1.

27697, Sept. 21.—Amending order 27324, June 19, re London & Port Stanley Ry. spur on Bathurst St., London, Ont.

27698, Sept. 23.—Approving clearances at C.P.R. heated building for oil cars at Weston, Winnipeg.

27699, Sept. 23.—Authorizing C.P.R. to divert road allowance on northern boundary of n. e.  $\frac{1}{4}$  Sec. 10, Tp. 3, Range 4, west 2nd meridian, and to close within limits of right of way diverted portion of road allowance at mileage 131.2, Estevan Subdivision, Sask.

27700, Sept. 23.—Approving Canadian Northern Ry. revised plan of bridge across Trent River, at Trenton, Ont., and rescinding order 12356, Nov. 23, 1910.

27701, Sept. 13.—Amending order 15377, Nov. 7, 1911, re provision of gates by G.T.R. at highway west of Cornwall station, Ont.

27702, Sept. 16.—Approving North Mountain Ry. standard passenger tariff C.R.C. 1.

27703, Sept. 23.—Suspending order 27074, Mar. 18, re C.P.R. spur for E. W. Gillette Co., Toronto.

27704, Sept. 16.—Ordering Canadian Northern Ontario Ry. to install interlocking plant at junction with C.P.R. near Harrowsmith station, Ont., by Oct. 1, 1919; pending installation all trains to stop before running through crossovers there.

27705, Sept. 24.—Extending to Nov. 1, time within which Kettle Valley Ry. shall enlarge freight shed end of station building at Rock Creek, B.C.

27706, Sept. 24.—Ordering C.P.R. within 60 days to install improved automatic bell at King St. West, Ingersoll, Ont.; 20% of cost to be paid out of railway grade crossing fund.

27707, Sept. 24.—Approving location and details of temporary station and facilities to be maintained by Montreal Tunnel & Terminal Co. (C.N.R.) at LaSaguetiere St., Montreal.

27708, Sept. 25.—Authorizing G.T.R. to build extensions to 2 spurs for Watson & Todd, Ltd., Ottawa, Ont.

27709, Sept. 16.—Ordering G.T.R. forthwith to put station at Low Banks, Ont., in proper repair and appoint caretaker to look after L.C.L. freight and express and keep station heated and lighted for passengers.

27710, Sept. 24.—Authorizing G.T.R. to build siding and spurs therefrom, for Crane, Ltd., Montreal.

27711, Sept. 21.—Approving Quebec Ry., Light & Power Co.'s standard mileage freight tariff C.R.C. 113.

27712, Sept. 25.—Extending to Nov. 15 time within which Canadian Northern Ry. shall erect third class station at Lanfane, Alta., as required by order 27416, July 8.

27713, Sept. 24.—Ordering C.P.R. to install bell at highway crossing north of Crowell's siding, mileage 39.4, Newport Subdivision, Que., 20% of cost to be paid out of railway grade crossing fund.

27714, Sept. 27.—Authorizing G.T.R. and any other railways that have made similar publications to amend tariffs providing free storage for 10 days on and after Oct. 1, providing that should Montreal Harbor Commissioners extend their free storage period beyond 10 days, the railway tariffs shall be simultaneously amended to provide for at least the same free storage period.

27715, Sept. 27.—Dismissing complaint of Bole Grain Co., Fort William, Ont., that C.P.R. refuses to issue bills of lading for grain weighed by government weighing department, except with the provision, "Shippers load and count."

27716, Sept. 27.—Ordering C.P.R. to install automatic bell at crossing of Main St., Morse, Sask.

27717, Sept. 27.—Ordering C.P.R. to extend track at Realdyn, Sask., to serve elevator there; work to be completed Nov. 1.

27718, Sept. 28.—Suspending, on complaint of Dominion Travellers Association, and other commercial travellers associations, Quebec, Montreal & Southern Ry. and Napierville Jct. Ry. tariffs which cancelled reduced fares and special baggage for commercial travellers pending before the Board.

27719, Sept. 27.—Ordering G.T.R. to build 2 stock pens at Goldstone, Ont., and sink well for supplying water for the stock.

27720, Sept. 26.—Authorizing C.P.R. to build diversion of road allowance on north boundary of n. e.  $\frac{1}{4}$  Sec. 33, Tp. 11, Range 2, west 2nd meridian.

27721, Sept. 28.—Authorizing Dominion Atlantic Ry. to open for traffic portion of its North Mountain Branch from Centreville to Weston, 15.03 miles.

27722, Sept. 27.—Authorizing C.P.R. to build across and divert east and west road allowance

between n. e.  $\frac{1}{4}$  Sec. 9, and s. e.  $\frac{1}{4}$  Sec. 16, Tp. 61, Range 24, near Tawatinaw, Alta.

27723, Sept. 27.—Approving location of Canadian Northern Ry. Medicine Hat line through Tps. 27 and 22, Ranges 12 to 11, in Alberta, from mileage 22.22 to 58.94.

27724, Sept. 30.—Approving proposed C.P.R. mixed train service between Coronation and Kerrobert, Alta.

27725 to 27727, Sept. 30.—Ordering C.P.R. to restore until Dec. 31 semi-weekly mixed train services on its Irricana and Sterling-Manyberries Subdivisions, and between Sutherland and Lomond, Alta.

27728, Sept. 30.—Ordering C.P.R. to establish a tri-weekly mixed train service carrying mail and express between Lethbridge and Cardston and between Lethbridge and Coutts, Alta.

27729, Sept. 30.—Authorizing C.P.R. to make crossing in Sec. 22, Tp. 36, Range 10, west 3rd meridian, and necessary road diversion to reach it and to close present crossing in Sec. 26, Sask.

27730, Sept. 30.—Authorizing C.P.R. to build extension to spur for Eagle Lumber Co., St. Jerome Parish, Que.

27731, Sept. 30.—Authorizing Quebec, Montreal & Southern Ry. to build spur for Leclaire Shipbuilding Co., St. Joseph, Que.

27732, 27733, Sept. 30.—Approving Bell Telephone Co.'s agreement with Vespra Tps., Ont., Sept. 16; and Tyendinaga Tps., Ont., Sept. 20.

27734, Oct. 1.—Amending order 27287, June 6, which restricted speed of Grand Trunk Pacific Ry. trains over certain bridges between Wainwright and Irma, Alta.

27735, Oct. 1.—Authorizing C.P.R. to operate over spurs serving Canadian General Electric Co., Peterborough, Ont.

27736, Oct. 1.—Authorizing Mount Royal Tunnel & Terminal Co. to cross Dorchester St., Montreal, carrying highway over its tracks by a viaduct.

27737, Sept. 27.—Authorizing Canadian Northern Western Ry. to open for traffic its line from mileage 32.1 Peace River Extension to mileage 33.8 Alta.

27738, Oct. 2.—Approving clearance of C.P.R. standard commercial coal sheds.

27739, Oct. 2.—Authorizing C.P.R. to build spur for Dryden Timber & Power Co., near Eagle River, Ont.

27740, Oct. 2.—Authorizing Canadian Northern Ontario Ry. to build branch line from its yard to Cartierville Village, Que.

27741, Oct. 1.—Ordering Quebec, Montreal & Southern Ry. to rearrange its train service between Iberville and Noyan Junction, Que.

27742, Oct. 7.—Authorizing C.P.R. to build spur for Gordon, Ironsides and Fares, Packers, Ltd., Moose Jaw, Sask.

27743, Oct. 4.—Authorizing Mount Royal Tunnel & Terminal Co. (C.N.R.) to open for traffic its line from junction with the C.N.O.R. near St. Laurent to terminal at LaSaguetiere St., Montreal.

27744, Oct. 3.—Authorizing Mayfield rural municipality no. 496, Sask., to make two highway crossings over Canadian Northern Ry. in Sec. 31, Tp. 42, Range 14, west 3rd meridian.

27745, Oct. 2.—Authorizing Templeton East, Que., to make highway crossing over C.P.R. near line along lots 2 and 3, Range 2, Templeton Tps., Que.

27746, Oct. 3.—Approving G.T.R. clearances of G.T.R. at certain spurs for Canadian General Electric Co. at Peterborough, Ont.

27747, Oct. 7.—Authorizing Hamilton Radial Electric Ry. to build branch across Wilson St., Hamilton, Ont.

27748, Oct. 7.—Ordering Michigan Central Rd. not to exceed 10 miles an hour over crossing of Bridge St. and Victoria Ave., Niagara Falls, Ont.

27749, Oct. 7.—Approving Canadian Northern Ry. time table effective Oct. 20, providing local train eastbound due at Fallowfield 10.05 a.m. and westbound 5.49 p.m.; train due to leave Ottawa at 12.45 p.m., daily except Sunday to stop at Fallowfield on flag for passengers west of Forgar.

27750, Sept. 30.—Relieving C.P.R. from providing further protection at the crossing of Admiral's Road, near Victoria, B.C.

27751, Sept. 28.—Authorizing C.P.R. pending further order to remove regular agent at Midnapore, Alta., waiting room to be kept clean and heated and lighted for passengers.

27752, Oct. 8.—Extending to Nov. 20 time within which Canadian Northern Ry. shall enlarge station room at Lamont, Alta.

27753, Sept. 28.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to build stone or timber wall 3 ft. high to prevent stones and gravel rolling down the slopes at crossing of Ross Road, Aldergrove, B.C.

27754, Oct. 7.—Authorizing Grand Trunk Pacific Saskatchewan Ry. and C.P.R. to operate over connection in s. e.  $\frac{1}{4}$  Sec. 26, Tp. 36, Range 6, and in s. w.  $\frac{1}{4}$  Sec. 16, Tp. 36, Range 4, west 3rd meridian.

27755, Oct. 9.—Relieving C.P.R. from providing further protection at 8th Avenue East, Moose Jaw, Sask.

27756. Oct. 9.—Dismissing complaints of Martin and Robertson, Ltd., and Imperial Rice Milling Co., Vancouver, B.C., against increased carload rates on rice from Vancouver to Eastern Canada, which went into effect August, 1917.

27757. Oct. 8.—Extending to Nov. 15, time 23, 1915, re removal by C.P.R. of its agent at Jeanette station, Ont.

27758. Oct. 9.—Authorizing Canadian Northern Ry. to build spur to its freight shed at Fort William, Ont., crossing Vickers and Cameron Sts.

27759. Oct. 9.—Authorizing Temiscouata Ry. to remove regular station agent at St. Hilaire, N.B., caretaker to be appointed to see station kept clean, and heated and lighted for passengers.

27760. Oct. 9.—Amending order 23341, Feb. within which A. B. Pottinger, District Registrar, Supreme Court of British Columbia, may make enquiry into and report upon cost of building Hastings St. viaduct over Vancouver, Victoria & Eastern Ry. (G.N.R.), Vancouver, B.C.

27761. Oct. 9.—Authorizing Canadian Northern Ry. to remove regular station agent at Brookings, Sask., caretaker to be appointed to see that station is kept clean and heated and lighted for passengers.

27762. Oct. 7.—Amending order 27629, Sept. 4, re replacement of wooden trestles at C.P.R. bridges 36.4 and 36.97 over the Frenchman River, Govenlock Subdivision, Sask.

27763. Oct. 21.—Ordering Canadian Northern Ry. to build transfer track with C.P.R. near Bain-tree station, Alta.

27764. Oct. 11.—Extending to Nov. 15 time within which the C.P.R. shall build two-pen stock yard at Cairns, Alta., as required by order 27505, July 30.

27765. Oct. 11.—Authorizing C.P.R. to make a diversion in lieu of portion of road allowance between Cons. 6 and 7, Albion Tp., Peel County, Ont., near mileage 28.9, MacTier Subdivision.

27766. Oct. 9.—Authorizing protection by bells as provided by G.T.R. at following crossings: Second Ave., Lachine; French Road, Vaudeville; Military Road, Lancaster; Rock Cut, Collins Bay; Laidley Crossing, Ernestown; Geddes St., Belleville; Grier St., Belleville; Lakeborne Road, Colborne; Corbett's Crossing, Whitby Jet.; and Kingston Road Scarborough Jet.

27767 to 27770. Oct. 9.—Authorizing protection by watchmen by G.T.R. at 42 crossings.

27771. Oct. 12.—Authorizing C.P.R. to build spur for Prairie Rose Brewery Ltd., Moose Jaw, Sask.

27772. Oct. 21.—Ordering G.T.R., C.P.R. and Toronto, Hamilton & Buffalo Ry. to publish tariffs of joint through rates on turnpikes, in carloads, to principal destinations in southern United States as arranged between parties concerned, that shall not exceed lowest combination of rates to and beyond Buffalo, N.Y., or to and beyond basing points commonly called Ohio River Crossings; said tariffs to become effective not later than Nov. 1.

27773. Oct. 22.—Disallowing rates published in commodity tariffs on building material, which have been increased more than 25%, authorized by order in council 1863, July 27, by G.T.R., C.P.R., C.N.R., T.H. & B.R., Q.M. & S.R., Napierville Jet. Ry., D.A.R., Glengarry & Stormont Ry., Chatham, Wallaceburg & Lake Erie Ry., N.Y.C.R., M.C.R., P.M.R. and Wabash Ry.

27774. Oct. 22.—Ordering C.P.R. in connection with spur to be built for Laing Produce & Storage Co., to pay Mrs. Fraser, owner of lot immediately west, \$1,250 as compensation.

27775. Oct. 23.—Authorizing C.P.R. to deepen existing drain from Sydney St., Trenton, Ont., southeasterly.

27776. Oct. 24.—Authorizing Canadian Northern Ry. to open for traffic line from Eston to Glidden, Sask., 20 miles, speed of trains from mileage 101 to 104.5 limited to 18 miles an hour.

27777. Oct. 24.—Suspending Bell Telephone Co. schedules containing proposed increased tolls and charges, effective No. 20, pending hearing to be fixed by the Board.

27778. Oct. 24.—Amending order 27736, Oct. 1, re crossing of Dorchester St., Montreal, by Mount Royal Tunnel & Terminal Co.

27779. Oct. 24.—Approving location of C.P.R. station at Raymond, Alta., crossing of Broadway be narrowed to 66 ft., and street continued in its present line.

27780. Oct. 25.—Authorizing G.T.R. and Grand Trunk Pacific Saskatchewan Ry. to operate over connection at Duro, thence to Engen, Sask., through connection of C.P.R. and G.T.P.R., thence over C.P.R. through Saskatoon, thence through connection between C.P.R. and G.T.P.S.R., and over G.T.P.S.R. and through connection between G.T.P.S.R. and G.T.P.R., about 16 miles.

27781. Oct. 28.—Suspending rate of 2c per 100 lbs. on milling-in-transit, pending further hearing.

L. C. Fritch Vice President, Chicago, Rock Island & Pacific Ry., and Minneapolis & St. Paul Rd., Chicago, in writing to have his address changed, says:—"Please change my address so that I may get your valuable paper regularly. I enjoy it very much."

## Canadian Northern Railway Construction, Betterments, Etc.

**Mount Royal Tunnel.**—The President and directors made a trip of inspection over the line from Toronto, reaching Montreal Sept. 29. The regular operation of trains in and out of the temporary terminal on Lagachetiere St., Montreal, through the tunnel, was started Oct. 21.

**Eastern Lines.**—Tenders have been asked for the erection of concrete abutments for bridges at mileage 129, Trenton subdivision, near Malvern, Ont., and mileage 0, on the Brockville subdivision at Brockville, Ont.

Tenders have also been asked for grading team tracks at the Cherry St. yards, Toronto.

The President and directors inspected the works in progress at the Leaside terminals, Toronto, Sept. 28. It was reported that progress on these works has not been as rapid as was anticipated, owing to the scarcity of labor and the difficulty of getting materials.

**Central District.**—A press report states that the relaying of the line west of Port Arthur with heavier steel rails has been completed as far as Mokomon, 32 miles, and that work has been suspended for the season.

A press report states that plans for the consolidation of the C.N. Ry. and Great Northern Ry. passenger stations and freight sheds at Warroad, Minn., are under consideration.

The Premier of Saskatchewan is reported to have said at Moose Jaw recently that the agreement providing for a joint station for the C.N.R. and the Grand Trunk Pacific Ry. in that city had been signed. It is said that the new station will be built on the C.N.R. property on

the Crescent, to which point the company has already built its line. The present G.T.P.R. station is outside the city limits. In addition to building a new station, the agreement provides for the use by the C.N.R. of the G.T.P.R. line between Moose Jaw and Regina. The building will be erected, the Premier said, in the near future, the Saskatchewan Legislature having made provision for guaranteeing bonds to provide the funds. A press report of Oct. 13 says that the proposed union station is to be on Stadacona St., between Third and Fourth Avenues, facing west, and that the freight sheds will be built north of Caribou St., in the vicinity.

**Vancouver Island Lines.**—M. H. MacLeod, General Manager and Chief Engineer, is reported to have informed the Premier of British Columbia, Oct. 10, that there were then 15 cars of steel rails at Patricia Bay, and that tracklaying out of Victoria towards Nitinat would be commenced Oct. 14 or 15; also that arrangements had been completed for the transfer of a continuous supply of the rails released by the B.C. Government from the Pacific Great Eastern Ry. dump at Squamish, and that 10 additional cars of rails which had just been released from Chicago for the P.G.R. would be diverted to the C.N. Ry. (Oct., pg. 440.)

Werner Horn, who was sentenced to 18 months imprisonment by a United States court for carrying dynamite, contrary to law, was brought before the U.S. Commissioner at Atlanta, Ga., Oct. 9, upon requisition proceedings from New Brunswick to answer a charge of blowing up the C.P.R. bridge on the New Brunswick-Maine boundary in 1895. Horn protested against the proceedings and asked to be interned in the U.S.

# The Changes in the Canadian Pacific Railway Management.

Following a meeting of C.P.R. directors in Montreal, Oct. 10, the following statement was given to the press:—"At a meeting of the directors held in Montreal today, Lord Shaughnessy, after 20 years of office, retired from the presidency of the C.P.R. Co., so that, while relieved of executive duties, he will continue to serve with his counsel and ex-

Rt. Hon. Lord Shaughnessy, K.C.V.O.  
Chairman, Canadian Pacific Railway Company.

perience. This change is due to Lord Shaughnessy's conviction that in view of the extensive programme planned by the C.P.R. for the period of the war, the best interests of the company would be served if a younger man were to assume the active direction of so large and complex a system. Although several years older than either of his predecessors were at the time when they retired from the presidency, he decided when the war broke out to carry on till the financial horizon should lighten. Now, however, he feels less hesitation in handing over the executive responsibility to a successor, especially to one who has shown notable administrative ability, and who enjoys to a marked degree the confidence not only of the political and business leaders of Canada, but also of the employees of the Canadian Pacific Railway itself. E. W. Beatty, the new president, has been Vice President and General Counsel, and also a director of the C.P.R. Co. for several years.

"Sir George Bury, on account of ill health, is retiring from the position of Vice President, and Grant Hall, who has been Vice President in charge of Western Lines, has been appointed in his place."

In a newspaper interview on the same day Lord Shaughnessy is reported to have said:—"Sir George Bury entered the company's service in the early part of 1883, as a junior stenographer in my office when I was General Purchasing Agent, and during the following 35 years he steadily advanced, receiving promo-

tion after promotion in recognition of the fidelity and ability with which his duties were performed wherever he was located and whatever his position, until he finally became Vice President and a member of the executive committee. Unfortunately, his state of health has not been satisfactory for a couple of years past, and with a view to rest and recuperation he asked to be relieved from the duties of the Vice Presidency, and the request was granted by the directors. Although he has retired from the official position he will not be entirely disassociated from the company's affairs."

Lord Shaughnessy retains the suite of offices on the second, or executive, floor of the general office building at Windsor St. Station, Montreal, which he has occupied since the extension down to St. Antoine St. was built. E. W. Beatty remains in room 203, which has been his office as Vice President and General Counsel.

Grant Hall arrived in Montreal from Winnipeg on Oct. 10 and went to work immediately in the office occupied formerly by Sir George Bury. He is reported as saying in a newspaper interview:—"The recent change in my position means, of course, that in future I shall reside in Montreal, but it is my intention to keep in close touch with western conditions and to make my inspection trips over that portion of the system as frequent as possible. The selection of D. C. Coleman as resident Vice President will no doubt commend itself to the public, as he has

A few days after the changes were announced, Sir George Bury left for Washington, D.C., and other southern points, accompanied by Lady Bury.

Full particulars of other promotions in the company's service are given under "Transportation Appointments Throughout Canada" and biographical information about all the appointees is given under "Mainly About Railway People Throughout Canada" on other pages of this issue.

These are days of intensely interesting events in regard to the management of Canadian railways. In September, the reorganization of the Canadian Northern directors was accomplished, and D. B. Hanna was promoted to the presidency. Early in October, Lord Shaughnessy retired from the presidency of the C.P.R., after 35 years continuous service with the company.

When Thomas G. Shaughnessy, as he then was, took over the C.P.R. presidency in 1899, from the great and gifted miles and its annual gross revenue has grown to \$152,389,334.95.

Van Horne, but for whose remarkable ability and indomitable courage the company could not have built its transcontinental line, the company was operating 9,618.6 miles of track and its gross annual revenue was \$26,138,977.13. During the twenty years of Lord Shaughnessy's able administration, the company's railway lines have been extended to 18,625.7

Edward W. Beatty, K.C.  
President, Canadian Pacific Railway Company, in his office.

spent his entire railway career in Western Canada and is thoroughly conversant with traffic conditions and public sentiment in that territory. It can be accepted as an intimation that the railway will be efficiently and capably managed and that the policy of the company there will continue on broad and generous lines."

That Lord Shaughnessy performed his duties as President in a most able way, and with due regard not only to the company's interests, but to those of the people as well, is undoubted, and in retiring from active work he has the satisfaction of handing over to his successor, in a magnificent financial position, the

greatest transportation system in the world, whose own combined steamship and railway lines extend from England to China. Lord Shaughnessy has not confined his activities to his railway work, but has taken an active part, as a financial and other institutions. He has played a magnificent part in regard to the war and has been of the greatest assistance to both the British and Canadian governments in this respect, and he has proved himself in every way one of the very foremost and most useful citizens of his adopted country, the people generally of which will wish him many years of comparative relaxation from the arduous work he has carried on for so many years.

E. W. Beatty's appointment to the presidency did not come in the nature of a surprise, except possibly as to its date. For a considerable time he has been looked on as Lord Shaughnessy's logical successor. Some newspapers have referred to his career as a meteoric one. It is nothing of the kind. He has risen, rapidly, it is true, and at a comparatively early age, to the greatest position Canada offers, but this rise is not owing to luck, or anything of a meteoric nature, but simply to sheer force of ability and the possession of most undoubted qualifications.

The C.P.R. has passed through three stages in its career, the first, its inception and early financing, etc., under George Stephen; the second, the construction of its transcontinental line and a number of branches, the establishment of ocean steamship lines, the creation of world wide traffic connections, and the policy of retaining all earning powers in its own hands, under Van Horne; the third, the building of extensions and more feeding lines, the extension of its traffic connections, the development of its lands and the placing of its finances in an unassailable position, under Shaughnessy. Now it enters on its fourth stage, in which its relations to the public and the question of its future as an independent privately owned line, or as a part of a great government system, will be very much to the fore. For dealing with these questions, as well as with the general administration of the immense property, Mr. Beatty is most thoroughly equipped.

Grant Hall's continued promotions, since he first entered C.P.R. service, have been amply justified. He leaves the direct control of the western lines with a splendid record of successful administration and is amply equipped for the larger responsibilities which have been given him.

The changes in executive positions have resulted in several others, which are detailed on other pages of this issue, and have opened the door of opportunity for a number of other officials who have well earned their promotions.

Sir George Bury's retirement from railway service at the early age of 52 is much to be regretted. He is unquestionably a very able operating man, and, unless his state of health prevents, he should have many useful years before him.

The Eastern Canadian Passenger Association met in Montreal, Oct. 8, under the presidency of A. J. Parr, General Freight and Passenger Agent, Timiskaming & Northern Ontario Ry. A. Miller, who had been General Agent, New York Central Rd., at Montreal, and who has been appointed General Agent at Albany, N.Y., resigned the chairmanship of the Association.

## Railway Finance, Meetings, Etc.

**Grand Trunk Ry.**—A London, Eng., cable stated, Oct. 6, that it was announced there that the G.T.R. directors were unable to pay dividends on the guaranteed or preference stock out of the net earnings for the half year ended June 30.

**Grand Trunk Pacific Ry.**—The directors for the current year elected at the recent annual meeting, are:—A. W. Smithers,

Grant Hall,  
Vice President, Canadian Pacific Railway.

Sir George Bury  
Who has retired from the Vice Presidency of the  
Canadian Pacific Railway.

Chairman; H. G. Kelley, President; W. H. Biggar, Vice President and General Counsel; Frank Scott, Vice President and Treasurer; J. E. Dalrymple, Vice President (Traffic); W. H. Ardley, Comptroller; Sir H. M. Jackson, Sir W. L. Young, J. A. Clutton-Brock, Hon. R. Dandurand, Jules Hone, E. J. Chamberlin, J. B. Fraser and P. McAr. W. P. Hinton is Vice President and General Manager.

**Moncton & Buctouche Ry.**—A meeting

of shareholders for transacting all business necessary to consummate the sale of all the real and personal property belonging to the railway, was called to be held in Moncton, N.B., Oct. 8, but was adjourned until Oct. 15.

The M. & B. Ry. is one of the branch lines for acquiring which provision was made by the Dominion Parliament at its last session. The amount voted by parliament for the purchase of this line was \$70,000. The company's history was given in Canadian Railway and Marine World for July, on pg. 280.

**Temiscouata Ry.**—Gross earnings for July, \$36,014; operating expenses, \$25,622; net earnings, \$10,392.

**Thousand Islands Ry.**—The annual meeting was held at Gananoque, Ont., Oct. 4. The officers for the current year are: E. W. Rathbun, President; H. W. Cooper, Manager; J. H. Valteau, Secretary and Treasurer.

**Timiskaming & Northern Ontario Ry.**—Passenger receipts for August, \$64,298.36; freight receipts, \$171,875.53; total receipts, \$235,173.89, against \$61,955.09, passenger receipts; \$117,419.45, freight receipts; \$179,374.54, total receipts for Aug., 1917.

## Freight and Passenger Traffic Notes.

The last boat of the season from Faircross for Atlin, B.C., left the former point Oct. 28, carrying passengers who had left Vancouver Oct. 19.

The Edmonton, Dunvegan & British Columbia Ry. will, it is reported, inaugurate a through train service from Edmonton to Grand Prairie, Alta., Nov. 1.

The St. John's, Nfld., Board of Trade has taken up with the Reid Newfoundland Co. and the Newfoundland Government, the question of the increased rates on the company's railway, which came into force Oct. 5.

The Canadian Northern Ry. has discontinued operating a local train between Winnipeg and Emerson, Man., leaving this traffic to the Great Northern Ry., which operates over the branch under an agreement.

The Grand Trunk Pacific Ry., in order to meet the wishes of the Canadian Railway War Board regarding the conservation of fuel, has discontinued for the winter operating parlor-observation cars between Winnipeg and Edmonton.

The Grand Trunk Pacific Ry. has begun operating its trains, both east and west bound, into the C.P.R. station at Saskatoon, thus eliminating the transfer from South Saskatoon into the city. The C.P.R. station thus becomes a union station for both railways, and South Saskatoon is discontinued as a ticketing station.

The Victoria, B.C., Board of Trade, on Oct. 3, discussed the stoppage of the running of the C.P.R. steamship to the mainland on Sunday nights, and a suggestion was made that if it was absolutely necessary to suspend the service one night in the week, Saturday night would be a more convenient night than Sunday for cutting the service.

The C.P.R. has completed arrangements for the sale of through tickets from points on its line to points on the Edmonton, Dunvegan & British Columbia Ry. Baggage may be checked through to provide for their own transfer between the stations of the two companies in Edmonton. These stations are about a mile apart, and there is street car connection between them.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Alberta & Great Waterways Ry.**—J. D. McArthur, President, is reported to have said in an interview at Edmonton, Oct. 4, that rails would be laid into McMurray this autumn, and that traffic would be carried to that point as it offered during the winter. Traffic to warrant a frequent service could not be expected at first. (July, pg. 285.)

**The Beaver Cove Lumber & Pulp Co.** has deposited plans with the Minister of Public Works, Ottawa, for railway trestles, log dump, wharf, buildings, etc., to be built on Beaver Cove, Broughton Strait, in front of section 2, Rupert District, B.C. E. A. Cleveland, Vancouver, is engineer in charge.

**Canadian Pacific Ry.**—The Mayor of Victoria, B.C., is reported to have informed the city council recently that in the discussion of the Johnston St. bridge matter with the C.P.R. directors, Lord Shaughnessy summed it up by stating that the discussion narrowed down to three propositions, namely: (1) That the railway would proceed to carry out the terms of the order in council of 1887, providing accommodation for railway, foot and vehicular traffic. (2) The railway would join with all other interested parties in the construction of a modern up to date joint highway and highway bridge. (3) The construction, alongside of one another, of two separate bridges, one, a highway bridge, constructed by the government, the city, and other interested parties, excepting the Esquimalt & Nanaimo Ry.; the other bridge to be constructed by the Esquimalt & Nanaimo Ry., for the use of the railway, of a design in harmony with the highway bridge. A decision as to what will be done is expected to be reached shortly. The mayor had a conference with H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., and P. B. Motley, Engineer of Bridges, in regard to the matter, Oct. 12. Mr. Motley left the same day for Montreal to report on the question. (Sept., pg. 438.)

**Central Canada Ry.**—J. D. McArthur, President, is reported to have said in Edmonton, Oct. 4, on returning from a trip of inspection over the line made in company with the Premier and other members of the Alberta Government, that the line is ballasted throughout to the crossing of the Peace River. Rapid progress was made this year with the erection of the bridge across the river. The contract calls for the completion of the bridge by April, 1919, but it was expected to be finished by Nov. 1. The bridge will not be available for general traffic until the 50 ft. dump at the east end is completed next summer, the material for the widening having to be obtained from an excavation at the west end of the bridge. Grading has been in progress on a 14 mile stretch on the west side of the river, and with the exception of 5 miles of heavy work partially done, this is finished. This carries the line to the upland level on a gradient of 1.5%. There will be difficulty in getting rails for this line and for the further extension into the water hole district. (Sept., pg. 390.)

**Dominion Atlantic Ry.**—The Board of Railway Commissioners has authorized the opening for traffic of the company's North Mountain Branch, 15.03 miles. This branch starts at Centerville, on the Cornwallis Branch, 7 miles from Kentville, and extends to Weston, on the Bay of Fundy.

Construction was started in 1914, the track being laid the same year. Following are the stations on the line, with their mileages from Centerville:—Billtown, 2.9 miles; Lakeview, 5.3 miles; Woodville, 7.2 miles; Grafton, 9.5 miles; Somerset, 12.3 miles, and Weston, 15.3 miles. (Sept., pg. 390.)

**Edmonton, Dunvegan & British Columbia Ry.**—The Premier and other members of the Alberta Government and J. D. McArthur, President, E.D. & B.C. Ry., were guests at a dinner given by the Grande Prairie Board of Trade, Oct. 1. The occasion was a general inspection of this and the other railway lines in which the government is interested, and which are being built by J. D. McArthur. On returning to Edmonton, Oct. 4, J. D. McArthur is reported to have said that ballasting on the line had been completed to within 12 miles of Spirit River, and that work would be started at once in putting the Grande Prairie Branch into good shape for traffic. A through train service to Grande Prairie will be inaugurated Nov. 1. The completion of the extension of the main line from Spirit River to the Pouce Coupe extension could not be decided upon definitely owing to the difficulty of obtaining rails. (July, pg. 285.)

**Grand Trunk Pacific Ry.**—In an interview at Vancouver, B.C., Oct. 10, H. Carlton, of Carlton & Co., contractors, said his firm had been engaged during the summer on ballasting and other work on the G.T.P. Ry. in British Columbia. The headquarters of the work were at Prince George, and there had been employed 8 steam shovels and a hydraulic plant. Slides of embankments had been removed and cuttings had been improved, while ballasting and other betterment work had been done. (Sept., pg. 90.)

**The Michigan Central Rd.'s** freight sheds at Ridgetown, Ont., were destroyed by fire caused through sparks from a passing train Oct. 10. The loss is estimated at \$10,000. The building was of frame and over 100 ft. long. (Oct., pg. 438.)

**North Shore Ry.**—The Moncton, N.B., Board of Trade has asked the Dominion Government to take over and operate as a branch of the Intercolonial Ry., this line, which runs from Adamsville Jet., on the Intercolonial Ry., to Beersville, N.B., 14 miles. (Oct., pg. 438.)

**Pacific Great Eastern Ry.**—A press report states that 8 miles of track have been laid on the extension of the line beyond Clinton, B.C., since work was resumed. Other work done includes the distribution of 25,000 ties, the stringing of 19 miles of telephone line, the completion of bridge 132, a 340 ft. structure, and the making of considerable progress with bridge 133. A contract is reported to have been let locally for the erection of a station and freight shed at the Seventy-Mile crossing of the Cariboo Road. (Oct., pg. 438.)

**Quebec & Saguenay Ry.**—A press report states that it is expected to have the grading, etc., from Baie St. Paul to Murray Bay, Que., ready for tracklaying before the end of the year. There is reported to be one obstacle in the way of completing the line, viz., the building of a bridge over the River du Graffe at Baie St. Paul. The plans call for the erection of a fixed span bridge resting on piers built in the bed of the river. Local people

claim that the river is a navigable one and that the bridge should be built so as not to impede navigation. This matter is reported to have been taken to a Quebec court for decision. (Oct., pg. 438.)

**Roberval-Saguenay Ry.**—We are officially advised that the company has decided to postpone for the present the proposed construction of a spur line from near Pont Arnaud, on the main line, to a loading point at Riviere-du-Moulin, Que., 1.5 miles. (June, pg. 241.)

**St. John & Quebec Ry.**—C. O. Foss, Chief Engineer, is reported to have said at a dinner given by the St. John, N.B., Board of Trade, Oct. 7, that it was hoped to have the extension from Gagetown to a connection with the C.P.R. ready for operation this year, but labor was so scarce that no definite date could be set for the opening of the extension. The main work of construction had been completed, all that remained to be done was the placing in position of three or four bridge spans and the ballasting of the tracks. (Oct., pg. 438.)

**Sydney & Louisburg Ry.**—A press report states that a contract has been let to Chappell Bros. for the erection of a locomotive house at Sydney, N.S., the building to be of concrete and brick, with a modern truss roof, and that it is expected to be completed within three months, and that the estimated cost of the work is \$75,000.

## Canadian Railway War Board's Work.

**Changes in Committees.**—D. B. Hanna, President, Canadian Northern Ry., has succeeded Sir Wm. Mackenzie on the executive committee on war and national defence. Grant Hall, Vice President, C.P.R., has succeeded Sir George Bury as a member of the administrative committee, and has been appointed its acting chairman during the absence through illness of the chairman, U. E. Gillen, Vice President, G.T.R. M. H. MacLeod, Vice President, operation, etc., Canadian Northern Ry., will succeed D. B. Hanna as a member of the Administrative Committee. W. P. Hinton, Vice President and General Manager, Grand Trunk Pacific Ry., is reported to have been appointed to succeed Grant Hall as chairman of the Western administrative sub-committee.

**Freight House Hours of Labor.**—Owing to the insistent demand of labor for an 8-hour day, which has been recognized, and which railways have undertaken to apply in Canada, it is considered necessary to work freight house staffs on the 8-hour day basis. It is, therefore, directed that, effective Oct. 15, 1918, railway freight houses shall be opened for the receipt and delivery of freight on week days at 7.30 a.m. daily, and closed at 5 p.m. daily, except Saturday, on which day houses shall be closed at 1 p.m.

G. Black, formerly local manager, Great North Western Telegraph Co., Hamilton, Ont., died there Oct. 2, aged 81. He was born at Montreal, and was in telegraph service at St. Hyacinthe, Que., and Brockville, Ont., before being appointed to Hamilton, where he remained as local manager for about 40 years, retiring about 10 years ago.

W. E. Norman, heretofore Assistant Superintendent, has been appointed Superintendent, Canadian Express Co., vice E. Allen, deceased.

## Mainly About Railway People Throughout Canada.

**W. B. Howard**, District Passenger Agent, C.P.R., Toronto, was married there, Oct. 8.

**Sir Henry Drayton, K.C.**, Chief Railway Commissioner, resumed his duties, Oct. 18, after an attack of influenza.

**James Barbour**, Claims and Right of Way Agent, Canadian Northern Ry., Toronto, died there, Oct. 17, aged 50.

**Frank Scott**, Vice President and Treasurer, G.T.R., Montreal, has also been elected a director of the Central Vermont Ry. Co.

**Hon. J. D. Reid**, Minister of Railways and Canals, returned to Ottawa at the end of October after a trip to California with Mrs. Reid.

**Sir Henry Drayton, K.C.**, Chief Railway Commissioner, was confined to his home at Ottawa, early in October, with influenza, and resumed his duties Oct. 16.

**A. S. McDonald**, Locomotive Foreman, C.P.R., Regina, Sask., was presented with a case of silver by the local locomotive staff, Sept. 30, on his retirement on superannuation, after 35 years service.

**Capt. T. A. Hiam**, formerly private secretary to Sir Donald Mann, who went overseas with the Canadian Buffs from Toronto, and transferred to the Royal Engineers, has been sent to Salonika in the railway operations branch.

**E. P. Cushing**, formerly private secretary to the President, C.P.R., was presented with a smoker's set by a number of his associates at Montreal, recently, on his appointment as Purchasing Agent, C.P.R., Winnipeg.

**W. B. Lanigan**, Freight Traffic Manager, C.P.R., was entertained to luncheon by the Winnipeg Board of Trade, Oct. 8, and presented with a grandfather's clock, on leaving Winnipeg, where he had been Assistant Freight Traffic Manager, for Montreal, to take up his new duties.

**W. F. Langton**, whose appointment as General Manager, Dominion Transport Co., Montreal, was announced in our last issue, was presented with a desk and an illuminated address by the staff at Toronto, before leaving there, where he had been Superintendent for a number of years.

**George Cairns**, at one time Yardmaster, C.P.R., Ottawa, Ont., and for some time subsequently, up to his superannuation about three years ago, baggage man on C.P.R. trains through the Gatineau Valley, died at Westboro, near Ottawa, Oct. 22. He had been in railway service for nearly 50 years.

**J. F. Aitchison**, who has been appointed acting Auditor of Disbursements, G.T.R. and Grand Trunk Pacific Ry., Montreal, entered G.T.R. service in 1897, since when he has been, to 1914, in accounting department, London, Ont.; 1914 to 1917, travelling accountant, Montreal; 1917 to Oct., 1918, special auditor, Montreal.

**W. W. Butler**, Vice President and Managing Director, Canadian Car and Foundry Co., Montreal, has won the shield trophy donated by the Canadian Northern Ry. annually to any non-resident angler catching the largest speckled trout with the regulation tackle prescribed for Nipigon waters. The fish was 23 in. long and 15 in. in girth.

**Victor Albert George Day**, who has been appointed Resident Engineer, Toronto Terminals, C.P.R., was born at Aberdeen, Scotland, Feb. 4, 1883, and entered

C.P.R. service in Sept., 1903, since when he has been, to June, 1907, draftsman, Montreal; June, 1907, to June, 1911, office engineer, Montreal; June, 1911, to Aug., 1918, Assistant Engineer, Construction Department, Montreal.

**A. D. MacTier**,  
Vice President, Eastern Lines, Canadian Pacific  
Railway.

**D'Alton C. Coleman**,  
Vice President, Western Lines, Canadian Pacific  
Railway.

**J. M. Rosevear**, who has been appointed General Auditor, G.T.R. and Grand Trunk Pacific Ry., Montreal, was born at St. Lambert, Que., Aug. 9, 1869, and entered G.T.R. service in 1897, since when he has

been, to 1905, clerk in Accounting Department; 1905 to 1907, travelling accountant; 1907 to Sept. 1, 1908, chief clerk to Auditor of Disbursements; Sept. 1, 1908, to Oct., 1918, Auditor of Disbursements.

**Basil Magor**, formerly Vice President and Managing Director, National Steel Car Co., who left Hamilton, Ont., some months ago and returned to the United States, has been appointed by the Vice President and General Manager of the United States Shipping Board Emergency Fleet Corporation, as District Manager for the North Atlantic District. Additional particulars are given in the Marine Department, farther on in this issue.

**C. F. Burns**, Auditor of Disbursements, Canadian Government Railways, Moncton, N.B., died suddenly through heart failure, at his home, Oct. 16. He was born at Clementsport, N.S., Sept. 10, 1853, and held the position of Auditor of Disbursements since July, 1906, when that department was inaugurated. Prior to that appointment he was connected with the Audit Department as travelling auditor and chief clerk, and was in C.G.R. service for about 20 years.

**Charles Spencer**, who died at Ottawa, Oct. 15, aged 85, was, at the time of his superannuation a few years ago, one of the oldest employees of the C.P.R., having been in the service of the company and its predecessor for about 45 years. He was for many years a conductor on various C.P.R. lines. H. B. Spencer, Superintendent, Ottawa Division, Ontario District, is a son, and the late C. W. Spencer, at one time in the C.P.R. service and afterwards with the Canadian Northern Ry., was another son.

**T. T. Irving**, whose appointment as Chief Engineer, G.T. Western Lines Rd., Detroit, Mich., was announced in our last issue, was educated at the Prince of Wales College and McGill University, and graduated in 1898. He entered G.T.R. service in May, 1898, and was to 1904, Assistant Engineer, Eastern Division, Montreal; 1904 to 1912, Resident Engineer on the Western Lines; 1912 to 1913, Trainmaster, and 1913 to Aug., 1918, Division Engineer, Western Lines, Chicago, Ill.

**G. U. Ryley**, Land Commissioner, Grand Trunk Pacific Ry., Winnipeg, has retired from the service. He was born at Hamilton, Ont., June 16, 1853, and is a Dominion Land Surveyor. He was engaged in Manitoba and the North West Territories on surveys for the Dominion Government in 1881 and 1882, and in 1883 he entered the Department of the Interior's lumber and mines branch at Ottawa, Ont., becoming chief clerk, July 1, 1898. He was appointed Land Commissioner, Grand Trunk Pacific Ry., at Winnipeg, in Nov., 1906.

**E. B. Skeels**, formerly Resident Engineer, C.P.R., Lethbridge, Alta., now Superintendent, Bates & Rogers Construction Co., civil engineers and contractors, has been transferred from Cincinnati to Toledo, Ohio, where he has been given charge of the construction of the water and sewer systems for the \$15,000,000 air nitrates plant being built for the Air Nitrates Corporation by the Bates & Rogers Construction Co. He retains charge of the work near Cincinnati on which he was engaged previously until its completion.

**M. W. Bard**, who has been acting as acting Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, Que.,

was born at Walnut, Bureau County, Ill., June 27, 1871, and entered railway service, Jan. 8, 1890, since when he has been, to Aug. 2, 1901, freight brakeman, Chicago, Burlington & Quincy Rd.; Aug. 2, 1901, to Aug. 1, 1913, freight conductor, same road; Aug. 1, 1913, to 1914, passenger conductor, same road; 1914 to Jan. 24, 1916, Trainmaster, Construction Department, same road; Jan. 24, 1916, to Oct., 1918, Assistant Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, Que.

**Karl Fritjof Nystrom**, who has been appointed chief draftsman, Chief Mechanical Engineer's office, C.P.R., Montreal, was born in Sweden, Sept. 2, 1881, and came to North America in 1905, since when he has been, to 1908, draftsman, Pressed Steel Car Co., Pittsburg, Pa.; 1908 to 1909, draftsman, Pullman Co., Chicago, Ill.; 1909 to 1911, designing engineer, Southern Pacific Co., San Francisco, Cal.; 1911 to 1912, Assistant Mechanical Engineer, American Car & Foundry Co., St. Charles, Mo.; 1912 to 1913, Mechanical Engineer, Acme Supply Co., Chicago, Ill.; 1913 to 1918, chief draftsman, Car Department, G.T.R., Montreal.

**A. D. Co., with office at La Salle St. Station, Chicago, was born at Springfield, Ill., Aug. 11, 1869. He took a course in civil engineering at the University of Cincinnati, and subsequently a law course, and was admitted to the Ohio bar in 1899. He entered railway service in 1884 as supervisor's assistant, Ohio & Mississippi Ry., and was from Jan. 1, 1886, to Oct., 1892, Assistant Engineer, same road; Oct., 1892, to Nov. 1, 1893, Engineer, Maintenance of Way, same road; and was also Construction Engineer in charge of construction, Cincinnati & Bedford Ry.; Nov. 1, 1893, to Sept. 1, 1899, Division Engineer, Baltimore & Ohio Southwestern Rd., which absorbed the Ohio & Mississippi Ry.; Sept. 1, 1899, to Nov., 1902, Superintendent, Mississippi Division, same road; Feb., 1904, to Mar. 1, 1905, engaged on special work, Illinois Central Rd., Chicago, Ill.; Mar. 1, 1905, to Nov., 1906, Assistant to General Manager, same road; Nov., 1906, to Mar. 1, 1909, Assistant to President, same road; Mar. 1 to Nov. 15, 1909, Consulting Engineer, same road; Nov. 15, 1909, to Mar. 31, 1914, Chief Engineer, Chicago Great Western Rd., Chicago, Ill.; Mar. 31, 1914, to Aug., 1915, Assistant to President, Canadian Northern Ry., Toronto, and from Aug., 1915, to June 1, 1917, General Manager, Eastern Lines, same road, Toronto; June 1, 1917, to Oct., 1918, General Manager, Seaboard Air Line Ry., Norfolk, Va.

**G. W. Vaux**, formerly General Passenger Agent, G.T.R., Montreal, and for several years General Agent, Union Pacific Rd., Chicago, has ceased to hold the latter position, the office having been discontinued. He has been appointed General Manager, Zeigler Co., Zeigler, Ill.

### Grain Inspected at Western Points.

The following figures compiled by the Trade and Commerce Department's Bureau of Statistics, show the number of cars of grain inspected on railways at Winnipeg and other points in the Western Division, for Sept., 1918 and 1917:

	Sept. 1918 bush.	Sept. 1917 bush.
C.P.R. ....	5,260	9,794
C.N.R. ....	4,122	6,619
G.T.P.R. ....	811	1,897
G.N.R. (Duluth).....	196	196
Totals .....	10,389	18,506

**Curtail Railway Travelling.**—A Winnipeg press dispatch of Oct. 23 credits E. W. Beatty, President, C.P.R., with stating there that he wished to urge upon the public the advisability of curtailing all unnecessary railway travelling during the prevalence of the influenza epidemic. The eastern section of the C.P.R. has already been very seriously handicapped, many of the employees being down with the disease, he said, and concluded: "It may be necessary to reduce the number of passenger trains. This will mean very much closer packing of passengers in cars. No person, not absolutely obliged to travel, should increase the burden already being borne by the railway service."

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.  
Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS.

Managing Director and Editor-in-Chief.

AUBREY ACTON BURROWS - Secretary and  
Business Manager.

## Canada's Paramount Duty.

Canada is calling on her people to over-  
subscribe the Victory Loan of 1918 as an  
imperative duty that cannot and must not  
be shirked. The reasons are plain to  
everyone.

Great Britain, having borne tremendous  
burdens, cannot be expected to finance her  
war purchases in this country. The  
United States is perfecting a vast war  
machine. Her financial resources are re-  
quired for that purpose. It is necessary,  
therefore, that Canada should raise with-  
in her borders the funds required, not  
only to carry on our normal and war  
activities, but also to advance substantial  
sums to Great Britain for her purchases  
here.

While in the United States the people  
have been asked to subscribe a Liberty  
Loan every few months, we, in Canada,  
have not been asked to subscribe a war  
loan since Nov., 1917. This is an enor-  
mous advantage in every way. The long  
respite from war loan activities has en-  
abled the 1917 Victory Loan to be splen-  
didly absorbed and distributed, and has  
allowed business to proceed without the  
temporary halt which war loan issues  
usually bring.

The maintenance of the market price  
of the 1917 Victory Loan at the issue  
price, and even higher, shows the gilt  
edged nature of the security and furn-  
ishes a record in war finance. The pur-  
chase of war loan bonds is a duty; a duty  
that ensures profit.

Canadian Railway and Marine World  
has no hesitation in urging its readers  
to put every dollar they can into the  
Victory Loan now offered. Its proprietors  
have subscribed, to the utmost of their  
ability, to all the Canadian war loans  
which have been issued, including the  
present one. Altogether outside of the  
patriotic duty that devolves on every citi-  
zen, they believe that there is no other  
security available which offers so abso-  
lutely safe an investment and at such a  
satisfactory rate of interest.

## Canadian Northern Ry's Montreal- Toronto Passenger Service.

The C.N.R.'s temporary passenger  
station on Lagache Street, Montreal,  
which was described and illustrated in  
Canadian Railway and Marine World for  
October, and also the Mount Royal Tun-  
nel having been completed, through pas-  
senger service between Montreal and To-  
ronto via Ottawa was started Oct. 20,  
when the first train eastbound left Toron-  
to at 11 p.m., having on board R. C.  
Vaughan, Assistant to the President, and  
a number of other officials. The first  
through train westbound left Montreal  
Oct. 21, at 8:15 a.m.

The service consists of two trains a day  
each way, as follows:—

Westbound.		
Leave Montreal	8:15 a.m.	6:15 a.m.
Arrive Ottawa	12:15 p.m.	10:15 p.m.
Leave Ottawa	12:45 p.m.	10:45 p.m.
Arrive Toronto	9:45 p.m.	7:30 p.m.
Eastbound.		
Leave Toronto	10:00 a.m.	11:00 p.m.
Arrive Ottawa	6:30 p.m.	7:30 p.m.
Leave Ottawa	7:00 p.m.	8:00 a.m.
Arrive Montreal	11:00 p.m.	12 noon.

The trains leaving Montreal and To-  
ronto in the evening run daily. Those  
leaving both places in the morning do  
not run on Sundays. The evening train  
from Montreal for Toronto carries a  
standard sleeping car, and a cafe parlor  
club car, for Toronto, and at Ottawa  
takes on another standard sleeping car  
and a compartment sleeping car. The

night train from Toronto carries standard  
sleeping and compartment sleeping cars  
for Ottawa, and a cafe parlor club car  
and a standard sleeping car for Montreal.  
The trains leaving Montreal and Toronto  
in the morning carry through parlor and  
dining cars.

The distance by the new route is:  
Montreal to Ottawa, 113.75 miles; Otta-  
wa to Toronto, 257.4 miles. Total, 371.15  
miles. The other companies' distances  
are: G.T.R., 333.04 miles; C.P.R., via  
Peterborough, 338.5 miles; C.P.R., via  
Lake Ontario Shore Line, 340.5 miles.

Between Montreal station and Cartier-  
ville, 7.3 miles, including the tunnel sec-  
tion, the trains are hauled by electric  
locomotives.

## Unconfirmed Press Reports.

That Hon. J. D. Reid, Minister of Rail-  
ways, is to retire from the Dominion  
Government, on account of ill health, and  
that he will be appointed a senator.

That Hon. Clive Pringle will resign  
from the Senate, and be appointed Gen-  
eral Counsel, Canadian Government Rail-  
ways.

That A. W. Campbell, ex-Deputy Min-  
ister of Railways and Canals, Ottawa,  
now on a year's leave of absence, will be  
appointed Commissioner for Good Roads,  
for the Dominion Government, with the  
rank of a deputy minister.

That the Board of Railway Commis-  
sioners is considering the question of  
ordering table d'hôte meals to be served  
on railway dining cars at fixed prices, as  
the U.S. Railroad Administration has  
done.

## Canadian Government Railways Construction, Betterments, etc.

Prince Edward Island Ry.—See under  
"Standardizing the P.E.I. Ry." on an-  
other page of this issue.

Halifax Ocean Terminals.—We are offi-  
cially advised that the construction of  
certain works and buildings of a more or  
less temporary character at the Halifax  
Ocean Terminals is progressing favor-  
ably, and that it is expected that these  
will be completed by Dec. 1. Following  
are the works in progress:—Temporary  
station, mail, baggage, express and com-  
missariat buildings, in the shape of an L,  
the station proper being 174 x 80 ft., and  
the baggage, mail, express and commis-  
sariat part being 240 x 50 ft.; a car clean-  
ing shop, stores and ice house building,  
382 x 51 ft. The passenger tracks in con-  
nection will have storage capacity for 170  
cars, and the freight tracks will have  
storage capacity for 730 cars. In addi-  
tion, there will be a team yard which will  
have tracks for 50 cars, for loading and  
unloading. Water and gas systems are  
being provided, and in the passenger  
yards there will be installed the regular  
gas, air and heating pipes.

Sackville to Cape Tormentine.—The  
work of replacing ties and rebalancing  
this branch line is reported to have been  
completed during the summer.

Tenders for new buildings.—Tenders  
are under consideration for the erection  
of a wooden stores building at Campbel-  
ton, N.B., and for the erection of a wood-  
en car shop at Edmundston, N.B.

Long Wharf, St. John.—Work is re-  
ported to have been started by D. C. Clark  
on repairs to the Long Wharf, at St.  
John, N.B., on which the Intercolonial Ry.  
has tracks and a shed. The work is being  
done in preparation for the heavy winter  
traffic. (Oct., pg. 437.)

# Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

**Canadian Engineers at Cambrai.**—The Canadian Press special correspondent with the Canadian forces at the front in cabling on Oct. 10 about the capture of Cambrai, said:—"Among the brilliant episodes of the final assault was the gallant act of a captain of Canadian Engineers who comes from Winnipeg. He was reconnoitering, early yesterday morning, the crossing of the Scheldt River, which it was of the utmost importance we should make in good order to close our northern end of the pincers down upon the southern end created by the fine advance of the Imperial troops south of Cambrai. The river here has three distinct arms, traversed by three bridges. He found that the enemy had destroyed the first bridge and were about to destroy the second. Unaided, he charged them, shooting down five boches and saving the bridge. . . . The Canadian Engineers established a pontoon bridge over the canal at 6 o'clock."

**Canadian Government Railway Employees on active service.**—Out of the approximately 20,000 employees in Canadian Government Railways service, 1,630 have enlisted in the Canadian Expeditionary Forces, a percentage of 8.15. Of these, 11 died while training, 78 were killed in action and 5 were posted as missing.

**Canadian Pacific Ocean Services, Ltd.,** has been conducting numerous trips on the Avon at Bristol, and the Mersey at Liverpool, Eng., for wounded soldiers, which have been much enjoyed by those taking part in them. The arrangements for taking the men to and from the company's vessels are made by the enquiry bureau, and sports are conducted on board and prizes given. A band accompanies the men, and everything is done to make the trip thoroughly enjoyable. The whole arrangements are supervised by Major H. Maitland Kersey, D.S.O., the company's Managing Director.

**Canadian Railway Troops,** drafts 157 and 169 from Niagara on the Lake, Ont.; draft 173 from Toronto, and draft 174 from St. John, N.B.; and Engineers, drafts 158 and 172 from Brockville, Ont., have arrived safely in England.

**Canadian Railway Troops' Work.**—A Canadian Association Press dispatch of Oct. 1 says:—"In the fighting which followed the fall of the Drocourt system on the Western front, the motor and horse ambulances had more than they could handle at times. So the Canadian railway troops rushed up flat cars, loaded the wounded on them and made several trips to the field ambulance stations until the congestion was reduced. Steel laying and maintenance gangs did temporary duty as stretcher bearers from the regimental aid posts and advanced dressing stations to the railway cars. Meanwhile there was no interference with the scheduled service of work and supply trains. At present light railways and tramways are threaded through different points close to the Nord Canal, and are saving

the use of a great deal of motor and horse transport. So efficient has been the service rendered in the Arras area, that the army and corps commanders have expressed their thanks to the Canadian railway troops, and been generous with encomiums."

The Canadian Railway Troops are reported to have built over 100 miles of line, extending back as far as 10 miles, since Aug. 21.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association had, up to the last report, contributed \$92,748.41 to the Canadian Red Cross and Canadian Patriotic Association funds.

## PERSONAL NOTES.

**Major H. G. Barber,** Edmonton, Alta., of the Canadian Railway Troops, has been awarded the Distinguished Service Order for conspicuous gallantry and devotion to duty while supervising light railways. Under his supervision valuable stocks of light railway material and coal were saved, maintenance work was carried out, and railway lines patrolled up to the last possible moment. The good work performed by his men was largely due to his coolness, perseverance and inspiring example, while frequently under fire night and day.

**Corporal G. E. Bayliss,** Canadian Overseas Railway Construction Corps, has been awarded the Distinguished Conduct Medal, for conspicuous gallantry and devotion to duty in maintaining and repairing a track, which was continuously under shell fire. It was largely due to his skill and untiring energy that nine railway mounted guns and howitzers were successfully removed. He controlled his men with great coolness, working continuously for 45 hours.

**Lieut. A. J. Easterbrook,** reported wounded in the leg, was, prior to going overseas, on the C.P.R. office staff at Moose Jaw, Sask. He enlisted on the outbreak of the war, and went to France as a sergeant in the Princess Patricia of Connaught's Light Infantry. He was wounded in the neck with shrapnel last year, and this year was awarded a commission on the field.

**Acting Sergeant W. G. Geron,** Railway Troops, has been awarded the Distinguished Conduct Medal for conspicuous gallantry and devotion to duty in emergency work on light railway lines in forward areas under intense hostile fire. On one night he personally supervised the repair of 43 shell breaks, requiring nearly 1,400 ft. of new steel, and kept the light railway lines open for traffic. He was in charge of a party working for three hours in gas masks, sending forward urgently required ammunition. His courage and example in these and other instances were an inspiration to those working with him.

**Lieut. R. S. Johnston,** a civil engineer, loaned by the U.S. Government for duty in connection with the erection of naval air stations on the Canadian coast, died at the residence of Admiral Sir C. E. Kingsmill, Ottawa, Ont., Oct. 14, from influenza.

**Lieut.-Col. W. B. Kingsmill,** D.S.O., who went overseas in command of the 123rd Battalion, about two years ago, has returned home on three months leave. He is a member of the firm of Saunders, Torrance & Kingsmill, Solicitors in Canada for the Michigan Central Rd.

**Capt. Albert H. Kendall,** who has been

awarded the Military Cross, for superintending evacuation under heavy fire and keeping lines running until the last moment, went overseas early in 1917, as Captain, No. 1 Section, Skilled Railway Employes, and is now with the 58th Broad Gauge Operating Company, British Expeditionary Force in France. He was born at Aspatia, Cumberland, Eng., Apr. 4, 1878, and completed his apprenticeship in the Canada Atlantic Ry. shops at Ottawa, Ont., in June, 1910, since when he has been, to Mar., 1902, machinist, C.P.R.; Revelstoke, B.C.; Mar., 1902, to Jan., 1903, Locomotive Foreman, C.P.R.; Nakusp, B.C.; Jan. to Dec., 1903, General Foreman, C.P.R.; Revelstoke, B.C.; Dec., 1903, to Dec., 1904, Locomotive, G.T.R., London, Ont.; Dec., 1904, to Dec., 1913, leading hand, General Erecting Foreman, Angus Shops, C.P.R., Montreal; Dec., 1913, to Aug., 1915, General Foreman, C.P.R., North Bay, Ont.; Apr., 1915, to Aug., 1916, Assistant Works Manager, Locomotive Shop, Angus Shops, C.P.R., Montreal; Aug., 1916, to Jan., 1917, Master Mechanic, Ontario District, C.P.R., Toronto.

**Lieut.-Col. Hon. Angus McDonnell,** of the Canadian Railway Troops, and formerly of Grant, Smith & McDonnell, Ltd., railway and general contractors, Vancouver, B.C., has been made a Companion of the Order of St. Michael and St. George.

**Corporal W. S. McNab,** reported to have been wounded a second time, is a son of W. McNab, Chairman, Valuation Committee, G.T.R., Montreal. Two other sons are in active service in France.

**Sergeant J. A. McPhail,** Railway Troops, has been awarded the Distinguished Conduct Medal. Alone under heavy shell fire he patrolled his district and repaired many blowouts. Owing to his good work the track was kept open and passage allowed for 26 trains containing ammunition and other supplies.

**Edmond George Moorhead,** a recent recruit in the Royal Air Force, died at the Base Hospital, Toronto, Oct. 14. He was born Feb. 10, 1896, and entered C.P.R. service as junior clerk, Superintendent's office, London, Ont., Apr. 1, 1912, and after various changes was appointed secretary to the Vice President (Sir George Bury), May 17, 1917, and on July 1, 1918, was appointed assistant chief clerk, Vice President's office, and was given leave of absence, Oct. 1, for military service.

**Major E. F. Pullen,** Haileybury, Ont., of the Canadian Railway Troops, has been awarded the Distinguished Service Order, for energy and devotion to duty displayed while commanding his company throughout the operations, which were a conspicuous example to his men, whom he has led, and whose work he has organized in the forward area. On two different occasions he rallied considerable numbers of stragglers from other units, and leading them back to the front, placed them again under their officers and warrant officers, and their services, when badly wanted, were instrumental in defeating the enemy. His complete disregard of personal safety had a most inspiring effect on his men, and his intelligent dispositions, often under heavy fire, enabled him to keep his line open as long as it was required, and much material was saved.

**C. E. Payne,** chief clerk, Freight Department, Canadian Northern Ry., Fort

William, Ont., was presented with a gold wrist watch by the local staff recently, on leaving to take up military service under the United States draft regulations.

**Colonel C. W. P. Ramsey, C.M.G.**, formerly Engineer of Construction, Eastern Lines, C.P.R., Montreal, was married in London, Eng., Sept. 19, to Miss Dorothy Jackson, youngest daughter of Sir John Jackson, M.P., of Sir John Jackson, Ltd., and Sir John Jackson (Canada), Ltd., general contractors. Col. Ramsey went overseas in 1915 in command of the Canadian Overseas Railway Construction Corps, with the rank of Lieutenant-Colonel, and was created a Companion of the Order of St. Michael and St. George in June, 1916, for services in the field. He was recently promoted to Colonel, and seconded for duty with the War Office.

**Private Thos. Robertson**, who enlisted with the University contingent of the 196th Battalion, in Apr., 1916, and later transferred to the Canadian Mounted Rifles, has died from wounds. Before enlisting he had been in Canadian Northern Ry. service since 1913, having been station ticket clerk at Saskatoon, Sask., city ticket clerk, Saskatoon, and from Nov., 1915, chief clerk to District Passenger Agent there.

**C. Spencer, Duncan, B.C.**, formerly a locomotive man on the C.P.R., is mentioned as the hero of the following story: Stealing out across No Man's Land, without orders, he climbed aboard a dead German locomotive attached to 16 cars of ammunition, and while enemy sentries paced back and forth, he got up steam, gave the locomotive a few kicks back to allay suspicion, and then threw her over, opened the throttle wide, and steamed away to the British lines, and was well inside before the surprised Germans realized what had happened. It is said that he was "penalized" by the commanding officer, with a commission as lieutenant.

**Brigadier-General Stewart**, formerly of Foley Bros., Welch & Stewart, contractors, Vancouver, has been appointed Director-General of Construction in the British Army, with supreme command over all railways, docks, etc. The addition of the command over the docks in France will entail a great deal of extra labor and responsibility.

**Company Sergt.-Major S. Underwood**, Railway Operating Company, has been awarded the Distinguished Conduct Medal. On several occasions he displayed great gallantry in the performance of his duties, setting a fine example to others and rendering conspicuous service. He saved much railway material and ammunition when he had to pass with a locomotive within a short distance of several dumps on fire, from which a large number of shells were exploding. On one occasion he ran his locomotive into some forward gun positions and remained there under heavy shell fire, assisting to pull out and save some heavy guns with their ammunition and equipment. He performed valuable service with complete unconcern for his personal safety.

**Major H. A. Wood, M.C.**, of the Royal Air Force, who is establishing a camp at Collinstown, Ireland, is a son of D. O. Wood, formerly of the Allan Line and C.P.R. service, now Superintendent Inland Transportation, British Ministry of Shipping (Canada). He graduated from the School of Practical Science, Toronto University, in Apr., 1915, with the degree of B.A.Sc., and entered the Toronto Harbor Commission's service in the same year, under the Chief Engineer. He received a commission as lieutenant in the Corps of Guides and went overseas in Nov.,

1915, joining the Royal Flying Corps in England, where he received his training. He was later selected as a flying patrol man and sent to France in June, 1916, and began his work in the Somme offensive on July 1, 1916. He was made a captain on the field in Nov., 1916. He was awarded the Military Cross in June, 1917, for good services in France, having, after nine months of flying, many enemy machines to his credit, and several narrow escapes. In that year, he was transferred to duty in the United Kingdom, having passed through his service in France without a scratch, and with nerves unshattered. On account of his knowledge of the airplane, and being a science graduate, he was selected to lecture in instruction camps to young officers, on the various subjects connected with the flying course, and he also designed a strengthener for the substructure of certain battle planes, which was adopted by the Air Board, and is now being used. He was promoted to the rank of Major in March, 1918, just prior to his 24th birthday, and specially selected to establish the first Royal Air Force training camp in Ireland, the one on which he is now engaged being a second one.

### Wages of Clerical, Station and Similar Forces on Railways.

In reference to the Canadian Railway War Board's decision to put into effect, as from Sept. 1, rates of pay and conditions as outlined in supplement 7 to general order 27 of the Director General of the United States Railroad Administration, on the basis of the interpretations published in full on pages 478 to 480 of this issue, the board issued the following circular Oct. 17 to railways operating in Canada:—

Supplementing the board's circular of September 30, embodying supplement 7, to general order 27 and interpretations thereto, the following additional interpretations have been obtained and will govern in applying the provisions of supplement 7 on railways in Canada, effective as from Sept. 1, 1918.

#### Article 1.

Question 1—Does article 1, clause A, apply to all clerical forces to which minimum of \$87.50 a month is granted? Answer—Yes. (Note: Owing to the inequalities and probable dissatisfaction arising from application of \$87.50 minimum to employees new to the service, such as beginners at stenography, comptometer operators, ticket sorters, and junior clerks, as well as to the more experienced and competent employees to whom the same rate at present applies, it is anticipated that a revision of classification will shortly take place, providing for the establishment of an "apprentice" class, in which will be included positions such as those specifically mentioned above and to which a lower rate will apply. It is anticipated that the proposed "apprentice clerk" classification will provide for a reasonable age limit and that \$25 per month increase, without the \$87.50 minimum, will be awarded. It is suggested that employees who are concerned in the anticipated reclassification be informed as to what is contemplated, with a view to avoiding possible difficulty when the reductions are made effective.)

Question 2—Under what clause should red cap porters be considered? Answer—Article 1, clause C.

#### Article 2.

Question 3—Is it permissible to retain stationary engineers, "steam" firemen and

power house oilers on other than monthly basis? Answer—Hourly rates may be continued, provided established minima are paid.

#### Article 5.

Question 4—Is it proposed to give any further consideration to question of overtime worked by employees named in this article, though working alongside men provided for by supplement 4? Supplement 7 allows pro rata for 9th and 10th hours, whereas supplement 4 provides time and a half over eight hours worked? Answer—Not at present. There is a possibility of further consideration.

#### Article 6.

Question 5—Are parlor, sleeping and dining car employees, conductors, porters, stewards, waiters, cooks and help intended to be provided for by supplement 7? Answer—No, general order 27.

Question 6—Is station restaurant help intended to be provided for by supplement 7? Answer—No, general order 27.

#### Article 10.

Question 7—Is it the intent to grant \$25 a month increase in salaries in effect Jan. 1, 1918, irrespective of reduction of hours, as result of application article 10? The text of supplement does not make clear how this is applied to hourly rated employees? Answer—Yes, irrespective of hours previously worked, for an 8-hour day, but not to produce a rate in excess of the maximum given.

#### Articles 12 and 13.

Question 8—Is it the intent that these articles be literally and generally applied? Answer—Yes; in matter of investigations, absolutely yes; in matter of seniority, generally speaking, yes. Clerks themselves were in doubt what they wanted, so can give no definite opinion at present.

Interpretations embodied in circular of Sept. 30, 1918, which conflict with the foregoing are hereby cancelled.

In view of the present labor situation in some parts of Canada it is highly desirable that the railways place in effect without delay the provisions of supplement 7, with interpretations which have been provided, and that the employees concerned be informed promptly, by posting of notices, or other suitable methods, that such action is being taken.

Pay for back time, due under the provisions of supplement 7, which was not included in payrolls already completed, should be arranged for in preparation of those for the second half of the current month where this can be done, or as soon thereafter as possible.

**Transportation and the cost of living.**—Under the War Measures Act, 1914, with a view of preventing undue enhancement of the cost of living, the Dominion Government issued in Nov., 1916, orders 2777 and 2957, in which certain defects have been discovered in the course of administration. By an order dated Oct. 4, these two orders are rescinded, and a new one issued which provides among other things that: "No person shall conspire, combine, agree or arrange with any other person to limit the facilities for transporting . . . any necessary of life."

**A. W. Smithers**, Chairman of the Board, G.T.R., is expected in Montreal shortly to make his annual inspection trip over the line. It is reported that during his visit he will discuss with the Dominion Government the question of the acquirement of the G.T.R. and the G.T. Pacific Ry. for the Dominion.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Canadian Government Railways.**—C. F. BURNS, Auditor of Disbursements, Moncton, N.B., died there, Oct. 16.

**Canadian Northern Ry.**—M. H. MACLEOD, heretofore General Manager and Chief Engineer, Western Lines, Winnipeg, has been appointed Vice President, in charge of operation, construction and maintenance, all lines. Office, Toronto.

G. R. EDGLEY, heretofore General Agent, Quebec, Que., has been appointed acting Superintendent, Saguenay Division, Quebec District, vice J. H. Davidson, Superintendent, deceased. Office, Quebec, Que.

J. J. NOONAN, heretofore Assistant to General Agent, Quebec, Que., has been appointed acting Freight Agent there.

HUGH MACDONELL, who was a member of the Canadian Expeditionary Force, and a prisoner of war until he escaped, has been appointed Right of Way and Claims Agent, Eastern Lines, vice J. Barbour, deceased. He reports to the General Solicitor. Office, Toronto.

A. E. WARREN, heretofore Assistant to General Manager, Western Lines, has been appointed General Manager, Western Lines. Office, Winnipeg.

W. C. POTTS has been appointed inspector, Sleeping and Dining Cars and News Service, Winnipeg.

F. TAYLOR, heretofore Sleeping and Dining Car Agent, Edmonton, Alta., is reported to have been appointed Sleeping and Dining Car Agent, Winnipeg.

E. G. WICKERSON, heretofore Passenger Agent, Prince Albert, Sask., has been appointed City Ticket Agent, Saskatoon, Sask., vice W. A. Vanalstine, transferred.

W. A. VANALSTINE, heretofore City Ticket Agent, Saskatoon, Sask., has been appointed Travelling Passenger Agent there, vice E. Bower, enlisted for active military service.

W. F. WOODS has been appointed Passenger Agent, Prince Albert, Sask., vice E. G. Wickerson, transferred.

L. BARNES has been appointed Sleeping and Dining Car Agent, Edmonton, Alta., vice F. Taylor, transferred.

J. G. CAMERON has been appointed Trainmaster, Calgary and Hanna Subdivisions, vice R. J. Kelly, transferred. Office, Hanna, Alta.

R. J. KELLY, heretofore Trainmaster, Calgary and Hanna Subdivisions, Hanna, Alta., has been appointed Trainmaster, Battle River, Brazeau, Strathcona and Alliance Subdivisions, vice S. S. Foley, assigned to other duties. Office, Big Valley, Alta.

S. S. FOLEY, heretofore Trainmaster, Big Valley, Alta., has been appointed agent, Richdale, Alta.

L. McCUTCHEON has been appointed Travelling Freight Agent, Vancouver, B.C.

C. C. LABRIE, Accountant, Construction Department, Vancouver, has been appointed also Purchasing Agent there, vice J. H. Hoare, resigned.

A number of changes are about to be made in the accounting and auditing departments, among officials at Toronto and Winnipeg, but particulars of them were not available up to Oct. 31.

**Canadian Pacific Ry.**—The Right Hon. LORD SHAUGHNESSY, K.C.V.O., having

resigned from the Presidency, has been elected Chairman of the Company. His previous title was President and Chairman of the Company.

M. H. MacLeod  
Vice President, Operation, Construction and Maintenance, Canadian Northern Railway.

Allan Purvis,  
General Superintendent, Ontario District, Canadian Pacific Railway.

E. W. BEATTY, K.C., heretofore Vice President and General Counsel, has been elected President, vice Lord Shaughnessy, resigned. Office, Montreal.

GRANT HALL, heretofore Vice President and General Manager, Western Lines, Winnipeg, has been appointed Vice President, with jurisdiction over all lines, vice Sir George Bury, resigned. Office, Montreal.

A. D. MACTIER, heretofore General Manager, Eastern Lines, has been appointed Vice President in charge of lines east of Port Arthur, Ont., reporting to the Vice President, Grant Hall. Office, Montreal.

D. C. COLEMAN, heretofore Assistant General Manager, Western Lines, has been appointed Vice President in charge of lines west of Port Arthur, Ont., reporting to the Vice President, Grant Hall. Office, Winnipeg.

A. PRICE, heretofore Assistant General Manager, Eastern Lines, has been appointed General Manager, Eastern Lines, vice A. D. MacTier, promoted. Office, Montreal.

G. HODGE, heretofore Assistant to General Manager, Eastern Lines, has been appointed Assistant to Vice President, Eastern Lines. Office, Montreal.

W. J. ROBIDER, heretofore Master Car Builder, Central of Georgia Ry., Savannah, Ga., has been appointed General Master Car Builder, C.P.R., vice C. W. Van Buren, deceased. Office, Montreal.

W. J. PICKRELL, heretofore Assistant Superintendent, Farnham Division, Quebec District, Farnham, Que., has been appointed Master Mechanic, New Brunswick District, vice C. Gribbin, transferred. Office, St. John, N.B.

J. P. DOHERTY, heretofore chief clerk to Port Agent, Canadian Pacific Ocean Services, Ltd., Quebec, Que., has been appointed Travelling Freight Agent, C.P.R., vice J. E. Green, transferred.

J. M. WOODMAN, heretofore Superintendent, Montreal Terminals Division, Quebec District, Montreal, has been appointed General Superintendent, Quebec District, vice Allan Purvis, transferred. Office, Montreal.

K. F. NYSTROM, heretofore chief draftsman, Car Department, G.T.R., Montreal, has been appointed chief draftsman, Chief Mechanical Engineer's office, C.P.R., Montreal.

M. W. BARD, heretofore Assistant Superintendent, Farnham Division, Quebec District, was, on Oct. 1, appointed acting Superintendent, and subsequently W. J. UREN, heretofore Superintendent, Trenton Division, Ontario District, was appointed Superintendent, Farnham Division, Quebec District, vice J. B. Blair, transferred. Office, Farnham.

J. B. BLAIR, heretofore Superintendent, Farnham Division, Quebec District, Farnham, has been appointed Superintendent, Montreal Terminals Division, Quebec District, vice J. M. Woodman, promoted. Office, Montreal.

R. A. SEWELL, heretofore Assistant Superintendent, Trenton Division, Ontario District, has been appointed Assistant Superintendent, Montreal Terminals Division, Quebec District, vice R. W. Scott, promoted. Office, Montreal.

T. A. WILSON, heretofore Assistant Superintendent, Smiths Falls Division, Quebec District, has been appointed Superintendent, Smiths Falls Division, Quebec District, vice J. K. Savage, promoted. Office, Smiths Falls, Ont.

C. H. TOWLE, heretofore Assistant Superintendent, Brownville Division, New

Brunswick District, Brownville Jct., Me., has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, vice T. A. Wilson, promoted. Office, Smiths Falls, Ont.

ALLAN PURVIS, heretofore General Superintendent, Quebec District, Montreal, has been appointed General Superintendent, Ontario District, vice J. T. Arundel, who, the company very much regrets, has retired from the service. Office, Toronto.

J. K. SAVAGE, heretofore Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., has been appointed Assistant General Superintendent, Ontario District. This is a new position. Office, Toronto.

H. B. STEVENS, heretofore Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, Ont., has been appointed Assistant Superintendent, Havelock Division, Ontario District, vice R. G. Edwards, transferred. Office, Havelock, Ont.

R. W. SCOTT, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, Montreal, has been appointed Superintendent, Trenton Division, Ontario District, vice W. J. Uren, transferred. Office, Toronto.

A. MAYNES, heretofore Division Master Mechanic, London Division, Ontario District, London, has been appointed Division Master Mechanic, Bruce Division, Ontario District. Office, Toronto.

V. A. G. DEY, heretofore Assistant Engineer of Construction, has been appointed Resident Engineer, Toronto Terminals, vice G. H. Davis, promoted.

R. G. EDWARDS, heretofore Assistant Superintendent, Havelock Division, Ontario District, Havelock, Ont., has been appointed Assistant Superintendent, London Division, Ontario District, vice F. S. Rosseter, transferred. Office, London, Ont.

C. GRIBBIN, heretofore Master Mechanic, New Brunswick District, St. John. N.B., has been appointed Division Master Mechanic, London Division, Ontario District, vice A. Maynes, transferred. Office, London, Ont.

J. R. CASWELL has been appointed Engineer, London Division, Ontario District, vice J. M. Silliman, resigned to enter Delaware & Hudson Ry. service. Office, London, Ont.

F. S. ROSSETER, heretofore Assistant Superintendent, London Division, Ontario District, London, Ont., has been appointed Assistant Superintendent, Sudbury Division, Algoma District, vice H. B. Stevens, transferred. Office, Sudbury, Ont.

C. MURPHY, heretofore General Superintendent, Manitoba District, Winnipeg has been appointed General Manager Western Lines. Office, Winnipeg.

C. E. STOCKDILL, heretofore Assistant to Vice President and General Manager, Western Lines, Winnipeg, has been appointed Assistant to Vice President Western Lines. Office, Winnipeg.

E. C. P. CUSHING, heretofore private secretary to the President (Lord Shaughnessy), Montreal, has been appointed Purchasing Agent, Winnipeg.

A. E. STEVENS, heretofore General Superintendent, Saskatchewan District, Moose Jaw, has been appointed General Superintendent, Manitoba District, vice C. Murphy, promoted. Office, Winnipeg.

A. J. PENTLAND, heretofore Locomotive Foreman, Transcona, Man., has been appointed Locomotive Foreman, Regina, Sask., vice A. S. McDonald, transferred.

W. A. MATHER, heretofore Assistant General Superintendent, British Columbia

District, Vancouver, has been appointed General Superintendent, Saskatchewan District, vice A. E. Stevens, transferred. Office, Moose Jaw.

GEO. A. WALKER will perform the duties of Manager of the Natural Resources Department, with the title of act-

G. M. Wilson,  
Superintendent of Motive Power Shops, Grand  
Trunk Railway, Montreal.

C. H. Towle,  
Assistant Superintendent, Smiths Falls Division,  
Quebec District, Canadian Pacific Railway.

ing Manager, during the absence of P. L. Naismith, Manager.

C. A. COTTERELL, heretofore Superintendent, Medicine Hat Division, Alberta District, Medicine Hat, has been appoint-

ed Assistant General Superintendent, British Columbia District, vice W. A. Mather, promoted. Office, Vancouver.

C. S. MAHARG, heretofore Superintendent, Brandon Division, Manitoba District, Brandon, Man., has been appointed Superintendent, Cranbrook Division, British Columbia District, vice A. C. Harshaw, transferred. Office, Cranbrook, B.C.

Canadian Pacific Ocean Services, Ltd.—Lieut.-Col. F. A. GASCOIGNE, D.S.O., formerly Superintendent, Car Service, Eastern Lines, C.P.R., Montreal, has been appointed Secretary-Treasurer, C.P.O.S., Ltd. Office, Montreal.

Grand Trunk Ry.—Owing to the illness and enforced absence for some months of U. E. GILLEN, Vice President in charge of transportation, the duties of that office have been assumed by W. D. ROBB, Vice President in charge of motive power.

W. H. SAMPLE, heretofore Superintendent Motive Power and Car Department, Grand Trunk Western Lines Rd., Detroit, Mich., has been appointed General Superintendent, Motive Power and Car Departments, G.T.R. Office, Montreal.

J. M. ROSEVEAR has been appointed General Auditor, G.T.R. and Grand Trunk Pacific Ry. Office, Montreal.

J. F. AITCHISON, heretofore special auditor, has been appointed acting Auditor of Disbursements, G.T.R. and Grand Trunk Pacific Ry., vice J. M. Rosevear, Auditor of Disbursements, promoted. Office, Montreal.

W. McNAB, heretofore Valuation Engineer, has been appointed Chairman, Valuation Committee, vice H. R. Safford, Chief Engineer, who has left the service. Office, Montreal. This is a board of G.T. R. officials formed in accordance with an act of the U.S. Congress, directing the Interstate Commerce Commission to secure the valuation of all property owned or used by common carriers.

A. CRUMPTON, heretofore Assistant Valuation Engineer, has been appointed Valuation Engineer, vice W. McNab, promoted. Office, Montreal.

W. A. PITT, Foreman Machine Shop, Montreal, has been appointed Assistant Master Car Builder, Montreal shops.

I. N. CLARK, heretofore Assistant Master Car Builder, London shops, has been appointed Master Car Builder, Ontario Lines, vice T. A. Treleaven, retired under the pension rules. Office, London, Ont.

J. BROOKS, Foreman, Passenger Car Shops, Montreal, has been appointed Assistant Master Car Builder, London shops, London, Ont., vice I. N. Clark, promoted.

Grand Trunk Pacific Ry.—J. M. ROSEVEAR has been appointed General Auditor, G.T.R. and G.T.P.R. Office, Montreal.

J. F. AITCHISON has been appointed acting Auditor of Disbursements, G.T.R. and G.T.P.R. Office, Montreal.

G. U. RYLEY, Land Commissioner, Winnipeg, having retired from the service, the position has been abolished, the land and town sites departments being placed under the Land and Tax Agent there.

H. E. BISSELL, heretofore Right of Way and Claims Agent, has been appointed Land and Tax Agent, and his former position has been abolished. He continues to deal with right of way matters. Office, Winnipeg.

H. H. HANSARD, Solicitor, has had his jurisdiction extended over the Claims Department, and deals with all correspondence and reports pertaining to claims on account of injuries to persons or live stock. Office, Winnipeg.

P. C. PERRY, heretofore instrument man, Edmonton, Alta., has been appointed Assistant Resident Engineer, Regina, Sask., reporting to the Resident Engineer, Melville, Sask.

G. MURRAY, heretofore instrument man, Regina, Sask., has been appointed Resident Engineer, Melville, Sask., vice S. Smith, promoted.

S. SMITH, heretofore Resident Engineer, Melville, Sask., has been appointed Assistant Superintendent, Edson, Alta.

Grand Trunk Western Lines Rd.—B. J. FARR, heretofore Master Mechanic, G.T.R., Battle Creek, Mich., has been appointed Superintendent Motive Power and Car Department, G.T.W.L.R., vice W. H. Sample, resigned to re-enter G.T.R. service. Office, Detroit, Mich.

Michigan Central Rd.—W. J. SHAW, heretofore Assistant Division Engineer, St. Thomas, Ont., is reported to have been appointed Division Engineer, there, vice J. E. Johnson, resigned.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—G. R. HUNTINGTON, Federal Manager, Minneapolis, Minn., has had his jurisdiction extended over the Mackinac Transportation Line and the Sault Ste. Marie union station.

New York Central Rd.—A. L. MILLER, heretofore General Agent, Montreal, has been appointed General Agent, at Albany, N.Y.

Northern Navigation Co.—E. W. HOLTON, heretofore General Passenger Agent, has been appointed General Freight Agent in charge of Freight Traffic, and the Passenger Department has been placed under the supervision of the Manager, H. H. Gildersleeve. Office, Sarnia, Ont.

F. D. GEOHEGAN has been appointed Eastern Passenger Agent to assist the Manager in the Passenger Department. Office, Sarnia, Ont.

Reid Newfoundland Co.—J. McNEIL FORBES is reported to have been appointed to develop the natural resources of the company's properties.

## The United States Railroad Administration's Work.

**Loans to Railways.**—Believing that it will be for the general welfare and a factor in beneficially stabilizing money rates, the Director General announces that as to all railway mortgage bond issues which may mature between the present time and July 1, 1919, where railway companies may find it impracticable to obtain money for the renewal of their maturing bonds at a rate of interest which the Director General may feel warranted in approving, he will lend to all such companies on safe and reasonable security at the rate of 6%, such funds as may be necessary to pay off their maturing issues of mortgage, equipment, or debenture bonds. The aid thus rendered by the Director General to maintain on a moderate basis the rates of interest which railways may be required to pay on loans must not be interpreted by them as relieving them of their duty and responsibility of using their best efforts to provide for their own financial needs as occasions arise, but is intended to give them assurance that the money required for their legitimate needs, and for which they can offer satisfactory security, can be obtained without their being required to pay exorbitant or unreasonable rates or commissions.

**Meals for Army and Navy Men.**—The Railroad Administration and the War and

Navy Departments have agreed upon an arrangement for furnishing meals in dining cars and restaurant stations to officers and enlisted men which is proving very popular with men in the service. The War and Navy Departments have raised the meal allowance to 75c. In some instances the former allowance was 50c and in others 60c. Orders have been issued that a substantial and appetizing table d'hôte meal be furnished for this sum. The weight of each article on the menu will equal or exceed the army and navy rations. The arrangement will apply to officers and men traveling at their own expense as well as to those who are traveling on government orders, and includes inducted men on their way to enter the service.

## Standardizing the Prince Edward Island Railway.

Previous to the building of the car ferry steamship Prince Edward Island, all traffic to and from Prince Edward Island was handled by steamships during the season of navigation between Pictou, N.S., and Charlottetown, P.E.I., and between Point du Chene, N.B., and Summerside, P.E.I., and in the winter by ice breaking steamships between Pictou, N.S., and Georgetown. Charlottetown is the capital and principal city of the province; Summerside being the principal town of the western end. In 1912, the demands for more adequate transportation facilities were met by the Dominion Government with a proposition to put on a car ferry between Cape Tormentine, N.B., and Carleton Point, P.E.I., now called Borden, a distance of 9 miles, and work was started on the construction of docks, with the necessary transfer facilities, in 1914. The car ferry steamship Prince Edward Island was built specially for this service, with a capacity of 12 of the largest standard freight cars, and being a very powerful ice breaker, has had no difficulty in operating during the winter.

Owing to the loss of shipping, and high freight rates, the burden of transporting all classes of merchandise to and agricultural products from the Island became so great that it has been deemed necessary to extend the standard gauge service from Borden to Charlottetown and Summerside. As the narrow gauge line must also be operated to connect up the remaining portion of the P.E.I. Ry., it became necessary to lay a third rail to take the standard cars, and this work is now under way; the mileage covered being as follows: Borden to Emerald Jct., 12.15 miles; Emerald Jct. to Charlottetown, 30.30 miles; Emerald Jct. to Summerside, 17.08 miles. Total, 59.48 miles.

The P.E.I. Ry. gauge is 3½ ft., and in order to keep the standard track on the centre of the roadbed it is necessary to line the ties and narrow gauge track over, remove spikes from the old rail and relocate the same on the ties. The ties formerly used on this railway were 7 ft. x 6 x 8 in., and since 1913 tie renewals have all been made with standard 8 ft. ties, so that on completion of this year's renewal some 60% of all ties in the third rail territory will be 8 ft. long. The rail being used is 67.5 lb. per yard, of peculiar section, 5 in. high and 4 in. wide on the base. It was rolled in the United States for the Russian Government, together with special angle bars, bolts and spikes.

Work was started last spring as soon as the ground was fit to work, with a Marion ditcher, widening cuts and embankments, which in a great many places

were too narrow to carry standard equipment. About 75% of this work is completed and about 10% of the tracklaying was completed on Oct. 1. It is expected to have standard cars running to Charlottetown and Summerside by Jan. 1 with the necessary facilities for handling them at both points, including transfer tracks, locomotive house alterations, turntables and shed accommodation.

Bridges are being replaced with second hand steel, released from the main lines, or supported by bents, where opportunity offers. All small openings are being renewed or replaced with concrete pipe culverts where the same can be done to advantage.

The work is being done by the railway forces, under the direct supervision of T. B. Grady, Superintendent, and Alex. Scott, Resident Engineer. The labor is mostly German, supplied from the internment camp at Amherst, N.S., with the necessary guards and officers. At present time there are approximately 100 men at work and this force will be increased as soon as possible.

## Canadian Northern Railway Earnings, etc.

Gross earnings, working expenses, net earnings, increases and decreases compared with those of 1917, from July 1, 1918.

	Gross earnings.	Expenses.	Net Earnings.	Increases or Decreases.
July	\$3,739,400	\$3,462,700	\$276,700	\$628,200
Aug.	3,933,300	3,433,700	499,600	91,600
Sept.	4,050,900	4,109,000	* 58,100	484,000
	\$11,723,600	\$11,005,400	\$718,200	\$1,205,800
Inc.	1,131,800	2,337,600		
Dec.			1,205,800	
	*Deficit.			

Approximate earnings for three weeks ended Oct. 21, \$3,302,200, against \$2,591,400 for same period 1917.

## Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, and increases or decreases, compared with those of 1917, from Jan. 1, 1918:

	Gross earnings.	Expenses.	Net Earnings.	Increases or Decreases.
Jan.	\$10,789,818	\$9,621,824	\$1,167,993	\$1,263,485
Feb.	9,574,302	8,893,404	590,898	1,396,151
Mar.	12,427,915	9,435,134	2,992,781	944,536
Apr.	13,328,849	9,873,459	3,455,390	719,588

June	12,577,286	9,765,139	2,812,147	1,103,759
July	12,374,165	10,204,153	2,170,012	1,589,995
Aug.	13,109,753	9,901,123	3,208,630	608,908
Sept.	13,584,771	10,463,330	3,121,441	625,710
	\$111,080,975	\$87,873,907	\$23,207,068	\$9,115,977
Inc.	1,687,459	10,802,536		
Dec.			\$9,115,977	

Approximate earnings for three weeks ended Oct. 21, \$10,491,000, against \$9,604,000 for same period 1917.

## Grand Trunk Railway Earnings.

	Gross earnings.	Expenses.	Net earnings.	Increases or Decreases.
Jan. to June	\$26,162,127	\$25,555,560	\$ 606,567	\$4,652,068
July	5,788,482	4,358,163	1,430,319	214,767
Aug.	6,106,006	4,325,751	1,780,255	656,719
	\$38,056,615	\$34,539,474	\$3,517,131	\$5,520,554
Inc.	4,432,430	8,213,011		
Dec.			\$3,780,581	
	*Decreases.			

Approximate earnings for September, \$6,350,870, and for three weeks ended Oct. 21, \$4,190,691, against \$4,465,678 and \$2,020,745 for same periods 1917.

## Grand Trunk Pacific Ry. Earnings.

Earnings for August, \$411,364, against \$486,819 for Aug., 1917; aggregate for two months ended Aug. 31, \$849,211, against \$976,829 for same period 1917. Approximate earnings for three weeks ended Oct. 21, \$331,194, against \$328,612 for same period 1917.

## Traffic Orders by Board of Railway Commissioners.

### Storage of ex-Lake Grain at Montreal.

27714. Sept. 27. Whereas the Montreal Harbor Commissioners, by bylaw 104, issued Sept. 20, 1918, to become effective Oct. 1, 1918, have reduced the period within which grain may be stored in their elevators at Montreal, free of storage, from 20 days to 10 days, the said Harbor Commissioners not being subject to the board's jurisdiction; and whereas the G.T.R., relying on the Harbor Commissioners' bylaw previously in force, announces in its tariff that the grain carried by its company from its lake ports is entitled to 20 days free storage, and has applied to the board for permission to amend its tariff so as to restrict the said free storage period to 10 days on and from Oct. 1, 1918, it is ordered that the G.T.R., or any other railway company which has made similar publication, be permitted to amend its tariff, or tariffs, as aforesaid; provided that should the Harbor Commissioners extend their free storage period beyond 10 days, the tariff, or tariffs, of the railway company, or companies, shall be simultaneously amended so as to provide for at least the same free storage period.

### Commercial Travellers' Fares and Baggage.

27718. Sept. 28. Re complaint of Dominion Travellers' Association, the Northwestern Canada Travellers' Association of Montreal, and the Commercial Travellers' Association of Canada, Toronto, against the proposed cancellation by the Quebec, Montreal & Southern Ry. Company and the Napierville Junction Ry. of reduced fares and special baggage allowance for commercial travellers. Upon reading what has been submitted on behalf of the complainants, it is ordered that the following schedules be, and they are hereby, suspended pending hearing on a date to be fixed by the board:—

Quebec, Montreal & Southern Ry.—Supplement 6 to C.R.C. 160; supplement 1 to C.R.C. 236; supplement 2 to C.R.C. 263.

Napierville Junction Ry.—Supplement 3 to C.R.C. 31; supplement 2 to C.R.C. 69; supplement 1 to C.R.C. 94.

### Freight Rates on Turnips.

27772. Oct. 21. Re in the matter of application of Toronto Board of Trade, on behalf of the Ontario Turnip Shippers' Association, for an order suspending the proposed tariffs of the Grand Trunk and Canadian Pacific Railways, to take effect Oct. 22, and of the Toronto, Hamilton & Buffalo Ry., to take effect Nov. 1, to apply on turnips, in carloads, from points in Ontario to points in the United States. Upon hearing the matter at Toronto, Oct. 17, the applicants and the railway companies being represented at the hearing, it is ordered that the Grand Trunk, Canadian Pacific and Toronto, Hamilton & Buffalo Railways be required to publish and file tariffs of joint through rates on turnips, in carloads, from the shipping points of the said companies to the principal destinations in the southern United States, as arranged between the parties, that shall not exceed the lowest combination of rates to and beyond Buffalo, N.Y., or to and beyond basing points commonly called the Ohio River Crossings, the said tariffs to become effective not later than Nov. 1, and may be filed on one day's notice, subject to the consent of the Interstate Commerce Commission. It is also

ordered that the said tariffs, when effective, shall supersede the tariffs complained against; and it is further ordered that order 27439, July 17, 1918, be rescinded.

### Freight Rates on Building Materials.

27773. Oct. 22. Re complaint of Canadian Manufacturers' Association against the increases shown in the special tariffs filed by railway companies on what are described as "building materials." Upon its appearing that commodity tariffs published and filed by the Grand Trunk, Canadian Pacific, Canadian Northern, Toronto, Hamilton & Buffalo, Quebec, Montreal & Southern, Napierville Junction, Dominion Atlantic, Glengarry & Stormont, and Chatham, Wallaceburg & Lake Erie Railways, and the New York Central, Michigan Central, Pere Marquette and Wabash Railroads show rates that have been increased more than the 25% provided for by sec. 1 (b) of the order in council 1863, dated July 27, 1918, the said tariffs being those applicable to building, road and drainage materials, and raw materials therefor; and upon reading the report and recommendation of the board's Chief Traffic Officer, it is ordered that the said rates, to the extent that they exceed those provided for by the said order in council, be disallowed, and the said railway and railroad companies are hereby permitted, on one day's notice to the public and to the board, to republish and refile the said rates in accordance with the said order in council.

### Milling in Transit Charge on Grain East of Fort William.

27781. Oct. 28. Re application of Quaker Oats Company for an order suspending various C.P.R. schedules published to become effective Nov. 1, increasing its milling in transit charge on grain east of Fort William from 1c to 2c per 100 lb. Complaints having also been filed with the board against the proposed increased milling in transit charge by the Winnipeg Board of Trade, the Western Canada Flour Mills Co., N. M. Patterson & Co., and the Anchor Elevator Company, Winnipeg, it is ordered that the effective date of all schedules filed by the Canadian Pacific, Canadian Northern, Grand Trunk, and Grand Trunk Pacific Railways providing for an increase to 2c per 100 lb. for milling in transit, be delayed pending hearings and further order of the board.

**Canadian Railway Club.**—Consequent on the accidental death of the President, C. W. Van Buren, General Master Car Builder, C.P.R., the following officers were elected at a meeting of the executive committee, Oct. 8:—President, T. C. Hudson, Master Mechanic, Quebec District, Canadian Northern Ry.; First Vice President, J. Hendry, Master Car Builder, G.T.R.; Second Vice President, W. H. Winterrowd, Chief Mechanical Engineer, C.P.R.; member of the executive committee, E. R. Battley, Superintendent of Motive Power, Eastern Lines, G.T.R.

**Steel Rail Deliveries.**—We were officially advised Oct. 19 that the Dominion Iron & Steel Co., Sydney, N.S., had rolled 89,425 tons of steel rails out of the 100,000 tons ordered by the Dominion Government and that 76,743 tons had been shipped to railways as below:—

Canadian Government Railways.....	14,309 tons
Canadian Northern Ry.....	18,528 "
Canadian Pacific Ry. Co.....	30,197 "
Grand Trunk Ry.....	13,708 "

## Railway Rolling Stock Orders and Deliveries.

The International Nickel Co., Port Colborne, Ont., has ordered 4 six-yard, 2-way, side dump cars, equipped with automatic couplers, from National Steel Car Co.

The Prince Edward Island Ry. has received 2 ten-wheel narrow gauge locomotives from Canadian Locomotive Co., the balance of an order placed for 4 of this type.

The Italian Government has ordered from the American Locomotive Co., 150 locomotives for use on the state railways. The contract price is said to exceed \$5,000,000.

The Canadian Northern Ry. has received 4 six-wheel switching locomotives from Canadian Locomotive Co., being the balance of an order placed by the Dominion Government.

The Grand Trunk Ry. has received 4 Mikado locomotives of the Canadian Government Railways type, from Canadian Locomotive Co., as part of an order placed by the Dominion Government.

The Canadian Car & Foundry Co. has delivered 894 steel frame box cars, 40 tons capacity, and 133 stock cars, 30 tons capacity, from its Montreal works, and 56 wooden box cars, which have been repaired at its Montreal and Amherst, N.S., works, to Canadian Government Railways.

The C.P.R., between Sept. 13 and Oct. 29, received the following rolling stock:—12 express refrigerator cars, 86 steel underframe box cars, 2 wooden single track snow ploughs, and 2 decapod locomotives from its Angus Shops, Montreal, and 3 vans from its Winnipeg Shops, and ordered one 29 ft. van from its Winnipeg Shops.

The Federal Malay States Government Railways, of Kuala Lumpur, India, have ordered underframes, brakes and trucks for 10 first class passenger cars, 10 second class passenger cars, 20 third class passenger and brake composite cars, and also underframes, brakes and trucks complete for 150 coal cars, from National Steel Car Co.

The Greater Winnipeg Water District Commissioners received tenders Oct. 28, for the purchase of 1 four-wheel switching locomotive, standard gauge, 35 tons, cylinders 16 x 26 in., water capacity 2,000 gals., coal capacity 3 tons, built by American Locomotive Co.; and 2 mogul (2-6-0) locomotives, standard gauge, 57 tons, cylinders 18 x 24 in., water capacity 5,000 gals., coal capacity 8 tons, built in 1914 by Montreal Locomotive Works.

The British-American Nickel Corporation, Murray, Ont., has ordered from Canadian Car & Foundry Co., 3 mine skip cars, with liners, bail and clevises. They will have chilled cast iron tread wheels pressed on the axles, instead of manganese steel, liner plates on bottom and rear of cars only, and to be of open hearth steel instead of manganese steel. They will weight 5 or 6 tons each and hold 7½ tons of ore, operating on a 36 degree incline at a speed of 1,500 ft. a minute. They are being built at the company's Montreal plant.

The Esquimalt & Nanaimo Ry. started the operation of an additional freight service between Victoria and Nanaimo, B.C., Oct. 15, by attaching a freight car to the daily northbound passenger train.

## Directors' Inspection of Canadian Northern Railway.

D. B. Hanna, President, and Robt. Hobson, one of the other C.N.R. directors, left Toronto, Oct. 4, for an inspection of the main line to Vancouver, R. P. Ormsby, the company's Secretary, accompanying them. S. J. Hungerford, General Manager, Eastern Lines, and A. F. Stewart, Chief Engineer, Eastern Lines, travelled with them to Port Arthur, where they were met by M. H. MacLeod, General Manager and Chief Engineer, Western Lines, and A. Wilcox, General Superintendent, Central Division. At Winnipeg they were joined by the two western directors, R. T. Riley, of Winnipeg, and C. M. Hamilton, of Weyburn, Sask., who proceeded west with them right through to Victoria, B.C., which was reached Oct. 10. The principal operating officers accompanied the party within their respective jurisdictions. At Vancouver on Oct. 9 the President and other directors met the Minister of Railways, Hon. J. D. Reid, who accompanied them to Victoria, and also returned east with them. They also met the Minister of Public Works, Hon. F. B. Carvell, who accompanied them on their inspections in Victoria, Vancouver and New Westminster.

At Victoria, the president and other directors met the British Columbia Premier and other ministers, and discussed various matters affecting the interests of the railway and its relations with British Columbia, particularly in respect to the continuation of the line from Victoria to the Nitinat district. The party were taken over the terminal area at the Songhees Reserve, the harbor property, etc., by the mayor, who presented the city's point of view. Subsequently they met a delegation of the Victoria Board of Trade, and discussed the work necessary for the development of the trade of the port.

After hearing remarks by a number of members of the Victoria Board of Trade, the Minister of Railways said, as reported in the local papers, that he was glad to be able to assure the people of Victoria that within a few months 100 miles of the C.N.R. will be in operation on Vancouver Island. Now that the people of the country own the line, it has to be remembered that everything the people do themselves to popularize it will not only benefit the system itself, but it will also tend towards the development of the country. And no province has a better chance than British Columbia, with her mineral, forest and agricultural wealth, and her great seaboard. The minister referred at some length to the development of the port of Victoria, the necessities of which he had not fully understood prior to his visit. He thought that Victoria's position in relation to her possibilities of transportation had changed with the taking over by the government of the C.N.R. system. With docks and warehouses already established for public use, he had, and would continue, to urge upon the Minister of Public Works, the advisability of permitting them to form part and parcel of the C.N.R. system, instead of placing them within the control of the Public Works Department. He was amazed at the representations made in relation to the quantity of freight handled at the outer wharf, and the fact that an average of 30,000 tons required handling yearly, without solicitation of any kind, suggested the possibilities offered by a well organized Oriental campaign. He and the President and directors of the C.N.R. would return east fully seized with the

idea that Victoria as a great port should be placed in the best possible position so far as the C.N.R. is concerned.

D. B. Hanna is reported to have stated, in the course of his remarks, that it would be the directors' object to aim at a large gross revenue, with a minimum of expenditure, so that it could be shown to the people of Canada that government ownership could be made to pay. After reviewing some points in the history of the line, he said that at the end of 20 years there were on the system some 800 locomotives and 32,000 cars, and that a substantial financial appropriation had already been voted for the provision of the additional urgently needed rolling stock. With that in mind, and with the plans that were assuming shape for the procuring of business, he could safely predict that development would commence right on Vancouver Island and in the City of Vancouver and proceed eastward and not stop until it reached the Atlantic Coast. He had seen the system grow from some 100 miles of line to nearly 10,000 miles. Some of the mileage built might not have been justifiable at the time, simply because the old management was not in a position to procure sufficient rolling stock. His judgment, based on over 20 years of experience with the company, was that, under normal conditions, the C.N.R. would most certainly be a really live asset and not a liability. His expectations in this regard were, of course, based on the road being managed on business principles and free from political interference. He was glad to be able to say that there was every indication that the board would have perfect freedom of action. The people could make or unmake the C.N.R. system, and he looked to them confidently for reasonable support. One of the company's best assets is the esprit de corps among all ranks of the service and the thorough feeling of loyalty to the system which prevails.

At Vancouver, the party visited the terminal works at False Creek, and the harbor facilities generally, and then went on to New Westminster and Port Mann.

The Minister of Railways is reported to have said, in speaking at Vancouver, now that the Canadian Northern Ry. has become the property of the people Canada, it is the government's duty to operate it in the interests of the people and not in the interests of any contractors. There is work to do in Canada for the whole system of Canadian Government Railways, now totalling about 14,000 miles. There are terminal facilities at Halifax and St. John, N.B., capable of handling the traffic, not only of the C.N.R., but of all the railways in Canada, or any transoceanic traffic that could possibly be required. The C.N.R. would prove of great value to British Columbia, but this could only come to pass if it had facilities at Vancouver twice as good as those of the C.P.R. He had found since coming to Vancouver, that though the people owned a railway and the government had built an elevator on Burrard Inlet, wheat could not be got to the elevator without paying heavy tolls for shunting cars, to the C.P.R. and to the Great Northern Ry. That is an obstacle to the development of trade, and as soon as he returned to Ottawa it would be removed. He wanted to see as much of the wheat as possible, if not the whole of the wheat for export from Alberta, going through this elevator, and then going by the

Panama Canal to Liverpool or across the Pacific to the Orient. There must be a large fleet provided to ply on the Pacific as well as on the Atlantic Ocean, to connect with the government railways. With respect to the traffic between Vancouver and Victoria, a car ferry is on its way from the Atlantic seaboard, and is expected to arrive at an early date. Its capacity is 21 cars, and it will be able to handle all the traffic that may offer.

At North Vancouver, the party were received by the mayor and shown round. Mr. Hanna is reported to have said:—"There is no obstacle to putting on a car ferry between the government wharf on the Vancouver side and North Vancouver," the meaning of which, according to a local report, is that if such an improvement be effected, track connections would be made between the C.N.R. False Creek terminals and the government wharf. The mayor promised to send all data in regard to the matter to the company's offices in Toronto for the directors' consideration.

On the return trip eastward, the party left Vancouver Oct. 13 and stopped off at Kamloops, where they looked over the terminals, with a view of extending the line from the junction into the town, which will probably be done in the near future. Edmonton was reached Oct. 15, and after spending a day there they left for Calgary, and afterwards stopped over at Drumheller, Alta., where 18 coal mines are producing from 3,500 to 4,500 tons of high grade lignite a day, with the expectation of substantially increasing this next year. From Drumheller they went via Saskatoon to Winnipeg, arriving there Oct. 17. At Winnipeg the Minister of Railways and the directors visited the C.N.R. shops at Fort Rouge, also the Canadian Government Railways shops at Transcona, with a view to co-ordination of work in the event of the amalgamation of the Canadian Northern and the Canadian Government Railways. Messrs. Riley and Hamilton left the party at Winnipeg, and after spending three days there, the Minister of Railways and Messrs. Hanna, Hobson and Ormsby started east, making a short stop at Port Arthur, and reaching Toronto Oct. 22.

### Sea Wall, Canadian Northern Terminals Etc. at Vancouver.

The Minister of Public Works, Hon. F. B. Carvell, was in Vancouver, Oct. 9, where he conferred with the mayor and representatives of the city council upon harbor development matters. One of the places visited was the sea wall at False Creek, work on which has been stopped pending settlement of certain matters with Champion & White, who claim its erection will prevent their making use of their wharf. The city claims that it has a crown grant prior to Champion & White and that the firm had never been authorized to build a wharf. All the facts in connection with the matter were laid before the minister, who stated that the erection of the sea wall would have to be proceeded with. He was shown the site of the proposed deep sea terminals at the Kitsilano reserve, and the route of the line connecting them with the Canadian Northern Ry. at False Creek, and the layout of the proposed docks at English Bay, and he is reported to have said on his return to the city that deep sea terminals are a logical necessity for the C.N.R.

## Railway and Other Lockouts and Strikes Prohibited by Order in Council.

The following order in council has been passed by the Dominion Government:

Whereas the Minister of Labor represents that under the provisions of the Industrial Disputes Investigation Act and amendments thereto, provision is made for the establishment of conciliation boards for the adjustment of disputes between employers and employees in the manner in said act and amendments thereto provided;

That by order in council P.C. 1743 of July 12, 1918, provision is made for a board of appeal to which resort may be had when any party interested feels aggrieved by the decision of any such board of conciliation;

That there has been constituted by the Canadian Railway War Board, with assent of representatives of the organized bodies of railway employees, a board of adjusters for the settlement of disputes that may arise between the employees engaged in railway work and their employers;

That by these different dispositions full and adequate provision is made for the just and equitable settlement and adjustment of all matters of dispute that may arise between the employers and employees in the different industries affected by the Industrial Disputes Investigation Act and its amendments, or between employers and employees in connection with the carrying on of the operations of railways in Canada, but no provision is made for enforcement of obedience to and compliance with the orders or decisions of such boards, nor is there any prohibition of strikes or lockouts, after report has been made by a board of conciliation;

That in view of the provisions so made and of the injurious and detrimental effects resulting from the occurrence of strikes and lockouts in the different industries affected by the Industrial Disputes Investigation Act and in connection with the operation of the railways, which strikes or lockouts are of a nature to seriously interfere with the carrying on of said industries and the operation of the said railways, both of which are essential to the efficient performance of Canada's duty in aiding in the effective prosecution of the present war, it is necessary and advisable that under the powers conferred upon the Governor in council by the War Measures Act of 1914, such strikes and lockouts in connection with such industries or railway operations should be absolutely prohibited during the continuance of the present war;

Therefore, His Excellency the Governor General in council, on the recommendation of the Minister of Labor, and under the provisions of the War Measures Act, 1914, is pleased to make the following regulations, and the same are hereby made and enacted accordingly:—

1. In the present regulations, the word "person" wherever used, shall, save where the context otherwise requires, include every company, firm, partnership or other association of persons incorporated or unincorporated;

2. Any person who during the continuance of the present war shall incite, order or participate in a lockout or strike as defined in the said Industrial Disputes Investigation Act and amendments thereto, in any industry mentioned therein or to which the said act is applicable either in virtue of its terms, or of any act of

fore, during or after an investigation by a board of conciliation established under the said act or amendments, or by a board of appeal or the board of adjusters above mentioned, shall be guilty of an offence punishable as hereinafter provided.

3. Any employer of labor shall be guilty of an offence and liable to the penalties hereinafter provided who, during the continuance of the present war, shall discharge or refuse to employ workers (other than those holding positions or employment which shall be by judgment of the board of appeal or the board of adjusters above mentioned, determined to be incompatible with membership in a union) merely by reason of membership in trades unions or for legitimate trade union activities outside of working hours.

4. Every worker shall be guilty of an offence, and liable to the penalties as hereinafter prescribed who in the exercise of his right to organize uses either coercion or intimidation of any kind to influence any person to join his organization.

5. Every decision or order of any board of conciliation shall, if unappealed from within 30 days after it is rendered or made, and every decision or order of the board of appeal or board of adjusters parliament or order in council amending the same, or in connection with the operation of any railway in Canada, be above mentioned, shall be binding upon all persons affected thereby and any person who during the continuance of the present war fails or refuses to comply with any such order or decision of any board of conciliation or of the board of appeal or board of adjusters above mentioned shall be guilty of an offence and liable to the penalties hereinafter prescribed.

6. Any person violating any of the foregoing regulations shall be liable upon summary conviction to a penalty not exceeding \$1,000, or to imprisonment for a period not exceeding 6 months, or to both fine and imprisonment.

7. (a) Any male person, employer or employee, of military age as defined by the Military Service Act, who violates any of the hereinabove enacted regulations, and any director of such military age of any company who acquiesces in the violation of the said company of any of said regulations, shall inso facto be deemed to be a soldier enlisted in the military forces of Canada and subject to military law for the duration of the present war and of demobilization thereafter and shall forfeit any exemption granted to him and any right to apply for or obtain any exemption from military service under the Military Service Act.

(b) In any prosecution for acquiescence on the part of a director of any company in a violation by the said company of any of the present regulations, it shall be upon the party charged to prove non-acquiescence by him in such violation.

The Regina Municipal Ry. has posted the following notice in its cars:—"Please deposit your own fare. When you give the conductor a larger coin than 5c he will give you the full change or tickets. Then drop the exact fare in the box yourself. Don't carry money or tickets in your mouth. It is very unsanitary."

## Rates of Pay for Minor Supervisory Officers on Railways.

The Canadian Railway War Board issued the following circular Oct. 17 to railways operating in Canada:—

The board having been requested to advise the railways in the establishment of increased rates of pay for minor supervisory officers, and enquiry and investigation having been made in both Canada and the United States, it is suggested that the following be used as a basis in computing rates for the position mentioned:

**Assistant Yardmasters.**—Minimum \$175, maximum \$240, a month.

**Yardmasters.**—Minimum \$200, maximum \$250, a month.

**Assistant General Yardmasters.**—Minimum \$235, maximum \$260, a month.

**General Yardmasters.**—Minimum \$250, maximum \$285, a month.

It is the intention that yards will be classified as "Number 1, 2 and 3," and rates applied in accordance with such classification, subject to the minima and maxima indicated. Classification of the yards and rates to be paid, subject to the foregoing, is left to the judgment of the individual railway managements. For the four classes of positions mentioned 2 days off, with pay, per month and 2 weeks annual vacation (after one year's service) should be allowed. No limit is placed on the day's work, that is, no overtime is to be paid in addition to the monthly rates shown. The foregoing rates and conditions will not apply where the position is included in agreement between railway and labor organization.

**Assistant Superintendents** who devote their time exclusively to yard terminals shall be paid in accordance with rate quoted for general yardmasters.

**Chief Dispatchers and Night Chief Dispatchers.**—Apply increase of 20% over rates as of July 31, 1918, with a maximum of \$275 a month.

**Trainmasters.**—Apply increase of 20% over rates as of July 31, 1918, with a maximum of \$350 a month and minimum of \$250. To include men designated as assistant superintendents at other than terminals.

**Assistant Trainmasters.**—Apply increase of 20% over rate as of July 31, 1918, with a maximum of \$300 a month and a minimum of \$200.

**Road Foremen of Locomotives, Traveling Engineers and Division Master Mechanics of Superintendent's Division.**—Apply increase of 20% to rates as of July 31, 1918, with a maximum of \$300 and minimum of \$200 a month.

**Assistant Road Foremen of Locomotives and Road Foremen, if employed under supervision of Division Master Mechanic.**—Apply increase of 20% over rates as of July 31, 1918, with a maximum of \$250 and a minimum of \$175 a month.

**Travelling Firemen.**—Apply increase of 20% over rates as of July 31, 1918, with a maximum of \$200 and a minimum of \$150 a month.

**Division Engineers, Engineers, General Roadmasters, Superintendents of Track or Superintendents of Bridges and Buildings.**—Apply increase of 20% over rates as of July 31, 1918, with a maximum of \$350 and minimum of \$250 a month.

**Resident Engineers, Assistant Engineers, Roadmasters, Track Superintendents, Bridge and Building Masters, Supervisors of Bridges and Buildings and Supervisors of Signals or their equivalents.**—Apply increase of 25% over rates as of July 31, 1918, with a maximum of \$225 and minimum of \$150 a month.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates.

**British Columbia Electric Ry.**—A conflict has been waged between Vancouver City Council and the B.C.E.R. over the 6c fare. The city applied for an interim injunction to restrain the company from charging the fare, but the court refused the injunction and the case will come before the court in the usual way. The city council on July 8 granted the company the right to charge 6c, the company thereupon paying increased wages and settling the strike. A few weeks later, after the bylaw had been signed by the city clerk, the mayor refused to sign, intimating that he would not sign until the B.C.E.R. reduced its lighting rates. The city council then decided that it had overstepped its powers in granting the higher fare permission, and was informed by the city solicitor that it could not repeal a bylaw that was legally non-existent, but could amend it by putting it to the people by ballot. The company contended that there was a binding contract which had been performed in full by the company. On being submitted to the people on Oct. 5, the bylaw was defeated by 1,311 against and 642 for. Little or no interest was taken in the voting, because the submission of the bylaw was in doubt up to the last moment, owing to the discussion of the proposed new franchise and the proposal to withdraw. A majority of the city council is now said to be in favor of the 6c fare, but could not withdraw from their stand on the necessity of submitting the bylaw.

Following the declaration of the result of the vote, the company issued the following statement:—"We regret that the taxpayers have not confirmed the agreement between the city council and the company. There is no question that the city council on July 8 authorized this company to charge a 6c fare and it was on the strength and good faith of this authorization that the company incurred the heavy increase in expenses in the higher wage of the men and enabled the car service to be resumed. The company fulfilled its part of this contract in every particular. It paid the wages, and to put the question of the 6c fare, on the strength of which the company performed its part, to the taxpayers, was contrary to all business principles. The agreement of July 8, in our opinion, still stands and it is our opinion, having performed our part to the letter, that we have the legal and moral right to collect a 6c fare. We will therefore act in accordance with the agreement and charge 6c on the cars."

Drafts of the proposed franchise have been exchanged by the company and city. The company asked for the present franchise to be changed only as regards the fare. It proposed that the 6c fare be authorized until a public service commission, appointed by the province, should decide otherwise on application of either the city or the company. The city stipulated a 5c fare, complete control of the service and extensions, pavement of whole area of street within the tracks and for 18 in. outside, and the scale of percentages on gross earnings to the city on receipts over \$2,000,000 to be raised to 10%. The rate has been 8% up to \$2,000,000. Discussion over the terms of the franchise is still going on, the city and company being unable to agree on many

points, especially that of the fare to be charged.

The Victoria City Council, on Oct. 17, after several meetings of committees, and of the council, reached something like a basis for a revision of the company's charter. The terms have not been definitely set out, but it is reported that the city will give permission for the increase of fares if the company will grant certain concessions, but that no definite decisions will be reached until after the council has had an opportunity of examining the draft of the new agreement proposed between the company and the City of Vancouver.

A Victoria press dispatch of Oct. 28 says:—"It looks like a peaceful settlement of all the difficulties between the city and the B.C. Electric Ry., as the city council has agreed to 6c fares and made other concessions to the company."

**The British Columbia Electric Ry.** has applied to the Board of Railway Commissioners for authority to advance freight rates on the Vancouver, Fraser Valley & Southern Ry., 25%, on the same basis as steam railways were authorized to do recently by Dominion order in council.

**Fort William Municipal Ry.**—A joint meeting of the Fort William, Ont., Public Utilities Committee, and of the Port Arthur, Ont., Utilities Commission, was held Oct. 8, to consider the rates of fares on the electric lines in the two cities, and the line connecting them, at which it was reported that the Ontario Railway and Municipal Board could not fix a date for the hearing of an application until early in 1919.

**The Hamilton Radial Electric Ry.** operates a line from Hamilton to Oakville, Ont., under franchises granted by the City of Hamilton, the Townships of Saltfleet and Nelson, the Village of Burlington and the Town of Oakville. Owing to the increased cost of labor and materials, the company made application some time ago to the Board of Railway Commissioners for permission to increase its rates, and the board issued an order granting an increase of 15% in the standard maximum freight mileage tariff, 15c a ton increase on coal and an increase in the standard tariff from 2c to 2½c a mile, subject, however, to the limitations created by the Saltfleet, Nelson, Burlington and Oakville franchises. The order was published in Canadian Railway and Marine World for August, pg. 347, and the judgment in the Sept. issue on pg. 400.

On Aug. 17 the company gave notice to all the municipalities interested that as they objected to an increase in fares, it would, on and after Sept. 15, reduce its service to the number of cars each way required by the franchise bylaws, which meant a reduction in the winter service from 19 cars a day in each direction to 6. Subsequently, at the municipalities' request, the company consented to defer putting the reduced schedule in effect until Oct. 1. The matter was considered by the interested municipalities, and as a result a general conference of representatives of Hamilton, Burlington, Oakville, and the two township municipalities was held in Hamilton Sept. 24, at which

it was suggested that the company should further defer putting the reduced schedule in operation for a month. The Burlington Beach Commission on the following day favored an appeal to the Board of Railway Commissioners for the adjustment of the timetable so as to give the greatest convenience, and on Sept. 28, the Hamilton City Council offered the assistance of its legal department in any action that might be taken. A public meeting was held in Burlington, Oct. 1, at which resolutions were passed appealing to the Board of Railway Commissioners for redress. Subsequently the board's Chief Operating Officer, G. Spencer, visited the district, and following this, on Oct. 18, the following telegram was sent to the company:—"Board desires that sufficient of service withdrawn by your changes of timetable, Oct. 1, be restored immediately to adequately take care of traffic. Schedules leaving Burlington at 6, 7 and 8 a.m., and Hamilton, 4.10, 5.10 and 6.10 p.m., with sufficient cars on each schedule, be minimum of service provided until matter can be finally disposed of."

The company resumed the customary hourly service Oct. 7, pending the hearing of the application, which was fixed for Oct. 17, at Toronto. At the hearing, the representatives of the municipalities produced the bylaws and made statements as to traffic conditions. The company admitted that the restricted service proposed by the schedule was inadequate and satisfactory neither to the municipalities nor itself, but that unless relief was given in the way of increased fares it would soon be necessary to suspend operation altogether. The curtailment of the service was made with a view to bringing home to the municipalities the seriousness of the situation. The company pointed out that there appeared to be only three courses open, viz.: (1) an increase of rates sufficient to meet the expenses of operation; (2) to cease operation and to realize on the company's physical property at the present high price of material, or (3) to adopt the service-at-cost method.

The Chief Commissioner advised the parties to get together and to try and reach a settlement. No order was issued, the board taking the matter under advisement, in the hope that it might be settled by negotiation. The company is maintaining its usual hourly service in the meantime.

**Moncton Tramways, Electricity & Gas Co.**—The New Brunswick Public Utilities Commission began hearing this company's application for authority to charge increased fares on its street railway and higher rates for natural gas, at St. John Sept. 25. A few days later negotiations were undertaken to arrive at a settlement, and the sittings were adjourned until Oct. 2, when it was announced that the negotiations had failed, and the commission adjourned the further hearing to Nov. 27.

**Montreal & Southern Counties Ry.**—Canadian Railway and Marine World for September contained copious extracts from the Chief Railway Commissioner's judgment, granting this company's application for increase of freight and passenger rates, to the same extent as permitted by the board in the case of steam

railways. The town of St. Lambert, Que., appealed to the Dominion Privy Council against this judgment, claiming that the Board of Railway Commissioners has no jurisdiction to increase the fares to be charged by the company between Montreal and St. Lambert and vice versa, as the same are governed by a notarial contract entered into Mar. 2, 1909, between the town and the company, which confirmed certain franchises and rights within the town, one of the considerations being the fixing of fares, that the contract cannot be set aside or modified without the consent of both parties thereto, and asking that the Governor General in council rescind the Board of Railway Commissioners' order and that it be declared that the contract be maintained for its full term. The petition came before the Privy Council at Ottawa Oct. 9, when argument on behalf of the parties interested was heard. The Minister of Justice reported, that having perused the petition and the reasons for the Board of Railway Commissioners' judgment, and having heard the arguments of counsel for all parties, he was of the opinion that the petition raised questions of jurisdiction and of law, and that an appeal lies from the board's order to the Supreme Court of Canada, under the Railway Act, R.S.C. 1906, chap. 37, sec. 56, subsections 2 and 3, that in such cases it is desirable that the procedure provided by said subsections should be followed, and he therefore recommended that the petition be not granted. The other members of the Privy Council present concurred in this and the appeal was dismissed. The town of St. Lambert was represented by L. A. David, K.C., and the company by W. C. Chisholm, K.C. Hon. Hugh Guthrie, M.P., W. B. Powell, General Manager, and J. P. Hudson, Accountant.

**The Montreal Tramways Co.** put into operation, on Oct. 3, the new schedule of fares as fixed by the Quebec Public Utilities Commission. Tickets for the new fares were put on sale Sept. 29, at 37 places throughout the territory served, and also by conductors and by inspectors and agents stationed at principal intersections. Unused tickets under the old schedule were redeemed at the company's offices in cash or new tariff tickets. The old blue tickets were not redeemed, it being announced that they would be accepted for fares between 6 and 8 a.m. and 5 and 7 p.m. only.

**Moose Jaw Electric Ry.**—At a meeting of the Moose Jaw, Sask., City Council Oct. 7, when the question of getting the company to repair the South Hill bridge, was under discussion, Alderman Ingram is reported to have said that it was no use the council meeting and passing resolutions and charging things up to the company which would be unable to pay its liabilities; the street railway in Moose Jaw was operating at the same rates as before the war, and he could not understand why people should expect private capital to operate at a loss; the whole thing meant that either the council must meet the company in some way, or there would be no street railway service at all.

**Port Arthur Civic Ry.**—See Fort William Municipal Ry.

**The Toronto Ry.** applied to the Toronto City Board of Control on Oct. 9 for authority to increase its fares, saying among other things:—"We are sincerely anxious to maintain our service, and feel that owing to the prevailing abnormal conditions, we are justified in asking for the co-operation of the city in obtaining a straight 5c fare. We respectfully sub-

mit the payment of a straight 5c fare would be no great hardship to the public, and in our opinion such an increase will enable us to provide a greatly improved service." The Board of Control decided unanimously to refuse to entertain the proposal.

**Windsor, Essex & Lake Shore Rapid Ry.**—A. Eastman, Vice President and General Manager, issued a circular to the company's patrons recently, in which he said:—"On Sept. 1 a new passenger tariff becomes effective. Owing to the tremendous increase in costs of material and labor we cannot continue to operate the railway unless our receipts are materially increased. Under the new tariff the one-way fare remains as previously, on a basis of 2½c a mile. The slight changes in round trip fares have been made to conform with the regular round trip basis as used on steam railways. The increases in special and funeral car movements are necessary in order that this service will not be performed at a loss to the company. The family commutation books have been eliminated, as we find it is impossible to carry passengers at a rate of 1½c a mile. For persons living along our line and whose business is located at another point and who will make a round trip daily, we have placed on sale the individual 54-ride monthly commutation book at a better rate than was given under the family commutation book.

"In order that our patrons may know something of the financial difficulties under which we are trying to operate, I give herewith a statement of our losses from operation this year. Commencing with Jan., 1918, our monthly deficits have been as follows: Jan., \$7,511.99; Feb., \$3,522.27; March, \$152.50; April, \$4,096.01; May, \$5,382.91; June, \$2,968.57; July, \$4,469.43. A total deficit for 7 months of \$28,103.68. This serious loss is accounted for by a general decrease in passenger traffic, owing to border restrictions, the general use of the automobile, general war conditions and a doubled increase in operating expenses.

Our pay roll has almost doubled during the past five years. Our fuel bill has increased from \$700 a month to almost \$2,100 a month at the present time."

After giving particulars of increases in cost of materials, supplies, etc., ranging from 40% to 300%, the circular continues:—"You will readily see from the above that it is impossible to continue to operate at the same rate of fares as has been charged during the past 10 years. At present our average earnings per passenger is 22½c each. We had hoped the summer season would bring with it the usual increase in passenger traffic, but this has not developed to the extent we had expected and we now find it necessary to increase our earnings if we are to continue operations and to maintain track, overhead and equipment. Practically all steam and electric railways both in the United States and Canada have increased passenger and freight rates, in some cases to the extent of 40%. These increases have been approved by the Interstate Commerce Commission or the Board of Railway Commissioners after careful investigations.

"I believe it is admitted that the installation and operation of the W.E. & L.S. Ry. has resulted beneficially to the communities through which it runs, and we appreciate your past patronage and hope during these trying times special consideration will be accorded our efforts to provide a service and every assistance will be given in order that it will not be

necessary to make any further advances in rates in order to continue operation."

**Winnipeg Electric Ry.**—It was stated in Canadian Railway and Marine World for October that the company had advised the city council, Sept. 10, that it was preparing to ask for authority to increase its fare to 7c, with unlimited transfers as at present, or in the alternative for a fare of 6c, with a charge of 1c for transfers. This information was given in a press dispatch from Winnipeg dated Sept. 11, but we were advised on Sept. 28, after our October issue had gone to press, that the report was incorrect.

The company applied to the city council for authority, on Oct. 18, to charge 6c an adult passenger within the city, to sell school children's tickets at 7 for 25c, and to abolish all other fares. For fuller particulars, see "Winnipeg Electric Railway Wages, Revenues, etc., on another page of this issue.

An unconfirmed Winnipeg press dispatch of Oct. 26 says:—"The city council decided this afternoon to put the question of an advance in street railway fares up to the Public Utilities Commission. The 6c fare will likely be recommended. An offer by the company to sell out to the city immediately, for a figure based on the physical valuation of the company, was made to the council."

### Vancouver Jitneymen and the British Columbia Electric Railway.

While a number of jitneymen have been fined in Vancouver police court for minor infractions of the traffic bylaws, the cases against others were adjourned upon the technical point of the summonses having been issued by the city while the temporary injunction affecting the matter was in force. This point was taken into consideration by the police magistrate, who dismissed the cases subsequently on the ground that the informations had been laid in contempt of court.

Owing to the congestion of traffic, it is impossible, it is said, to operate the service without breaking these regulations. When the cases were called on in the police court, Oct. 9, about 80 of them were withdrawn, it being shown that the bylaw provided that the company "shall" do certain things, but that no penalty is provided for if these things are not done. In regard to the remaining nearly twenty cases, it was argued that it was the crews of the cars who should be proceeded against and not the company. The police magistrate adjourned the cases to consider this point.

The Blue Funnel Motor Line on Oct. 3, in conjunction with W. Whalin, who describes himself as pastor of South Hastings Methodist Church, and who operates a jitney, initiated an action in the B.C. Supreme Court, against the city and the B.C.E.R., asking for a declaration that all the anti-jitney legislation is invalid, and for an injunction to prevent the enforcement of the city bylaw prohibiting the operation of jitneys on city streets. The application was dismissed on a technicality Oct. 5. The application was renewed Oct. 9, and finally refused by Judge Morrison, Oct. 15.

The Nova Scotia Public Utilities Commission met at Halifax recently to investigate the condition of service, rolling stock and other equipment of the Nova Scotia Tramways & Power Co.'s electric railway lines in that city, in regard to which complaints had been filed.

## Winnipeg Electric Railway Wages, Revenues, Etc.

The Minister of Labor, on Sept. 13, appointed a board of conciliation and investigation to inquire into matters in dispute between the Winnipeg Electric Ry. and its conductors and motormen, the board consisting of Isaac Pitblado, K.C., representing the company; R. S. Ward, representing the men, and Chief Justice T. G. Mathers as chairman.

It was shown at the meetings that as the result of a board of conciliation which met in May, 1917, the rates of pay for a year from May 1, 1917, to April 30, 1918, were fixed as follows per hour: First 6 months, 28c; second 6 months, 30c; 2nd year, 31c; 3rd year, 33c; thereafter, 36c.

In Feb., 1918, a new agreement was entered into between the company and the men, which provided that if the jitney competition was abolished by Mar. 31, 1918, the following increased rates of wages would be paid from May 1, 1918: First 6 months, 30c; second 6 months, 32c; second year, 33c; third year, 35c; fourth and succeeding years of continuous service, 39c. The jitney competition was eliminated and the new rates went into effect May 1, 1918.

Notwithstanding the agreement, the conductors and motormen's secretary and business agent wrote the company's General Manager Aug. 26, 1918, asking that the following wages be paid on and after Sept. 15: First 3 months, 47c; next 9 months, 55c; thereafter, 60c; overtime to be paid time and a half.

The company's General Manager replied on Aug. 29, that an agreement governing the rates of wages was in existence and would not expire until April 30, 1919, that the wages asked were entirely exorbitant and far exceeding the rates of pay received by men in similar employment and under similar conditions, and that to accede to the demands would be to put the company into immediate insolvency.

On Sept. 3 the men applied for a conciliation board, which was granted by the Minister, as stated above. Following are the principal portions of the board's unanimous report:

"The first question which confronted the board was the existence of the agreement of Feb., 1918. It was felt that no countenance could be given to the idea that employees were at liberty to disregard their solemn engagements, and that where an agreement had been entered into, no board had the right to say that either party should be absolved from its binding effect, however much the conditions may have changed since it was entered into, or either party desired to have it charged. It was pointed out to the men's representatives that both their initial letter to the company's General Manager and the letter to the department, applying for a board, contained an intimation that they would disregard their agreement if their requests were not granted. Mr. Sinclair, on behalf of the men, disclaimed any right to break their agreement. He asserted that they held themselves bound by its terms and that all they meant by their application for a conciliation board and all they asked was an opportunity of showing that, owing to the rapid advance in the cost of living, the present scale of wages was inadequate to supply them with a reasonable living, and that the company ought to substitute for the present rates whatever rates the board should decide to be fair and reasonable. The attitude of the

company's General Manager was that the men were bound by the agreement entered into, but as the Minister had so far acceded to the request of men as to grant a conciliation board, he felt it to be the company's duty to lay its case before the board.

"The men's demands were based solely upon the inadequacy of the present rate of wages, owing to the high cost of living. In support of their demands, the men presented to the board statements showing the Winnipeg prices of the various necessities of life and the great increase which had taken place in such prices in recent years. On behalf of the company, it was pointed out that the present rate of wages paid to motormen and conductors by the company was higher than that paid by any other street railway company in Canada, with the exception of Windsor, Ottawa and Vancouver. The rates paid in other cities were as follows:

	Junior.	Senior.
Montreal	31	37
Toronto	30	37
Hamilton	30	37
Port Arthur	30	37
Fort William	30	36
Hull	29	36
London	30	35
Windsor	36	41
St. John, N.B.	30	36
Ottawa	35	39
Halifax		32½
Vancouver	30	51

"In the case of Ottawa, the rates were established by the unanimous decision of the labor appeal board rendered on Aug. 23, and the St. John rates by the majority report of a conciliation board dated Aug. 6, concurred in by the chairman and the labor representative, the company's nominee vigorously dissenting. In each of these cases the employees were represented by Mr. Sinclair, and the evidence as to the cost of living adduced before these boards was of the same general character as that presented to us. The above mentioned rates of pay have in the great majority of cases been established within the past four months, either by the award of a conciliation board or the agreement of the parties, and it will be noted that with respect to all of them, except in the cases of Windsor and Vancouver, which were affected by exceptional local conditions, the rates are (except in the case of Ottawa) lower than those at present in force in Winnipeg.

"It appears by the evidence before us that the company has paid no dividend to its shareholders since Dec., 1915, and at the present time, notwithstanding the elimination of the jitney competition, the operating expenses and fixed charges of the railway exceed by several thousand dollars per month the railway's actual earnings, and that there is no source of revenue from which increased wages can be paid. The company also furnished us with evidence of the general rate of wages paid in other occupations in the city, and, as to the increased cost of living, relied upon the tabulated statement prepared by the Labor Department published from time to time in the Labor Gazette, and also a statement furnished by the Labor Department as to the increased cost of living in Winnipeg. The employees claim that although the present scale of wages was arrived at by agreement in 1918, the then existence of the jitney competition was a matter considered by them, and that they were induced to enter into the agreement because they believed it was the best they could do under the circumstances, and they claimed the right to go

back to 1913 and take into consideration the enhanced cost of living since that time. The company's representatives, on the other hand, contended that if the 1918 agreement is to be ignored, the starting point for any readjustment of wages should go no further back than the date of the 1917 agreement, and that all the men ought to receive by way of increased wages would be sufficient to take care of the increased cost of living since that date. The board has carefully considered the 1918 agreement and the increased cost of living since its date; the 1917 agreement, and the increased cost of living since its date, and the increased cost of living from 1913 to 1918, and has taken account of all these factors in the recommendation hereinafter contained.

"Further, it appears that in the case of Ottawa Electric Ry. men, the labor appeal board was of opinion that an increase of 9c an hour over the rates existing there in 1916 would be sufficient to take care of the increased cost of living, the resulting scale of wages being: junior men, 35c per hour, and senior men 39c per hour. The cost of living in Ottawa, according to the Labor Department statistics, is about 3 less than in Winnipeg. Formerly there was a much larger difference in the cost of living between Ottawa and Winnipeg, so that the percentage of increase has been greater in Ottawa than in Winnipeg. The Ottawa Electric Ry. employees received an increase of 3c an hour in 1916, whereas from 1913 to 1916 the Winnipeg Electric Ry. men received no advance. In order, therefore, to place the Winnipeg employee upon a level, in so far as increases in wages are concerned, with those in Ottawa, it would be necessary to add 12c an hour to the wages paid in Winnipeg in 1916, which were, per hour: For the 1st 6 months, 25c; for the 2nd 6 months, 27c; for the 2nd year, 28c; for the 3rd year, 31c; for the 4th year and after 34c. If 12c an hour is added to this scale, the result would be 37c, 39c, 40c, 43c and 46c.

"In awarding 9c an hour to the Ottawa employees, the Labor Appeal Board said: 'The board is of opinion...having regard to the increased cost of all commodities, while making allowance for the economies now practised by all, as well as for the substitution of cheaper commodities, that conditions would be fairly met as regards the men by granting motormen and conductors an increase of 9c an hour over existing rates.'

"We have carefully considered the whole situation and have spent several days since the hearing of the parties was concluded in anxious and earnest deliberation with a view of arriving at something upon which we could all agree and at the same time be fair to both the company and the men. Notwithstanding that with its present revenue the company is unable to pay even the present rate of wages, we think its employees should be paid fair living wages and that increase of revenue must be sought for to enable the company to perform this duty towards its employees. In addition to asking for increased wages, the men asked that the period to elapse before the maximum wage is obtainable be reduced. We think that some concession in this regard ought to be granted by the company. Upon a review of the whole situation, our recommendation is that the company put into effect on and from Oct. 1 the following scale of wages per hour: For the 1st

6 months, 39c; for the 2nd 6 months, 41c; for the 2nd year, 44c; for the third and succeeding years of continuous service, 47c. The men also asked that they be paid at time and a half for overtime. We think this is reasonable and should be consented to by the company.

"We recognize the fact that in order that the company may be able to pay these increased wages an increased revenue must be obtained. Bulletin 26, issued by the American Electric Railway Association War Board, Aug. 1, 1918, contains this statement: 'With respect to the relation of the wage increases granted today to the financial conditions of the companies concerned, the arbitrators made the following statement and recommendations in each case: 'This increase in wages will add substantially to the operating costs of the company and will require a reconsideration by the proper regulating authority of the fares which the company is allowed by law to collect from its passengers. . . . This is not a question turning on the history of the relations between the local street railways and the municipalities in which they operate. The just claim for an increase in fares does not rest upon any right to a dividend upon capital long invested in the enterprise. The increase in fare must be given because of the immediate pressure for money receipts now to keep the street railways running so that they may meet the local and national demand for their services. Overcapitalization, corrupt methods, exorbitant dividends in the past, are not relevant to the question of policy in the present exigency. In justice the public should pay an adequate war compensation for a service which cannot be rendered except for war prices. The credit of these companies in floating bonds is gone. Their ability to borrow on short notes is most limited. In the face of added expenses which this and other awards of needed and fair compensation to their employees will involve, such credit will completely disappear. Bankruptcy, receiverships and demoralization, with failure of service, must be the result. Hence our urgent recommendation on this head.'

"We adopt the above quoted extract as our own. The present financial situation of the Winnipeg Electric Ry. Co. is not different from that of a great many other street railway companies in the United States and Canada.

"With respect to the duration of the present agreement, we would recommend that some such provision as is embodied in the report of a conciliation board between the Canadian Northern Express Co. and its employees, published in the Labor Gazette for September should be adopted, and for the reasons stated in that report. We therefore commend to the favorable consideration of the parties the following as an addition to their existing agreement: 'That the new rates of pay shall continue in force until terminated by a 30-day notice by either party, after the conclusion of peace between Great Britain and her present enemy nations, and that until that time there shall be no strike of employees and no lockout by the employer: provided that there shall be a revision of the wage scale at the expiration of every six months hereafter, if it appears that since the last revision of wages there has been a general increase in the cost of living of 10% or more, in which case an increase of wages shall be granted sufficient to absorb such increased cost of living. The cost of living statistics tabulated by the Labor Depart-

ment and published in the Labor Gazette after the expiration of such 6-monthly period shall be accepted as conclusive as to the fact of such increase, if any, and the extent thereof; provided further that should any dispute take place as to the interpretation of the existing rules and regulations, or as to the right of any employee or employees to an increase or the amount thereof, in accordance herewith, or as to carrying out the existing rules, the parties agree to refer the same to the labor appeal board, or to a conciliation board appointed under the Industrial Disputes Investigation Act, 1907, if the employees prefer the decision of such latter board. In the event of an application being made for a board under the said Act, the application may be made by either party, and in such application it shall not be necessary to make the statements required by sub-section 1 (b) of section 15 of the said act, as amended.'

#### The Company's Application for Higher Fares.

On Oct. 18 the company forwarded a petition to the city council over the signatures of Sir Augustus Nanton, Vice President, and Lawrence Palk, Assistant Secretary, in which it said, among other things:—"Since the outbreak of war, operating costs, including labor and material necessary for rendering your petitioner's service to the public, have largely increased; such costs are increasing daily, and it is believed will continue; the amount of the increase which is being experienced generally through all lines of business is such that the prices, rates, fares and charges fixed by custom or law prior to the outbreak of the war are no longer fair, just or reasonable, and such costs are increasing with such rapidity that unless your petitioner is afforded some relief and is permitted to increase its revenue derived from transportation, it will be forced into bankruptcy. By awards of boards of conciliation which have recently been sitting to hear applications for increased wages by some of our employees, the company's pay roll will be increased by \$361,952.42 annually. Increased pay is constantly being asked for in all branches of the company's street railway undertaking. In order to meet increased wages provided for by such awards, other increases which the company has to pay to its employees in other departments and increased cost of material, the total amount of the operating cost of the railway will be increased by \$600,000 annually. Annexed is a financial statement for the period from Jan. 1 to Sept. 1, 1918, which shows a deficit in your petitioner's street railway department of \$21,207.59, after providing for operating costs and fixed charges; and another statement based upon the findings of the boards of conciliation above referred to, and other increases in wages and uncontrollable expenditure, which shows that had the scale of wages recommended by the said boards, and the other increases above referred to, been in effect during the said period, the deficit would have amounted to \$421,207.59 for the eight months, or \$631,811.38 for the financial year ending Dec. 31, 1918.

"It has been repeatedly laid down that it is a duty resting upon the public authorities to secure to the company an adequate rate for the services rendered, which rate should yield sufficient to maintain the service, preserve the property from deterioration, and reward the investors with a fair return upon their outlay, and that the public has no right to be carried at less than cost. Your peti-

tioner proposes that it should be allowed to charge 6c a passenger for the carriage of adult passengers within the City of Winnipeg, and school children's tickets at the rate of 7 for 25c, and that all other fares be abolished."

As a meeting of the city council held Oct. 18 was a special one for the purpose of passing accounts, the company's application was not dealt with, and on Oct. 19 the company issued the following statement:—"Since sending our petition to the city council yesterday, we have heard nothing from them. Pressure is being brought to bear on us by our bankers, who have refused to allow us to increase our debt to them, and who say they will no longer carry us with this great increase of \$50,000 a month facing us. On the other hand, the motormen and conductors are demanding that an immediate decision be given them, and the increased wages put in effect. The company should have an immediate decision from the city council, and if a special meeting is not called to deal with our petition, we will ask them to call one as soon as possible, as the situation is a serious one."

It was reported, Oct. 23, that the men accepted the board of conciliation award, while the company stated it would be forced to refuse it, unless the city council would grant immediate relief by allowing the higher rate of fare asked.

Winnipeg, Oct. 29.—Members of the street railway union declared today that they will go on strike unless they receive the increase in wages granted them by the board of conciliation. The board made the award retroactive as from Oct. 1. The company contends that the increase cannot be paid until the privilege of advancing car fares is granted by the city council.

Winnipeg, Oct. 30.—The Winnipeg Electric Ry. will be permitted by the city temporarily to charge a flat 5c fare, except for children's and workmen's tickets, which will be sold at 8 and 6 for 25c respectively. An exhaustive investigation of the company's business is to be made by the Public Utilities Commissioner to establish whether the increased rates are to be permanent. The city's action will avert the threatened strike of motormen and conductors, set for Friday.

Ottawa Car Stops.—The Ottawa Board of Police Commissioners issued the following statement Oct. 4: "In view of the representations made to this board by the Ottawa Electric Ry., that by the terms of the contract between the city and the company, the company is required to stop their cars over the last crossing of street intersections, and that the company is willing to make the desired change if requested so to do by the city council, the board decided to suspend the operation of the bylaw in the meantime, in order that the company may obtain the consent of the city council to the change recommended by the board."

The Hydro Electric Power Commission for Ontario has ordered a no. 2, double end, double track snow plough, equipped with flanges for right or left hand running, from Canadian Car & Foundry Co., for delivery early in December. The plough will have a clearance height of 15 ft., and is being built at the company's Amherst, N.S., works.

The Pictou County Electric Ry. was reported recently as contemplating closing down its electric railway in Nova Scotia, owing to shortage of fuel for its power plant.

# Electric Railways' Service-at-Cost Campaign for Ontario.

Herman H. Pitts, of Ottawa, one of the Toronto Ry. directors, has, as Secretary of the Association of Holders of Public Utility Securities, issued the following circular to shareholders of the Toronto Ry. and other electric railways in Ontario:—

"In view of the increasing difficulty of financing street railways in Ontario and of giving the public adequate service, and also in view of the expiring franchises bringing the whole subject of urban transportation before the public for immediate action, it has been decided to form an association of Ontario Public Utility Security Holders. The object of the association is to interest all bond and stock holders in a campaign of publicity as to the actual conditions prevailing and to promote a plan to meet the emergency. The co-operative scheme, or as it is usually called, 'Service-at-cost,' has proved to have in it the remedy. It is fair and equitable to all parties. It gives all the advantages of public ownership while eliminating all the defects. It guarantees the shareholders a fixed rate of interest, provides for necessary improvements and extensions and offers efficient and economical management.

"Under separate wrapper will be found a number of copies of a brief summary of the plan. Your assistance would be appreciated in securing as many as possible of the officials of your financial institutions, business men, and all persons holding shares or bonds of any public utility, as members of this association, and as endorsing the service-at-cost plan as set forth in the summary sent you. It is therefore suggested that if you approve of the policy in view by this association that you should sign yourself and have signed by other holders of public utility securities the enclosed list of membership. This is done for the purpose of grouping together the thousands of such securities who are now represented by a comparatively small number of companies, but who count in the thousands, and whose moral support and personal sympathy and propaganda are of paramount usefulness in an educational campaign of such magnitude and importance. When signed, please return the lists to me."

The form which recipients of the circular are asked to sign is headed:—"We, the undersigned, are in full sympathy with the Association of Holders of Public Utility Securities, more especially with its object of promoting service at cost, through a wide educational campaign, whereby the public may be impressed with the advantages of this system or of any other modern and progressive policy of co-operation between the public utility owners and the public they serve. It is understood that no financial obligation in any way attaches to my membership in this association."

The following printed matter was enclosed with the circular:—

## How Will Service-at-Cost Affect Street Railways?

Investors in public utility securities in Ontario are facing a very grave situation, due to the abnormal conditions created by the war, and other causes. Especially is this felt by shareholders in street railway companies, who see their securities dropping in value, and the cost of operating the roads steadily increasing, while the revenue remains practically station-

ary. Expiring franchises in nearly every city, and a propaganda for municipal ownership, bring the question forward for immediate solution. In this connection Canada is no different from the United States, where for several years the street railway situation has been acute, and war conditions have made it obligatory in many cases for state legislatures to step in and pass special legislation to enable the companies to increase their fares, and thus prevent insolvency, and a complete collapse of the systems.

Probably no state in the Union was more affected than that of Massachusetts, where the electric railway systems were in such a desperate condition that state remedy had to be applied at once. A special commission was appointed by the commonwealth to make a thorough investigation on the problems relating to street railways, and after a most exhaustive inquiry into facts, and investigation of all the details of operation and management, the commission made a full report on Feb. 1, 1918, recommending the adoption of a co-operative plan, which it designated service-at-cost. As their conditions were so similar to those in Ontario, and their recommendations so well adapted to the needs of the times here, they are worthy of special consideration. The commission sets forth its findings as follows:

1. The establishment of a sliding scale of fares, so arranged that when the schedule of fares in operation does not yield a revenue sufficient to pay the cost of the service the next higher schedule of fares shall become effective, and so that when the fares yield a revenue greater than the cost of service a corresponding decrease in the rate of fares shall be made.

2. The creation of a reserve fund, which shall be raised by each street railway accepting this plan, and which shall serve as a balance wheel on the system, so that a rapid fluctuation of fares, due to seasonal or other conditions, may be eliminated.

3. The establishment of a depreciation and maintenance fund, so that the street railway properties shall be kept up at all times to the proper operating efficiency, and so that new and improved types of equipment may be purchased as the art of street railroading advances.

4. Provision for the rehabilitation, extension, and improvement of lines during a period of years following the acceptance of this plan.

5. A director to be appointed by the Governor of Massachusetts to the board of directors of each street railway operating under this plan.

6. Supervision of the street railways accepting this plan by district representatives, appointed by the Governor or by the Public Service Commission; these local supervisors to report to the Public Service Commission or to a special department thereof; the expenses of such supervision to be borne by the street railway companies but in no case to exceed a certain fixed percentage of the operating expenses of the individual companies.

7. Provision for arbitration proceedings relative to certain conditions which might arise.

8. Provision whereby the state, or any political subdivision thereof, may purchase the entire property of a company, accepting this plan at its determined investment value, or under any other pro-

vision of existing or future statutes.

9. A return to the investors of 6% a year on a fixed investment value, the amount of such investment value to be determined by the Public Service Commission, and to include such sums as have been prudently and honestly invested and conserved with proper diligence, due consideration being given to the present physical condition of the property; the investment value from time to time to be increased by such sums as the Public Service Commission shall certify have been prudently spent and are properly chargeable to capital.

10. The acceptance of such a plan to be optional with the individual companies.

11. Legislation allowing the Boston Elevated Ry. (including its leased lines) to accept this plan.

12. In case the service-at-cost plan is accepted by any street railway company, such funds as the Public Service Commission shall consider necessary for the establishment of the reserve, depreciation, and rehabilitation funds, or for improvements immediately necessary shall be raised by an issue of capital stock, either preferred or common.

## How Service-at-Cost Has Benefited the Cities Where Adopted.

Every city adopting service-at-cost sends the same answer; i.e., that it has established the value of tramway securities, and the credit of tramway companies, making it possible for the companies to rehabilitate their roads, make needed extensions, and give a more satisfactory service. It has furnished the public with what they have been demanding, and they have only had to pay for the actual service they have received. It has given the public control of their street railway systems just as fully as if they had been municipalized. It has given experienced management, and transportation at actual cost, and at the same time doing away with long-term franchises, thus making it possible for the municipalities to purchase the entire system without any delay, and at a fair value, at any time they feel so disposed.

It is difficult to conceive of more bitter opposition than existed against the tramway companies a few years ago in those United States cities now under the service-at-cost system. This hostility has been entirely changed, and the public now feel the railways are being run in their interest to supply their needs.

In Massachusetts several acts were passed this year, embodying the principles set forth in the Public Service Commission report. The railways at once came under the acts, and have already secured the confidence of those they serve.

It is quite evident something must be done at once in Canada to relieve the intolerable situation, caused mainly by the war. Service-at-cost is commended to your careful study and endorsement, as the solution. It is the only scheme so far presented that deals fairly, honorably, and reasonably with all parties. It has had the hearty endorsement of the press, boards of trade, municipal councils, and other public bodies in the United States. It is making good. In operation it has been accepted with satisfaction by all concerned.

Ernest P. Fredericks, who had charge of the service-at-cost campaign in Massachusetts, as Publicity Manager for the

Association of Owners of Massachusetts Street Railway Securities, has been engaged to take charge of the Ontario campaign and has opened an office in Toronto.

### The Winnipeg Electric Railway's Management.

The Winnipeg Free Press of Oct. 2 said:—"It is just twelve months ago since A. W. McLimont assumed the office of General Manager of the Winnipeg Electric Ry. Under his administration good progress has been made towards improving the street car service of Winnipeg, and to this end he has built up an organization which has for its one purpose the supplying of a service equal to the demands of the public. The year of administration is featured not only with improved car service, but also improved public relations, there being a more cordial feeling between the company and the public authorities today than has been the case in the past. This is due in large measure to the new organization, which is imbued with the desire to co-operate with the public.

"In addition to introducing a number of innovations, such as reconstruction of rolling stock, and the provision of trailers, Mr. McLimont is making the utmost effort to bring the service up to the maximum efficiency. During the past year he has co-operated with the city parks board, with a view to popularizing the city parks, and it is stated that as a direct result of his policy more Winnipeg people flocked to the parks for recreation and health giving exercises this year than has been the case ever before. The opening of River Park is but a part of the programme Mr. McLimont hopes to carry into effect in this regard next summer."

### Electric Railway Projects, Construction, Betterments, Etc.

**Brantford Municipal Ry.**—At the Brantford, Ont., City Council's meeting, Oct. 15, notice was given of the introduction of a bylaw to provide for raising \$100,000 by debentures to extend the street railway tracks in the Terrace Hill district, the bylaw to be submitted for the ratepayers' approval at the municipal elections Jan. 1. The estimated cost of the proposed extension is \$28,000 a mile, exclusive of equipment. The exact route has not been finally determined.

**British Columbia Electric Ry.**—The Vancouver City Council is reported to have granted a permit for considerable alterations and some new construction at the company's station on Carroll St. The estimated cost of the work is \$5,000.

**Moose Jaw Electric Ry.**—At a meeting of the Moose Jaw, Sask., City Council, Oct. 7, a letter was read from A. H. Dion, Superintendent, Moose Jaw Electric Ry., stating that the question of repairs to the South Hill bridge would be considered by the directors at an early date. Several suggestions were made in regard to the matter, and it was agreed to call a special meeting to consider the whole question. Several of the aldermen expressed the opinion that the city might repair the bridge to make it safe for traffic, while others contended that the only solution of the difficulty was to make a new contract with the company. (Aug., pg. 348.)

**Regina Municipal Ry.**—Commissioner Thornton is reported to have informed the Regina, Sask., City Council, Oct. 1, that

the cost of maintenance and upkeep of the overhead system of the municipal railway for the first eight months of this year was \$1,835.09, against \$1,747.27 for the same period of 1917, and \$1,199.29 for the same period of 1916. The amount spent for material during this year was

10% less, and cost of labor was 10% more than for 1917. (July, pg. 308.)

**Toronto & York Radial Ry.**—We are officially advised that the company is contemplating building a small car barn for its Scarborough division, in the Scarborough Tp. (Jan., pg. 32.)

## The Regina Municipal Railway Investigation.

Judge Hannon, who completed hearing evidence into conditions on the Regina Municipal Ry., at Regina, Sask., Sept. 16, presented his report to the city council Oct. 15. The extent and scope of the investigation were given in detail in Canadian Railway and Marine World for July, pg. 305. All the evidence available was secured prior to the close of the investigation, the only other possible witness, Dr. Rose, being overseas. In his report Judge Hannon refers to the fact that an effort was being made to get the evidence of this witness, and states "when that has been laid before me, I shall forward it to you with such further comment as is necessary."

The report, a lengthy one, deals in detail with the ten questions submitted for consideration. A summary of the answers to these questions shows that while there were three sources of suspicion, there was no evidence to show that tickets were improperly used; that there had been no gross carelessness in the handling of tickets, and that if there was any illegitimate use of tickets at all, it must have been of the smallest and most limited proportions. So far as the system of accounting is concerned, the finding is that it was put in force by the City Treasurer's department, from which a slight variation was made in 1915. Since the beginning of this year, certain changes had been made in the method of dealing with the apportionment of the contents of fare boxes where a car is being transferred from one run to another without the fare box being changed, and also in regard to the burning of tickets daily instead of three times a week. The report says that mechanical and traffic conditions are highly satisfactory, especially in comparison with systems of corresponding size, and particularly with reference to the basic conditions under which the Regina Municipal Ry. is operated; additional car barn accommodation, especially for repairs, is desirable, and an auto repair truck for overhead work might be usefully employed, but present financial conditions are not favorable to providing them. The stationing of inspectors at central points would require the employment of more inspectors. The management agreed that the suggestion of having inspectors more accessible than at present is both feasible and desirable, and the judge expressed the hope that it would not escape their attention when financial conditions were more favorable. A point not covered by the question submitted had to do with the fact that there is no service direct to the front of the union station, and Judge Hannon said the matter should be closely watched with a view to arranging for such a service.

There is not the faintest hint, says Judge Hannon, of the lessening to any appreciable extent of the efficient operation of the system by the attitude of the management to the men, nor is there a lack of co-operation or a spirit of disloyalty on the part of the men, engendered by lack of confidence on the part of the council or the public or otherwise

to the management. In detail, the judge paid a very high tribute to the whole body of employees, and added: "Such men as these, loyally supporting the capable management, will give the best that can be given by the R.M. Ry., and I think the public should know the fact." Judge Hannon pays a special tribute to Superintendent Houston and Commissioner Thornton. Of the former he says: "From what I saw of him, and more particularly from what I gathered from the stories of his men, and from the evidence as a whole, I came to the conclusion that he is a very competent, careful, well-balanced, prudent and just manager, and I believe that the longer he remains in control the greater will be the trust and confidence reposed in him by his men and the citizens of Regina." In regard to Commissioner Thornton, the judge says: "The city possesses in him an invaluable man, of the purest motives and the highest qualities, who is rendering daily a quality of service for which he can never be adequately recompensed."

The judge points out that the situation offers an opportunity for a man who would appear great in the eyes of the ratepayers to start out and abuse everything about the line, and adds that if any of Regina's public men took this course and made the railway the football of municipal politics, they would be doing it all the harm they could possibly do.

No officer, servant or employee of the street railway, or anyone connected in any way therewith, has been guilty of dishonesty, negligence or incompetence in the discharge of his duties.

It was intended that expert evidence was to have been given, but this was not available, beyond what came from employees of the department. The judge expresses the opinion that upon the evidence laid before him a very excellent showing was made under very difficult circumstances in the effort to get the very largest revenue consistent with giving satisfactory service. As to possible improvements, he had no doubt such questions as one-man cars, skip stops, higher rates, etc., were under the careful consideration of the management and of the council.

In conclusion, he said: "There are numerous sources of legitimate pride in this utility. There is a good overhead system, well maintained; there is an excellent roadbed of superior construction; there is a good car equipment; there is an excellent, eminently trustworthy, capable management; there is a splendid body of employees in adverse conditions, a very fine and increasing profit over operating expenses, and, added at the same time a very reasonably satisfactory service has been maintained. The individual citizen, if he thinks along that way, will think of other streets. Let us take a pride in our own street railway."

The Regina City Council, through the reported to have agreed to appoint a retired soldier, who has been an anti-organizer.

## The Ottawa Electric Railway's Franchise.

T. Ahearn, President, is reported as having said in a recent interview: "The company has taken the position that with the franchise expiring in 1923, it is not reasonable that we should, at this late date, be expected to make further extensions which would entail large capital expenditure. We have before stated that if the corporation wants further extensions, it should, as early as possible, determine the policy that will be finally adopted in dealing with the street railway question. But if this determination is left until the expiration of the franchise, the company would not be warranted in making extensions then any more than today, because the Railway Act provides that if the City of Ottawa does not acquire the physical assets of the railway, as provided in the contract, the franchise will automatically continue for a further period of 5 years. So that, at present the company has five years franchise in sight, which, as I have stated, does not warrant us in making any large capital expenditure, and at the expiration of the franchise if the city does not take the property over, a further term of five years will be in sight, which in turn will not warrant any large capital expenditure. It is obvious therefore to any reasonable person that the city should determine what it is going to do, rather than permit the situation to drag along, approximating a stalemate. The company's object in suggesting the appointment of a committee was to provide the city council with a practical suggestion that would enable it to get somewhere, but as I said before, with the municipal elections near, there will be nothing doing."

**Working Men's and Women's Tickets in Quebec.**—The question of what is a "workman," who is entitled to travel on an electric railway on a reduced fare, where such is in force? has been raised in the City of Quebec. The Quebec Civil Code says: "The word 'workman' means artizan and all those in general who earn their living by manual labor." This is the meaning which the Quebec Ry., Light & Power Co. put on the term when it granted a reduced fare for workers' tickets for men. The city council having specially requested that these tickets be sold to women as well as men, the company complied, but it limits them to what it considers bona fide working women, and does not include clerks in stores, banks, etc., stenographers, typewriters, saleswomen, etc. The company is said to be considering cancelling the privilege given to working women, as it is being abused, practically all females wanting to use the tickets between 6 and 8 a.m. and 5 and 7 p.m. on week days. The original reason for giving a special workmen's rate was for the purpose of creating travel at times when there was practically no other business, and when such traffic could be confined to a few special routes. These considerations do not prevail to the same extent as they did 20 or more years ago.

Owing to the epidemic of Spanish influenza, street car service in every city in Canada has been affected. In Regina and Moose Jaw, Sask., and Calgary, Alta., the service was entirely suspended on Sunday, Oct. 20.

Toronto Ry. had 1,284 employees at the end of September, against 1,635 at the same period of 1917.

## Mainly About Electric Railway People.

F. M. Shaw, of the accountant's department, Moncton Tramways, Electricity & Gas Co., died at Moncton, N.B., Oct. 15 from pneumonia.

G. Gordon Gale, Vice President & General Manager, Hull Electric Co., has recovered from an attack of pneumonia. One of his brothers died of double pneumonia in Quebec, Oct. 23.

T. L. Robinson, who was in charge of the remodelling of the cars and trucks of the Winnipeg Electric Ry., and prior to that was in McGuire-Cummings Mfg. Co.'s service in Chicago, Ill., died in Winnipeg recently from influenza.

H. C. Foss, a former Manager of the Cape Breton Electric Co., Sydney, N.S., and latterly acting Manager, Savannah

A. Gaboury.

Superintendent, Montreal Tramways Company, and Vice President, Canadian Electric Railway Association.

Electric Co., Savannah, Ga., has been appointed acting District Manager, South-eastern District, Stone and Webster Corporation.

W. H. Moore, who resigned the secretaryship of the Canadian Northern Ry. recently, as stated in Canadian Railway and Marine World for October, continues as General Manager, Toronto & York Radial Ry. He has removed his office from the C.N.R. Building, Toronto St., to the Mackenzie-Mann new offices, 43 Victoria St.

A. C. Johnstone, accountant, Chatham, Wallaceburg & Lake Erie Ry., died at Chatham, Ont., from pneumonia, Oct. 5. He was born at Edinburgh, Scotland, in 1875, and first entered railway service in Winnipeg, as office boy to D. B. Hanna, now President, Canadian Northern Ry. He was subsequently, for some time, in service in Buffalo, N.Y. In 1913 he entered C.N.R. service at Toronto, and in 1915, transferred to C.W. & L.E.R. service, as accountant at Chatham, Ont.

## Zone Fares for Increased Revenues.

Canadian Railway and Marine World for September contained a suggestion from a correspondent, regarding the adoption of a zone system of fares on electric railways, with the idea of increasing the revenue. This matter was received some time ago, but owing to lack of space it was not published earlier. It is, however, of interest to note that the question of zone fares is being taken up by several companies in the U.S., and permission for its adoption is being sought. Canadian companies are largely restricted in the matter of fares, by agreements with municipalities, under which increased revenue can only be obtained by carrying an increased number of passengers, thus entailing an increased number of cars to operate, with all the attendant expenses. Even if permission be obtained to increase the unit fare, the increase allowed might be by no means sufficient to make up for the extra cost of operation; in fact, it is contended by many that from all points of view, the flat rate fare is entirely wrong in principle, and should be completely wiped out.

The United Railways of St. Louis applied recently to the Missouri Public Service Commission, for permission to make a test of a three zone system with a minimum 5c fare in the central area, as in the company's opinion, a further increase in unit fare would discourage short haul traffic and involve a clumsy fare arrangement, while the zone system as proposed is the fairest and entirely practicable. Some few months ago this railway was authorized to increase the unit fare from 5c to 6c, and a comparison of the receipts for two months ended July 31 this year and last, showed that under the increased unit fare, there was an increase in revenue of 14%, and a decrease in revenue passengers of 4%. On this basis, taking into consideration increases in wages, and operating generally, there will be a considerable deficit for 1918, after allowing 6% on the commission's valuation of the property in St. Louis. It will be noticed that a 20% increase in fare only resulted in a 14% increase in revenue, and it is natural to assume that the decrease in revenue passengers occurred in the short haul traffic, where, undoubtedly, the passenger is penalized. Any further increase in the unit fare would further decrease the short haul traffic.

The zone system suggested by the St. Louis company provides a minimum fare of 5c on the city lines, which form one zone, the other fares being adjusted equitably to provide sufficient revenue, and should it be discovered after experiment that some further adjustment of fares becomes necessary in the second and third zones, this could be carried out without interference with the zones, or the zone limits might be changed without changing the minimum 5c fare. The rates of fare are suggested as follows: In any one zone, including free transfer in that zone, 5c; in two zones, including free transfers in the two zones, the second rate of fare; in three zones, including the entire city, with free transfers to any part of the city, the third rate of fare. The company claims that a practicable scheme can be worked out, and that it has many advantages over the flat rate system, the short riders being taken care of at the minimum fare and the long rider paying for his ride somewhat in proportion to the cost of service provided. It is pointed out that it is difficult to predict the financial result of such a change, as at first it might produce insufficient revenue, or the reverse.

Calgary Municipal Ry.—A press report states that at the end of August the C.M.R. had a surplus on the operations for this year of \$7,284.90, against a deficit of \$19,368.18 for the same period of 1917.

gone up by \$175.93, and average daily fixed charges have been raised by the amount of \$184.08. The total operating expenses show an increase of \$43,552.67 over 1917, while additional in the expenditures are \$10,594 for improvements at Bowness Park and in wages for motormen of passenger and freight cars, and car. house and service employees, there has been a raise of \$40,702 over 1917.

## Cape Breton Electric Co.—

## Montreal & Southern Counties Ry.—

The directors for the current year, elected at the annual meeting recently, are: H. G. Kelley, President; Frank Scott, Vice President and Treasurer; J. E. Dalrymple, Vice President; J. A. Yates, Secretary; W. H. Ardley, Comptroller; W. H. Biggar, General Counsel. W. B. Powell is General Manager.

Montreal Tramways Co.—A press report of Oct. 17, stated notice had been given the Montreal Stock Exchange that the directors had decided to defer the declaration of a dividend for the three months ended Sept. 30, until the new fares had been given time to take proper effect. The declaration of a dividend for the quarter ended June 30 was deferred pending the Quebec Public Utilities Commission's decision as to fares. The new schedules of fares only came into operation Oct. 3, consequently revenues for the quarter ended Sept. 30, were on the same basis as those for the quarter ended June 30.

Oshawa Ry.—The annual meeting was held at Gananoque, Ont., Oct. 4. The officers for the current year are: E. W. Rathbun, President; H. W. Cooper, Manager; J. H. Vallean, Secretary and Treasurer.

Regina Municipal Ry.—The city auditor's report for the 9 months ended Sept. 30, shows that there was a deficit in the operation of the railway of \$42,405.18. The City Treasurer estimated that the total deficit of the railway for the year would be \$46,824.82.

## Toronto Civic Railway.—

The surplus after deduction of fixed charges, for August, was \$15,296.40.

The Hamilton & Dundas Ry. is being sued for damages by the Town of Dundas, Ont. In 1918, owing to some flooding of the line, the company built a new cut from its tracks near Dundas to the Desjardins Canal. The town claims that this deviation of the water to the canal has done serious damage to boat traffic, one boat owner having claimed and received damages from the town. The company moved Sept. 26 to have certain paragraphs in the statement of claim struck out, and certain amendments were made by Judge Gault, Sept. 30. The company was given a reasonable time to file its defence.

The American Electric Railway Association's executive committee decided recently that in view of the conditions prevailing in the industry, necessitating the presence on their property of all electric railway men, the 1918 convention be abandoned. The question of holding a conference of executives, should this be deemed necessary, was left for the executive committee's future consideration.

# Marine Department

## General Shipbuilding Notes Throughout Canada.

G. Beveridge, Central Chebogue, N.S., is stated to be considering building a 100-ton fishing schooner for his own use, and a freight schooner for the local trade.

Omer Blinn, Gross Coques, N.S., has launched the schooner *Mollie* and *Melba*, for J. E. Gaskell, Grand Manan, N.B. Her dimensions are: length over all 155 ft., length of keel 120 ft., beam 34 ft., depth 12½ ft.; 389 tons register. A similar schooner, but of somewhat larger dimensions, is under construction at the yard for F. K. Warren.

Bridgewater Shipbuilding Co., Bridgewater, N.S.—The schooner *Edith Dawson*, named after the daughter of the company's President, was launched Oct. 16. The vessel is three masted, and of the following dimensions: keel 132 ft., beam

powered vessels on the same lines as the *National I*, launched recently.

Esquimalt, B.C.—A press report states that negotiations are in progress for the establishment of a wooden shipbuilding yard to build auxiliary powered schooners, and that Hind Ralph Co., of San Francisco, Cal., is interested in the proposal.

H. T. LeBlanc, Wedgeport, N.S.—The small steamship of the trawler type, which was launched at this yard recently, for J. N. Rafuse & Sons, has been sold to French interests at St. Pierre, Miquelon, for delivery as soon as the machinery is installed. An order has been placed for a similar, but somewhat larger, vessel. Her dimensions will be: keel length 165 ft., breadth 25 ft., depth 13 ft. The pro-

a wharf is to be built in connection with the vessel outfitting plant to be installed there.

The company has, in accordance with subsection 5 of section 15 of the Copyright Act, registered with the Trade and Commerce Department, Ottawa, an interim copyright of the plans for a twin screw cargo steamer.

W. N. MacDonald, Sydney, N.S., has a concrete steamship under construction at North Sydney, and it is expected that it will be ready for launching about Dec. 1. The construction is in accordance with the most modern and approved methods. She is not being built for any special trade, but will probably be used in the coastal trade by the owner and builder, or sent overseas under charter, unless she is sold in the meantime. Her dimensions are: length over all 126 ft., breadth 27 ft., depth 12 ft.; deadweight capacity, estimated 450 to 500 tons. She will probably be equipped with oil burning engines of 150 or 200 h.p. for a speed of 10 knots an hour.

Peter McIntyre, Moss Glen, N.B., launched a three masted schooner recently which is stated to be the first one to be launched on the Kennebecasis River for 27 years, the last one being built and launched by the same man.

Melanson Bros., Gilberts Cove, N.S.—A three masted schooner is expected to be launched at this yard, Nov. 1. It is stated that the vessel, which is approximately 800 tons, is to be named *Melanson Bros*.

Nanaimo, B.C.—It is reported that a company is being organized to establish a shipbuilding yard with three ways, at Nanaimo, B.C. It is stated that a site of about 8 acres is to be acquired, and that it is expected to obtain a contract for the building of 6 steamships from one of the allied governments.

National Shipbuilding Corporation, Three Rivers, Que.—This corporation, which has its headquarters in New York, N.Y., obtained a contract recently for building ten 1,500-ton wooden steam colliers for the French Government, and as the U.S. Government will not allow any vessels of over 1,000 tons to be built in the U.S. for foreign account, the corporation had to secure a Canadian yard, and bought the entire capital stock of the Three Rivers Shipyards, Ltd., which has a plant at Three Rivers, Que., taking over the company's uncompleted contract with the Imperial Munitions Board for wooden cargo steamships for the British Government. The corporation has bought 75 acres of land to add to the 75 included previously in the plant and now has a river frontage of about 1,350 ft. within the city limits. Extensive additions of both buildings and machinery are being made and it is intended to build the 10 French vessels simultaneously. About 800 men are employed and it is expected to increase to about 1,500. For the present, business is being continued under the name of the Three Rivers Shipyards, Ltd., but it is the intention to procure a new incorporation under Canadian law. The principal officials of the National Shipbuilding Corporation in the United States are: Newman Erb, President, Ann Arbor Ry., who is Chairman of the Board; and

British Colonies Transportation Co.'s Auxiliary Powered Schooner *Margaret F. Dick*.

33½ ft., depth of hold 13 ft.; tonnage, 446 net. Another schooner of 300 tons is under construction at the yard, and an additional vessel will be laid almost immediately.

Canadian Car & Foundry Co.—In publishing an illustration of the French mine sweeper *Navarin* in our October issue, she was mentioned as having been built by the Port Arthur Shipbuilding Co., instead of by the Canadian Car & Foundry Co. at Port William, Ont., as should have been stated.

Cholberg Ship Yard, Victoria, B.C.—Work is proceeding on the two keels which were laid here early in September. The third shipway has been graded and timbered, and the third keel was expected to be laid during October. A fourth shipway is to be built alongside the first. An overhead system is to be installed for the distribution of materials to vessels under construction, and a wharf with derrick for handling ships' timbers from the water, has been completed.

J. Coughlan & Sons, Vancouver, B.C.—A new machine shop, pipe and copper-smith's shop, joiner, carpenter and paint shops, have been added to this plant recently, and 2 additional finishing berths have been completed, capable of taking vessels up to 150 ft. long. John Lockhart is General Manager.

H. W. Embree & Son, Halifax, N.S., are reported to be building two auxiliary

powering machinery will be supplied by the New Burrell Johnson Iron Co., and she will be equipped with electric light and other conveniences.

Lewis Bros., Sheet Harbor, N.S., launched a large schooner recently.

Little Brook, N.S.—A schooner is reported as about completed at this point, for Capt. C. W. Collins, Granville Ferry, N.S. Her dimensions are: length 163.6 ft., breadth 35.7 ft., depth 13.3 ft.; tonnage, 576 gross, 543 net.

Wm. Lyall Shipbuilding Co., Vancouver, B.C.—The second wooden auxiliary powered schooner to be built on the company's own account, was launched, Oct. 16, and named *Alice Beauclerc*, by Miss Dorothy Langford, a niece of F. W. Peters, General Superintendent, British Columbia District, C.P.R. The first vessel of this type to be built by the company, was launched at the end of September, and named *J. N. Greenshields*. These are 5 masted vessels, equipped with Diesel engines, and with deadweight capacity of 2,500 tons. The dimensions are: length 235 ft., breadth 44.8 ft., depth moulded 20.6 ft.

Wm. Lyall Shipbuilding Co., North Vancouver, B.C.—The city council has approved of a lease, at a nominal annual rent of land under water for 500 ft. from the shore line into the Inlet, from the end of Bewicke Ave., to the company, for shipbuilding purposes. It is stated that

W. J. Kelly, formerly of the Southern Transport Co., who is President.

**North Sydney, N.S.**—A 400-ton concrete steamship is under construction at North Sydney, N.S., and it is expected that the launching will take place during November. The dimensions are: length 130 ft., breadth 27 ft., depth 12 ft. It is stated that she is being built specially for carrying coal, but can be adapted for other cargoes. W. N. Macdonald, Sydney, and E. Gillard, North Sydney, are associated with the company responsible for the construction, and it is stated that they are considering the building of a concrete floating dry dock to handle 5,000 ton vessels.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—Two steam trawlers of the Castle class were delivered to the Naval Department early in October, and two

more, making a total of 8 during this year, were expected to be delivered before the end of the month, or early in Nov.

**St. Martins Shipbuilding Co., St. Martins, N.B.**, is reported to be building a wooden schooner for lumber cargoes. The vessel will be 141 ft. keel, 35 ft. beam and about 525 tons gross.

**A. A. Theriault, Belliveau Cove, N.S.**, is building a schooner, which will probably be launched early in Jan., 1919. She is of the following dimensions: keel 119 ft., beam 32 ft., depth 11½ ft.; tonnage 350 gross.

**Portuguese Vessel Purchase Reported.**—A press dispatch from London, Eng., states that Portuguese interests have purchased a single deck wooden steamship, now under construction at Vancouver, B.C. Particulars given state that she is to be classed at Lloyd's and is

estimated to a d.w. capacity of 3,500 tons on 22¼ ft. draft, with a speed of 10 knots an hour; dimensions: length 281 ft., breadth 48 ft., depth 27 ft. The price said to have been paid is about £34 a ton d.w. No information appears to be obtainable in Vancouver of this sale. Firms engaged in wooden shipbuilding there are concerned at present with orders for the Imperial Munitions Board, or for the French Government, with the exception of Wm. Lyall Shipbuilding Co., which is building some auxiliary powered schooners of smaller capacity than that stated, for its own account.

**W. D. Sweney, Yarmouth, N.S.**, is reported to have commenced work on a wooden steamship for St. John, N.B., parties. The dimensions are stated as: length of keel 97 ft., length over all 118 ft., beam 30 ft., depth 12 ft.

## Wooden Steamship Building in Canada for French Government.

As fully reported in Canadian Railway and Marine World for May, the Minister of Marine announced that after the orders given by the Imperial Munitions Board for steel and wooden cargo steamships for the British Government were completed, the Dominion Government would keep all the Canadian steel shipbuilding plants occupied for some time to come, in building steel cargo steamships, and that it would not permit any steel vessels to be built in Canada other than for Canadian or British registry. The Minister also announced that as the Government's shipbuilding programme did not include the building of any wooden steamships, it would permit the building of them for Canadian, allied or neutral owners, in the case of the two latter, of course, under license. To enable the wooden shipbuilding yards, which had orders from the Imperial Munitions Board, to carry on business after completing those orders, the Canadian War Mission to the United States, of which Lloyd Harris, of Brantford, is chairman at Washington, took the matter up with the various allied missions to the United States, and after considerable negotiations, arranged through the French High Commissioner for an order to be given for building in Canada 20 wooden steamships of 3,000 tons d.w. capacity. The Canadian War Commission also carried on a second negotiation with the French High Commissioner, which resulted in orders being given for building in Canada 50 wooden vessels of 1,500 tons d.w. capacity each.

The Foundation Co. of New York, N.Y., was given the order for the twenty 3,000-ton steamships, which will be built by the Foundation Co. of British Columbia, Ltd., in its no. 1 yard at Victoria, B.C., and in the yard at Point Ellice, Victoria, which it has taken over from the Cameron-Genoa Mills Shipbuilders, Ltd., and which it has named its no. 2 yard. Keels have already been laid for several of these vessels. Delivery is to be made by Nov. 1, 1919. The general dimensions will be as follows:

Length, over all.....	293 ft. 2 in.
Length, between perpendiculars.....	276 ft. 6 in.
Breadth, extreme.....	47 ft. 6 in.
Breadth, moulded.....	46 ft. 6 in.
Draft, over keel.....	21 ft. 9 in.
Displacement.....	about 5,600 tons
Deadweight.....	3,000 to 3,200 tons
Speed, loaded.....	about 9 knots

They will be built of British Columbia timber under Bureau Veritas rules and inspection for its highest class. There

will be one laid deck, and hold beams, and a longitudinal steel truss extending the whole length of the ship, similar to the s.s. City of Portland and the s.s. City of St. Helens. There will be three 24-ft. hatchways at 22-ft. centers. They will have 3 watertight bulkheads and watertight tunnel platform. They will have 2 Scotch boilers, with a heating surface of not less than 4,000 sq. ft. The main condenser will have 1,750 sq. ft. heating surface. The 2 engines, which will be supplied with steam at 180 lb. per sq. in. pressure, will have 3 cylinders, 13½, 22 and 36 in. diam. by 30 in. stroke, to yield 550 i.h.p. at 115 r.p.m. They will be equipped with electric lighting and wireless telegraph apparatus. While these steamships are spoken of as 3,000-ton ones, their deadweight is likely to be closer to 3,290 tons.

Acting on the French Government's behalf, Anderson & Co., of New York, have placed orders for the building in Canada, within 12 months, of 50 twin screw, well decked, wooden steam colliers, to be used to transport coal between England and France, as follows:—

Davie Shipbuilding & Repairing Co., Lauzon, Que.....	12
Fraser, Bruce & Co., Montreal.....	8
Wm. Lyall Shipbuilding Co., North Vancouver	8
National Shipbuilding Corporation, Three Rivers, Que.....	10
New Westminster Engineering & Construction Co., New Westminster, B.C.....	5
Pacific Construction Co., Port Coquitlam, B.C.....	2
Western Canada Shipyards, Ltd., Vancouver, B.C.....	5

The 1,500-ton steamships will have the following general dimensions:—

Length over all.....	204 ft. 6 in.
Length between perpendiculars.....	195 ft. 6 in.
Breadth, extreme.....	40 ft. 6 in.
Breadth of beam, moulded.....	39 ft. 8 in.
Depth, moulded.....	17 ft. 6 in.
Depth of hold.....	15 ft.
Draft over keel.....	16 ft.

They will be built of wood, under the Bureau Veritas' rules and inspection for the highest class. The hull will be of Douglas fir, one laid deck and hold beams. The usual watertight bulkheads will be provided. There will be three 16-ft. hatchways at 23-ft. centers. They will have long poop, well deck and forecabin. The water tube boiler will have a total heating surface of 2,300 sq. ft. The main condenser will have 900 sq. ft. heating surface. The twin compound engines, of 275 i.h.p. at 175 r.p.m., will have cylinders 12 x 24 in. diameter, by 16 in. stroke. They will have twin screw and will be lighted by electricity and equipped with wireless telegraph apparatus.

The Dominion Marine Department has granted licenses for the building of the steamships above mentioned for French registry.

The inspection of the building of these vessels will be in charge of R. H. Laverie, Chief Inspector for Bureau Veritas in the U.S. and Canada; and his assistants, R. S. Haight, Assistant Chief Inspector, and Capt. Ed. Patry, Chief Engineer to the head office, Bureau Veritas, and acting Chief Engineer in the U.S. The inspection work at the different yards locally will be attended to as follows: Lauzon, Que., Mr. Russell and Mr. Samson, engineer; Three Rivers, C. Duquette; Montreal, T. Jardine and his assistants. Mr. Jardine will also inspect the machinery installation at Three Rivers. In British Columbia, Frank Walker, Principal Surveyor, Bureau Veritas, for Seattle and British Columbia, will act as consulting advisor. The actual work will be supervised by Mr. Davis, and assistants when needed.

The Anderson Co., New York, has also given orders, on behalf of Belgian interests, for building 10 wooden steamships, steel braced, of about 3,200 tons d.w., the orders being placed as follows: New Westminster Construction & Engineering Co., New Westminster, B.C., 3; Pacific Construction Co., Vancouver, B.C., 2; Western Canada Shipyards, Ltd., Vancouver, 4. Their principal dimensions will be as follows:

Length between perpendiculars.....	276 ft.
Beam, extreme.....	47½ ft.
Beam, moulded.....	46½ ft.
Depth, moulded.....	23½ ft.
Draft, loaded.....	21¾ ft.

**Welland Canal Lock Gate Accident.**—The Montreal Transportation Co.'s s.s. Oatland, en route from Kingston to Port Colborne, light, is reported to have carried away the two head gates of lock 8 in the Welland Canal, Oct. 23, and was washed back to the lower level, but escaped undamaged. The cause of the accident, as reported, is the old one of mistaken signals between the bridge and the engine room, the master stating that he gave the signal to reverse, whereas the engine went forward with increased speed.

**British Colonies Transportation Co., Ltd.**, particulars of the organization of which were published in Canadian Railway and Marine World for August, has declared a dividend of 2% on preferred stock and 2% on common stock, payable Nov. 1.

# Cargo Steamship Building in Canada for British Government.

**Boiler Troubles.**—The Victoria, B.C., Times published the following on Oct. 5: "Boiler trouble appears to be a chronic malady with the initial ships of the I. M. B. fleet sent to sea. Following the reports reaching here that the War Selkirk had been towed into a southern port in a crippled condition, it has been learned that the War Nootka, the second vessel to be completed, experienced similar trouble on the Atlantic side. An engineer in this city has received the following letter from one of the engine room staff on the War Nootka, which tells its own tale:

"We arrived here (name deleted) a few days ago; you will thus see, if your imagination is any good, that we have not had a very pleasant voyage. Of course it was only the expected that happened, but I don't think anybody expected it to happen so quickly, or so often. I won't worry you by giving you details of what we have gone through. The time we have been on the voyage, putting into (name deleted) on one boiler, and that absolutely done and 10 days' hard work there with short help, tells its own tale to you. At first we had engine trouble, main and auxiliary. Before seven days we had been at every part of her. Then we began to have trouble. The boilers started; we have 20 tubes stopped up now, and I can tell you the times we went into those boilers, and the heat of them nearly cost three of us our health."

"The letter goes on to say that the ship will not be allowed to proceed until she has been made all right. The letter contains reference to the War Yukon, which has since been reported at her destination, and concludes with 'We don't see the War Songhee yet.'"

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to Oct. 29, giving in each case the date of the launching, the name of the steamship, the name of the builder and the deadweight tonnage:—

Steel Steamships.	
May 18, 1917—War Dog, Wallace Shipyards	4,500
July 9, 1917—War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	1,800
Aug. 19, 1917—War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300
Nov. 3, 1917—War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918—War Camp, J. Coughlan & Sons, Vancouver, B.C.	8,800
Mar. 23, 1918—War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918—War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
May 8, 1918—War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
May 21, 1918—War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	2,400
May 27, 1918—War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
June 8, 1918—War Earl, Canadian Vickers Ltd., Montreal	7,000
June 29, 1918—War Duchess, Canadian Vickers Ltd., Montreal	7,000
July 20, 1918—War Hathor, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
July 29, 1918—War Charger, J. Coughlan & Sons, Vancouver, B.C.	8,500
Aug. 19, 1918—War Chief, J. Coughlan & Sons, Vancouver, B.C.	8,500
Aug. 21, 1918—War Weasel, British-American Shipbuilding Co., Welland, Ont.	3,500
Sept. 6, 1918—War Witch, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
Sept. 19, 1918—War Taurus, Polson Iron Works, Ltd., Toronto	3,500
Sept. 28, 1918—War Faith, Canadian Vickers Ltd., Montreal	7,000
Sept. 28, 1918—War Noble, J. Coughlan & Sons, Vancouver, B.C.	8,800
Sept. 28, 1918—War Storm, Wallace Ship-	

yards, Ltd., Vancouver, B.C.	4,600
Oct. 5, 1918—War Horus, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,100
Oct. 15, 1918—War Hydra, Polson Iron Works, Ltd., Toronto	3,500
Oct. 24, 1918—War Fiend, Midland Shipbuilding Co., Midland, Ont.	3,400
Oct. 29, 1918—War Joy, Canadian Vickers Ltd., Montreal	7,000

Total 25 steel vessels .....121,100

Wooden Steamships.	
Dec. 28, 1917—War Songhee, Foundation Co., Victoria, B.C.	3,080
Jan. 4, 1918—War Nootka, Western Canada Shipyards, Vancouver, B.C.	3,080
Jan. 24, 1918—War Yukon, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria	3,080
Feb. 16, 1918—War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
Mar. 6, 1918—War Selkirk, Western Canada Shipyards, Vancouver, B.C.	3,080
Apr. 10, 1918—War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
Apr. 11, 1918—War Comox, New Westminster Construction & Engineering Co., New Westminster, B.C.	3,080
Apr. 11, 1918—War Masset, Foundation Co., Victoria, B.C.	3,080
Apr. 13, 1918—War Tyee, Pacific Construction Co., Coquitlam, B.C.	3,080
Apr. 25, 1918—War Haida, Cameron-Genoa Mills, Victoria, B.C.	3,080
Apr. 27, 1918—War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 11, 1918—War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que.	3,080
May 11, 1918—War Sioux, Port Arthur Dredging Co., Port Arthur, Ont.	3,080
May 21, 1918—War Atlin, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 23, 1918—War Tatla, Western Canada Shipyards, Ltd., Vancouver, B.C.	3,080
June 12, 1918—War Skeena, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.	3,080
June 14, 1918—War Edensaw, New Westminster Construction & Engineering Co., B.C.	3,080
June 15, 1918—War Babine, Foundation Co., Victoria, B.C.	3,080
June 24, 1918—War Nicola, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
June 28, 1918—War Quebec, Quebec Shipbuilding & Repairing Co., Quebec, Que.	3,080
June 29, 1918—War Ontario, Toronto Shipbuilding Co., Toronto	3,080
July 5, 1918—War Huron, Fraser, Brace & Co., Montreal	3,080
July 5, 1918—War Erie, Fraser, Brace & Co., Montreal	3,080
July 6, 1918—War Casco, Western Canada Shipyards, Ltd., Vancouver, B.C.	3,080
July 12, 1918—War Sumas, Pacific Construction Co., Port Coquitlam, B.C.	3,080
July 24, 1918—War Squash, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
July 27, 1918—War Gaspe, Quinlan & Robertson, Quebec, Que.	3,080
July 27, 1918—War Ottawa, Fraser, Brace & Co., Montreal	3,080
Aug. 5, 1918—War Chilkat, Western Canada Shipyards, Vancouver, B.C.	3,080
July 29, 1918—War Stikine, Cameron-Genoa Mills Shipbuilders, Victoria, B.C.	3,080
Aug. 31, 1918—War Camchin, Foundation Co., Victoria, B.C.	3,080
Sept. 7, 1918—War Sorel, Quebec Shipbuilding & Repair Co., Quebec	3,080
Sept. 8, 1918—War Nanoose, Foundation Co., Victoria, B.C.	3,080
Sept. 19, 1918—War Niagara, Fraser, Brace & Co., Montreal	3,080
Sept. 21, 1918—War Halifax, Southern Salvage Co., Liverpool, N.S.	3,080
Sept. 22, 1918—War Nipigon, Great Lakes Dredging Co., Port Arthur, Ont.	3,080
Sept. 23, 1918—War Matane, Quinlan & Robertson, Quebec, Que.	3,080
Sept. 26, 1918—War Ewen, New Westminster Construction & Engineering Co., New Westminster, B.C.	3,080
Oct. 26, 1918—War Toronto, Toronto Shipbuilding Co., Toronto	3,080

Total 43 wooden vessels .....132,440  
Aggregate deadweight tonnage of 25 steel vessels and 43 wooden vessels, 253,540.

**Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.**—The wooden cargo steamships War Skeena and War Haida

underwent their trials during the early part of October, the former developing 12½ knots over the measured mile, and the latter about 11 knots an hour. This company is now in voluntary liquidation, and the yard has been absorbed by the Foundation Co., Ltd.

**Canadian Vickers Limited, Montreal.**—The s.s. War Joy, 7,000 tons, was launched, Oct. 29, by S. H. Watson, a representative of the British Ministry of Shipping, without ceremony. This is the last of 4 steel cargo steamships ordered by the Imperial Munitions Board for the British Government from this company. The s.s. War Faith, which was launched Sept. 28, is loading cargo, and is expected to sail early in November on her maiden voyage.

**J. Coughlan & Sons, Vancouver, B.C.**—The fourth steel steamship to be built at this yard under order of the Imperial Munitions Board for the British Government, was launched Sept. 28, and named War Noble. She has a deadweight capacity of 8,800 tons.

The steel steamship War Charger, 8,800 tons, which was launched July 29, was expected to be ready for her trial runs during the latter part of October, after which she will be handed over to Raeburn & Verel for operation on behalf of the British Government.

**Foundation Co., Victoria, B.C.**—The wooden steamship War Babine, launched June 15, underwent her trials in Parry Bay, Oct. 7.

**Grant & Horne, St. John, N.B.**—In publishing in our October issue an illustration of the s.s. War Fundy, built for the British Government by Grant & Horne, she was mentioned as a steel cargo steamship, instead of a wooden one.

**Great Lakes Dredging Co., Port Arthur, Ont.**—The wooden steamship War Nipigon, which was launched at this yard, Sept. 22, completed the Imperial Munitions Board's order with this company.

**Wm. Lyall Shipbuilding Co., North Vancouver, B.C.**—The wooden steamship War Nicola, launched June 24, the fifth of the vessels built for the Imperial Munitions Board, by this company, left Vancouver for a trial trip to Victoria, Oct. 15. She is reported to have answered satisfactorily, making the trip in 6 hr. 10 min., averaging 13 knots an hour.

**Midland Shipbuilding Co., Midland, Ont.**—The first of the three steel steamships to be built by this company for the British Government under order from the Imperial Munitions Board, was launched Oct. 24, and named War Fiend, by Mrs. D. L. White, wife of the President of the company, and who is also mayor of the town. This is the first steel steamship to be built at Midland. She is 261 ft. long, 43½ ft. beam, and has a moulded depth of 23 ft.; tonnage, 3,400 deadweight. She is to be equipped with triple expansion engines of the surface condensing type, developing 1,250 h.p., supplied with steam by 2 Scotch boilers, and completely fitted with electric light, cargo winches, steam windlass, etc., for ocean service. The keel for the second vessel has been laid, and a third one will be laid shortly.

**New Westminster Construction & Engineering Co., New Westminster, B.C.**—The fourth wooden steamship under the Imperial Munitions Board's order, was launched Sept. 26, and named War Ewen. This completes the order with this company. The s.s. War Edensaw, launched

June 14, was expected to be sent on her trial trip during the last week of October.

**Pacific Construction Co., Coquitlam, B. C.**—The wooden steamship War Tye, which was launched Apr. 13, was hauled out on the slip at Yarrows, Ltd., yards, in the early part of October, for cleaning and painting preparatory to undergoing her trials. The s.s. War Sumas, launched July 12, was expected to be fully equipped and ready for her trials by the end of October.

**Polson Iron Works, Ltd., Toronto.**—The s.s. War Hydra, sister vessel of the s.s. War Taurus, which was launched Sept. 19, was launched Oct. 15, the christening ceremony being performed by Mrs. Turnbull, wife of Harvard Turnbull of the Imperial Munitions Board. The War Hydra is the second of 6 steel steamships under order for the British Government through the Imperial Munitions Board. She is expected to be ready for her cargo about the end of November.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—The last of the 6 steel cargo steamships under construction for the British Government, was launched Oct. 5, and named War Horus, by Mrs. James Connée, Port Arthur. She is a steel screw, single deck, general freight carrying steamship, with straight stem and semi elliptic stern, with poop, bridge and forecastle, and is built on the transverse system with inner bottom throughout. Her dimensions are: length over all 261 ft., length between perpendiculars 251 ft., breadth moulded 43½ ft., depth moulded 23 ft.; tonnage, 2,240 gross, 3,400 deadweight. Cargo will be handled by 4 steel derrick posts fitted with 8 booms, each boom being served by a 7 x 12 in. reversible double drum steam winch. The propelling machinery consists of a triple expansion surface condensing engine with cylinders 20½, 34½ and 55 in. diam. by 40 in. stroke, and supplied with steam by 2 Scotch boilers each 15 ft. diam. by 11 ft. long at 190 lb. working pressure and developing about 1,500 i.h.p.

**Quinlan & Robertson, Ltd., Quebec, Que.**—The wooden steamship War Mohawk, launched May 11, completed her trial trips Oct. 9, in the St. Lawrence, between Quebec and Goose Island. The outfitting of the steamships War Seneca, War Gaspe and War Matane, is being pushed, so that it is expected all will be able to clear to sea before the close of the St. Lawrence navigation for the winter.

**Southern Salvage Co., Liverpool, N.S.**—The wooden steamship which this company had on order from the Imperial Munitions Board for the British Government, was launched Sept. 21, and named War Halifax.

**Toronto Shipbuilding Co., Toronto.**—The second of the 2 wooden hulls, under order by the Imperial Munitions Board for the British Government, was launched Oct. 26, and christened War Toronto, by Mrs. C. A. Boone, wife of Major Boone, one of the company's directors, who has just returned from the front on leave.

**Wallace Shipyards, Ltd., North Vancouver, B.C.**—The steel cargo steamship War Storm was launched at this yard, Sept. 28, the christening being performed by Mrs. A. Wallace, wife of the Manager. She has a deadweight capacity of 4,600 tons, and is a sister vessel of the steamships War Dog and War Power, launched from the same yards May 18, 1917, and Mar. 23, 1918, respectively. It is announced that on completion, she will be handed to Raeburn & Verel, for operation on behalf of the British Government.

## Steel Cargo Building for Dominion Government.

**Orders for Steamships.**—We have been officially advised that the following orders had been placed up to Oct. 24:—

	No.	d.w. tons each.	Total d.w. tons.
Canadian Vickers Ltd.	2	4,300	8,600
Canadian Vickers Ltd.	6	8,100	48,600
Collingwood Shipbuilding Co.	1	3,750	15,000
Davie Shipbuilding & Repairing Co.	2	5,100	10,200
Halifax Shipyards Ltd.	2	8,100	16,200
Port Arthur Shipbuilding Co.	2	3,400	6,800
Tidewater Shipyards.			
Wallace Shipyards Ltd.	1	4,300	4,300
Ltd.	4	5,100	20,400
Victoria Machinery Depot, Ltd.	2	8,100	16,200
	25	—	146,300

This list shows a total of 25 vessels with an aggregate deadweight capacity of 146,300 tons. The list of orders, of which Canadian Railway and Marine World had been advised, as given in the October issue, showed 24 steamships with an aggregate deadweight capacity of 118,600 tons. Since then, orders have been placed for 1 vessee 4,300 tons and 5 of 8,100 tons each, with Canadian Vickers, Ltd., and 2 of 8,100 tons each with the Victoria Machinery Depot. The latest official list of orders placed does not, however, contain the orders mentioned in our October list, as having been placed with the British-American Shipbuilding Co., Welland, Ont., 2 vessels 4,300 tons each, and Wallace Shipyards, Ltd., 1 additional of 4,300 tons, and 4 (advised as under provisional agreement) of 5,100 tons each.

**Steamship Building Prices for British Columbia.**—An Ottawa press dispatch of Sept. 24 stated that a deputation of British Columbia shipbuilders had waited on the Minister of Marine asking higher prices for building steel cargo steamships, on the ground that they could not compete with Seattle and other places, as higher rates are paid there, and another Ottawa press dispatch of Sept. 25 credited the Minister of Marine with stating that higher prices were not being paid at Seattle and that the United States Government was getting vessels built cheaper than the Dominion Government. We have since been officially advised that the representatives of British Columbia shipbuilders who waited on the minister were Mr. Coughlan, of J. Coughlan & Sons, and W. E. Hodges, of Wallace Shipyards, Ltd., and that they contended that higher prices should be paid to builders in British Columbia than to builders in eastern yards. We are also advised that the minister stated, in an interview, that higher prices than he was offering British Columbia builders were not being paid for the construction of similar vessels at U.S. Pacific Coast yards.

**Midland Shipbuilding Co., Midland, Ont.** At the launching of the s.s. War Fiend for the British Government, by the Midland Shipbuilding Co. at Midland, Ont., Oct. 24, James Playfair stated that the company expects to receive orders from the Dominion Government for 2 steel cargo steamships under the Minister of Marine's shipbuilding programme. The size to be built is under consideration, but the company would of course prefer to build the 3,300 to 3,400 type, which it is most accustomed to.

**Canadian Vickers, Ltd., Montreal.**—With the completion of contracts for the British Government, placed through the Imperial Munitions Board, by the launch-

ing of the s.s. War Joy, Oct. 29, attention is being concentrated entirely on the building of steel cargo steamships for the Dominion Government, of which this company will build 8, some of them probably being completed this year.

**Nova Scotia Steel & Coal Co., New Glasgow, N.S.**—A press report states that the Minister of Marine announced at Halifax recently that 2 steel steamships are to be built at this company's yard at Trenton, N.S., for the Dominion Government, to be about 2,800 tons each. It is also stated that Jas. Meikle, who has been acting as an inspector in the clearing up of the area affected by the recent Halifax disaster, has returned to the company's service, in charge of steel vessel building.

**Victoria Machinery Depot Co., Ltd., Victoria, B.C.**—The Victoria Times, in referring to the return there on Sept. 27 of J. C. McIntosh, M.P. for Nanaimo, says he stated that after a conference he had in Ottawa, on Sept. 16, with the Prime Minister and the Minister of Marine, the following written statement was given by the Minister of Marine:—

"In view of the attitude assumed by the Victoria Machinery Depot Co., the Minister is prepared to give an undertaking that, in the event of its establishing a 2-berth yard, he will, when it is ready, place contracts with it from time to time to keep the yard fully occupied for two or three years, at such current prices as may be fair and reasonable."

Mr. McIntosh had a conference subsequently with the Minister and Deputy Minister of Marine, as a result of which the Deputy Minister telegraphed the Victoria Machinery Depot Co. on Sept. 18 as follows:—

"After interview with Mr. McIntosh, we make your firm the offer of two ships of 8,100 tons as per plans and specifications. Department will use its best endeavors to secure steel at the earliest possible date. Confirming Mr. McIntosh's wire, see no reason why, finances permitting, your yards should not be kept going to the full for two or three years, and longer, as the government's policy is permanent. If this offer meets with your approval, please wire acceptance, when articles of agreement will be prepared and forwarded to you for execution."

Mr. McIntosh added that the offer was accepted by the Victoria Machinery Depot Co., that work will be started as soon as the agreement is signed, and that 10 steamships will be built at an expense of \$15,390,000.

It will be remembered that some controversy took place some time ago regarding placing of orders with this company by the Dominion Government, when the company took exception to the terms which it stated had been offered to it by the government for building three vessels. It was, however, denied at Ottawa that the government had offered the company any contract, and it was stated that a representative of the company had been informed, after looking over the government's plans, that the company might submit an offer, but that it has not done so. The complaint as to price was that the company had been offered the same price per ton for building 5,100 ton vessels as other builders received for building 8,800 ton vessels, viz., \$200, which it considered unfair.

The Victoria Machinery Depot Co.'s officers are: C. J. V. Spratt, President; A. J. Ormerod, Secretary; and W. J. Brinkman, Manager. The company has a marine railway, with the following dimensions: cradle, 286 ft. long, beam 48 ft.; depth of water, forward end, 18 ft.; depth of water, end of ways, 20½ ft.; capacity up to 3,000 tons. The company

does considerable local repair work, particularly on C.P.R. steamships, and during the past two years has done a good deal of work for the Imperial Munitions Board.

### Welland Canal Lock Gate Accident.

The Montreal Transportation Co.'s s.s. Oatland, while upbound light, Oct. 16, struck the head gates of lock 8 on the Welland Canal, carrying them both out. The banks at the head of lock 7 were only slightly washed, as the reach above lock 8 is a comparatively short one, and the one below a very long one. The vessel was not damaged. Two spare gates were placed in position, and navigation resumed within 12 hours. Two vessels only were delayed, and that for a short time. The estimated cost of repairs is \$5,000.

The cause of the accident, as given, is mistaken signal between the bridge and the engine room, the master signalling to reverse, and the engine being put ahead. It is a singular thing that the same vessel, in charge of the same master, did precisely the same thing at lock 8, Apr. 30, 1916. The vessel was then named W. J. Averell, and owned by the Canada Shipping Co., having been owned previously by the Rutland Transit Co., Ogdensburg, N.Y. The last mentioned accident was due to the steel hawser getting caught in the vessel's condenser.

### Basil Magor Appointed District Manager, U.S. Emergency Fleet Corporation.

Basil Magor, formerly Vice President and Managing Director, National Steel Car Co., who left Hamilton, Ont., and returned to the United States, some months ago, has been appointed by the Vice President and General Manager of the United States Shipping Board Emergency Fleet Corporation, as District Manager for the North Atlantic District, which includes all shipyard plants in the territory formerly known as districts 1 and 2. He will be the resident district representative of the Vice President and General Manager, and will have supervisory jurisdiction over all phases of ship production and inspection in the district. He will have charge of the development of such organization as may be necessary for the supervision of the shipbuilding operation at the shipyard plants within his jurisdiction holding contracts with the Emergency Fleet Corporation, the appointment of such assistance for steel, wood and concrete ship construction work as may be necessary, the appointment of an assistant district manager and the authorization of emergency expenditure.

Local representatives of the various home office organizations detailed for work within, or for the plants falling within the jurisdiction of the North Atlantic District, will carry on their respective duties under the District Manager's general supervision and control. These will include specifically the local representatives of the following home office organizations: Plant protection section, passenger transportation and housing division, industrial relations division, national service section, planning and statistics section, shipyard plant division, steel and wood ship construction divisions.

It is the purpose of the Emergency Fleet Corporation's management to require all employees, detailed permanently or temporarily from the home office or-

ganizations, to report to the District Manager of the district in which their work is to be carried on, for the purpose of providing a centralized local administration and establishing an effective local supervision of their activities. The local representatives of the various sections and divisions of the home office will be held responsible, by the executive heads of their respective organizations, for the performance of their work in conformity to the established policies and standards of the Emergency Fleet Corporation. They will be held responsible by the District Manager for the performance of their work at such time, in such place, and in such manner as will contribute most effectively to the carrying out of the Emergency Fleet Corporation's shipbuilding programme.

Representatives of the Supply Division, or the sections thereof, having offices within the North Atlantic District, will continue to perform their duties as heretofore and report directly to the Manager of the Supply Division. The managers of the Steel Ship Construction Division and the Wood Ship Construction Division will continue to carry out in all respects their duties as heretofore, under the Vice President's and General Manager's control.

### The Expropriation of the Halifax Dry Dock.

In view of certain letters which have appeared in the daily press regarding the Halifax dry dock, a Chronicle reporter interviewed some Halifax persons who were advised of the facts, and the following statement was made: "During the recent visit of the Minister of Marine to Halifax, he met the President and council of the Board of Trade, and with reference to the dry dock and the shipbuilding enterprise he said that in company with the Minister he had visited Halifax after the explosion. It was a matter of anxiety to the Dominion Government that the dry dock had been so badly damaged.

"In consultation with S. M. Brookfield, the latter said that with so many of his employees killed and the large cost of repairing the dock, that the dry dock company might be unable to accomplish these repairs quickly. Mr. Brookfield then said the government should buy the dock, and offered it for \$1,250,000. At that time Messrs. Ballantyne and Carvell decided that the government was not in a position to take over the dock, but agreed to advance the dry dock company the money necessary to make the repairs. Repairs were undertaken, but as they did not proceed expeditiously, the government sent representatives from Ottawa to Halifax to expedite repairs, as the dock was very essential for war work.

"Later the Minister of Marine said that he had been able to secure the co-operation of the Halifax Shipyards, Limited, to build steel steamships in Halifax. This company is putting between \$4,000,000 and \$5,000,000 in the project, and it was decided that it was in the best interests of the city that the shipyard should be placed next the dry dock. Negotiations were opened with the dry dock company for the purchase of the dock by the Halifax shipbuilders, but Mr. Brookfield was not willing to name a price. Having in view the fact that he was willing to sell the dock to the government in Dec., 1917, for \$1,250,000, and it being in the interests of the country and of the city that a shipyard should be established the Government expropriated the dock, and its

value will be determined by the Exchequer Court.

"Not wishing to operate the dock as a government property, it has been leased to the Halifax Shipyards, Limited, which in turn purchased from Mr. Brookfield, at a price fixed by himself, the marine slip at Dartmouth, and certain equipment at the dry dock. The Minister of Marine added that beyond giving the Halifax Shipyards, Limited, a contract for 4 steel steamships, the Dominion had not contributed any subsidy or bonus whatever, nor did the City of Halifax, nor the Province of Nova Scotia. The order for ships was placed on the same basis that orders for some 20 others had been given to other shipbuilding companies in Canada, and which are now under construction, and some 30 more which are to be built next year."

### Nova Scotia Steamships, Limited.

This company was organized recently to operate a steamship service between Halifax, N.S., Newfoundland, Boston and New York, and has leased the old Plant Line terminal on the south side of Commercial wharf, Boston, Mass. Announcement has been made previously, that the company is utilizing the offices and wharves formerly occupied by the Canada Atlantic & Plant Steamship Co., at Halifax. F. H. Chipman, formerly Manager, Canada Atlantic & Plant Steamship Co., is Resident Manager, Boston, Mass.; the Federal Line is agent at New York; H. L. Chipman, at one time Manager, C.A. & P.S. Co., is Manager at Halifax, N.S., and Shea & Co. are agents at St. John's, Nfld. We are officially advised that the steamships Cascadepia and Lady of Gaspe are being operated between St. John's, Nfld., and New York, calling at Halifax and Boston. The call at Boston is not, at present, being made every trip, but only as conditions warrant. Full cargoes are being taken each trip, freight only being handled.

The s.s. Cascadepia was originally built as a sailing vessel, at Dundee, Scotland, in 1895. She was owned by Canada Steamship Lines, Ltd., and is screw driven by engine of 260 n.h.p. Her dimensions are: length 245.2 ft., breadth 35.2 ft., depth 22.5 ft.; tonnage, 1,849 gross, 1,185 register. She has accommodation for about 100 passengers. The Lady of Gaspe was built at Glasgow, Scotland, in 1877, and named Restigouche, and later, Rathlin. She was formerly owned by the Gaspe Steamship Co., Quebec, Que., and is screw driven by engine of 180 n.h.p. Her dimensions are: length 229.7 ft., breadth 31 ft., depth 16.1 ft.; tonnage, 1,237 gross, 774 register, and has no accommodation for passengers.

The Henriette Ship Co., Ltd., the incorporation of which was announced in our last issue, with office at Vancouver, B.C., has acquired the s.s. Henriette from the Coastwise Steamship & Barge Co., and has had her converted into a four masted schooner, for operation in the Australian trade. The Henriette was originally a French schooner and was wrecked at the mouth of the Columbia River several years ago. About eight years ago she was acquired by the Grand Trunk Pacific Coast Steamship Co., equipped with propelling machinery, and operated in the coast trade between Vancouver and Prince Rupert. She was purchased later by the Coastwise Steamship & Barge Co., and operated in the ore trade between Anyox and Puget Sound ports.

# The Minister of Marine's Visit to the Maritime Provinces.

The Minister of Marine, Hon. C. C. Ballantyne, accompanied by the Deputy Minister, Alex. Johnston, left Montreal, Sept. 29, on a trip of inspection of ports in the Maritime Provinces, and returned to Montreal, Oct. 6. Two days were spent in Sydney, N.S., where the harbor was inspected, and a similar period was spent in Halifax, N.S., where they were entertained to luncheon by the Board of Trade, when the Minister spoke of the Government's shipbuilding programme as it affected Halifax and district. St. John, N.B., was visited on Oct. 5, and the harbor and development work in Courtenay Bay were inspected.

In addressing the Canadian Club at St. John, N.B., Oct. 5, the Minister said: "I became a convert long ago to the necessity of nationalizing Canada's important seaports. At present the harbors under the control of the Marine Department being developed and operated as national ports are Montreal and Quebec and Vancouver. Representation has been made to me by your federal members, the city council, and others, that the government should take over the port of St. John as one of the country's most important national ports. I am heartily in sympathy with this, and it will be a pleasure for me, before the next session of Parliament, favorably to recommend to the government that the port of St. John be included amongst Canada's national seaports, and placed under a permanent harbor commission appointed by the government. My six years as one of the harbor commissioners for the port of Montreal during the big construction period, and the experience I gained there, convince me that the best way in the interests of the country to develop and operate successfully the port of St. John is to have it taken over by the government, under the jurisdiction of the Minister of Marine, and developed and operated by a small commission the same as at the port of Montreal.

"I had the pleasure of looking over your port facilities this morning, which I have not seen for the last six years, and while they are very good, much has yet to be done to make the harbor a modern one. If the government decides to nationalize the port of St. John and place it under my direction as the Minister of Marine, I hope you will then place before me the names of three good representative business men who will be willing to devote a portion of their time and energy to their duties as harbor commissioners. I would also strongly recommend, which recommendation I would be prepared to carry out, that a capable engineer, who understands harbor development thoroughly, should make a complete survey of your harbor as it now exists, and prepare plans for 10 or 15 years ahead looking to the future development, and that these plans should be very carefully prepared and well thought out in order that whatever work may be done in any one year, it would be part of a large, well-conceived scheme.

"St. John and Halifax are Canada's two winter ports, and the volume of business to be done in the future will very greatly exceed that done in the past, and I hope also that the all-the-year-round business of these two ports will continue to grow in volume, and the government must see to it that accommodation is provided well in advance to cope with it.

"The government has granted the dry

dock subsidy for the construction of a large graving dock at Courtenay Bay, and this is part of the modern port equipment. Rapid loading and unloading of vessels and the time in which a vessel can be turned around is very important. Therefore, when plans are being prepared for a more modern equipment for the port of St. John, it will be necessary to see to it that the port has good railway facilities and all modern appliances for the rapid unloading and discharging of cargoes.

"I have had a royal commission investigate your pilotage system, and a report has been rendered by them which I hope to give consideration to immediately on my return to Ottawa. For the success of the port of St. John, or any other of Canada's big seaports, it is very essential that the pilotage system should be on a most efficient basis. It is my intention, if the pilotage system of the whole of Canada comes under the Marine Department, to see to it that the general superintendent of pilots at each one of the important seaports shall be an experienced man, and it will be necessary for him to have had seagoing experience, and to hold a master mariner's certificate. I understand that it is the general expression of opinion that the government should take over the pilotage system of St. John, and after I have read the report of the royal commission this will probably be done. I want to assure you, however, that the pilots will be well looked after under the care of the government, and that none of their interests will suffer in any degree, the government's only object being in making such change as will make for greater efficiency in this important branch.

"You are aware that I announced in Parliament on April 4, last, that the government, after careful consideration, had decided to go in for steel shipbuilding on a permanent basis. Prior to this the Imperial Munitions Board was building steel ships in some of the yards for England, and it was thought a wise policy by the government for Canada to occupy these yards to the full in building steel ships for the Dominion Government. In order to make steel shipbuilding in Canada secure a contract was entered into with the Dominion Steel Corporation at Sydney, N.S., for 250,000 tons of ships plates covering a period of 5 years. This mill is under erection at a cost of \$5,000,000 and I am pleased to inform you that I expect it to be completed and rolling ships plates by July next.

"You will be interested to know that the annual output of Canada's yards for steel ships at present amounts to 250,000 tons. The government has under construction at the moment 22 steel ships, approximating in cost \$25,000,000, and the number of ships that will be under construction next year will be considerably larger than what is being constructed at the present time, and approximating in cost \$35,000,000. The size of the ships being constructed by the government is 10,500 tons, 8,100 tons, 4,350 tons and 3,750 tons, d.w., the smaller size vessels being constructed in the shipyards on the Great Lakes, their size being limited by the width and depth of the canals. These ships on completion will be owned and operated by the Canadian Government. I am determined that the government's ships shall be managed entirely free from politics and on a strictly business basis.

"It is also necessary for the government to have ships to operate on the Pacific and Atlantic Oceans and on the Great Lakes in conjunction with the great transcontinental railway which the government now operates, the Canadian Northern Ry., and the Intercolonial. There will be ready for sea this autumn 2 ships, and possibly 4, of 8,100 tons and 4,350 tons. At least two of these ships will be ready to go to sea by early December, and it will be the first time in the history of Canada that her own merchant marine will have ploughed the seas.

"The names of the first three ships will be Canadian Pioneer, Canadian Voyager and Canadian Warrior; the first two will be built by Canadian Vickers Ltd., and the third by Collingwood Shipbuilding Co. The prefix Canadian will be followed throughout for the names of all the government ships."

A St. John paper also credits the Minister with stating there that he understood the construction of a steel shipbuilding plant at St. John was contemplated and that the government would give whatever company started, contracts on the same basis as Halifax and other yards.

## Loss of C.P.R. Princess Sophia.

The C.P.R. s.s. Princess Sophia, which sailed from Skagway, Alaska, Oct. 23, with a heavy passenger list, for Vancouver, ran on the Vanderbilt Reef, in the Lynn Canal, about half way between Skagway and Juneau, some time on Oct. 24. It was considered that being fast on the rocks, and comparatively sheltered, there was little, if any, danger for the passengers and crew, until assistance could be sent. Several smaller vessels, such as lighthouse tenders, etc., answered the calls, and the C.P.R. immediately dispatched a vessel from Vancouver to take over the passengers. On the morning of Oct. 25 the U.S. tender Cedar approached within 400 yards of the Princess Sophia, but could not obtain anchor hold, and was driven back, the storm having increased considerably. Later, the Cedar received a wireless message from the Princess Sophia that she was sinking, and when daylight broke on Oct. 25, nothing was to be seen of the vessel but the foremast, she apparently having been driven across the reef into deep water, where she sank, with all passengers and crew. The number of lives lost reported at the time of writing, is 346; of these, 285 were passengers, and 61 crew.

The White Pass & Yukon Ry. Co. issued a list of 84 of its employees who were on board, among them being Capt. C. J. Bloomquist, master; J. R. Young, chief engineer; A. McLeod, second engineer; S. S. Chenery, purser, s.s. Dawson; M. W. Schellingtaw, B. Wilkin, Victoria, B.C.; R. C. Haws, P. Vint, Vancouver, B.C., and Capt. J. F. Douglas, New Westminster, B.C.

The s.s. Princess Sophia was built at Paisley, Scotland, in 1911, and was screw driven by engine of 182 n.h.p. Her dimensions were: length 245.2 ft., breadth 44.1 ft., depth 24 ft.; tonnage, 2,320 gross, 1,466 register.

The British American Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$3,000,000 capital and office at Toronto, to own and operate steam and other vessels, and to carry on a general navigation and

## Atlantic and Pacific Ocean Marine.

Canadian Pacific Ocean Services' steamships *Empress of Japan* and *Monteagle*, are reported to have been requisitioned for Government purposes. It is stated that either the *Empress of Asia* or the *Empress of Russia*, will be released shortly for the company's service.

## Maritime Provinces and Newfoundland.

The name of the s.s. *Meteghan I.*, owned in Meteghan, N.S., and registered at Yarmouth, N.S., has been changed to Robert Austin.

The Newfoundland Steam Screw Tug Co., Ltd., is being wound up voluntarily, with R. G. Rendell and W. G. Strong, St. John's, Nfld., as liquidators.

The Newfoundland customs cruiser *Fiona*, which has been in service since 1884, was sold Oct. 1, by public auction, to James Baird, Ltd., for \$13,500.

The Dominion Public Works Department has awarded the contract for the repair of its s.s. *Tyrian*, to T. Hogan & Co., Halifax, N.S., for \$19,890.

Owing to the development of a leak in the bottom of lock 4 on the Soulages Canal, Oct. 18, traffic was tied up for several days, and there was considerable congestion of vessels.

The contract for the dredging at the Dominion Government wharf at Fourchu, N.S., has been awarded by the Public Works Department to the Atlantic Dredging Co., at 60¢ a cubic yard, the total being about \$5,400.

The steam tug *Hugh D.*, owned heretofore by Hugh Cann & Sons, Yarmouth, N.S., is reported sold to New York interests. She was built at Shelburne, N.S., in 1908, and is equipped with engine of 24 n.h.p., driving a screw. Her dimensions are: length 80 ft., breadth 18 ft., depth 7.6 ft.; tonnage, 71 gross, 32 register.

The schooner *Lavonia*, which ran aground at Cape Tormentine, N.B., several months ago, and which was purchased by Mr. McManus, Moncton, N.B., was refloated and taken to Pictou, N.S., recently, where she had a new bottom put in, and had a general overhaul. She is not reported to have been sold for about \$34,000. R. Hall is now managing owner.

The s.s. *Stella Maris*, which was at anchor in Halifax harbor when the disastrous explosion occurred there in December, 1917, and had a large piece of metal driven through her hull, is being repaired by the Halifax Shipyards, Ltd., and is expected to be ready for service again, early in November. She is of about 500 tons, was originally a gun boat, and was sold by the Halifax Graving Dock Co. to Burns & Kelleher.

## Province of Quebec Marine.

The s.s. *Winnifredian*, which ran on the rocks at St. Marys Islands, near Quebec, in September, and sank, was refloated at the end of the month, by the Quebec Salvage & Wrecking Co., under the supervision of Capt. Kjerland. Compressed air only was used, the amount required being 133,000 cu. ft., fed at the rate of 2,090 cu. ft. a minute.

Bids were received Oct. 31, for the owners, by Davidson, Wainwright, Alex-

ander & Elder, solicitors, Montreal, for the purchase of the barge *E. H. Lemay*, with her cargo of about 221 tons of anthracite coal, and the barge *Lawrence C. Giff*, with equipment and any effects thereon, as they lie submerged in the St. Lawrence River near Wayagamac Island below Three Rivers, Que.

The Montreal Harbor Commissioners held their annual inspection of the port, Oct. 8, when a number of newspaper men were invited to see the many improvements which have been carried out, or are in progress there. The President, W. G. Ross, thanked the newspaper men for the silence which had been maintained during the war, on the extensions and improvements which had been made, to enable the commissioners to deal with extraordinary shipping which had passed through the port.

## Ontario and the Great Lakes.

The s.s. *David W. Mills*, which sank at Port Stanley, some time ago, has been raised and taken to Buffalo for examination and repairs.

The Landbo Transportation Co.'s s.s. *Landbo* was reported ashore on Goose Island shoal, near Mackinac Island, Lake Huron, Oct. 26.

The Great Lakes Transportation Co., Midland, is reported to have been awarded the contract for icebreaking in Thunder Bay and local harbors, for five years.

The s.s. *Senator Derbyshire*, owned in Montreal, en route from Ogdensburg, N. Y., to Chicoutimi, Que., with coal, Oct. 13, struck a shoal in the river, and was subsequently beached near Brockville.

Vessel traffic through the St. Marys River was practically suspended from 11 p.m., Oct. 16, to 11 a.m., Oct. 17, on account of a dense fog. Vessels anchored where they happened to be, until the fog lifted.

The Montreal Transportation Co.'s tug *Mary* sprang a leak, when running light between Montreal and Kingston, Oct. 18, and sank near Pine Tree Point, below Iroquois. The crew were saved, and as the vessel lies in a good position, it is not expected that there will be any trouble in salvaging her.

The Montreal Transportation Co.'s barge *Hamilton* sprang a leak while passing through the Welland Canal, Oct. 5, and returned to Port Colborne, where she unloaded her cargo of grain, 4,000 bush, of which are said to have been damaged. She left later for Buffalo, where she was drydocked for repairs.

Canada Steamship Lines' s.s. *J. H. G. Hagarty* struck an obstruction in Hay Lake, while heading for the West Neebish Passage, Lake Superior, Oct. 18, and sustained some damage, which caused her to list badly. She was taken to the Algoma dock and her cargo was lightered, as it was not considered safe for her to proceed on her downbound trip.

The Reid Towing & Wrecking Co., Port Huron, Mich., is reported to have ordered a steel steam tug to be built by the Foundation Co., at its Port Huron yard, which was taken over recently from the Reid Towing & Wrecking Co. The vessel, it is reported, will cost about \$300,000, and will be delivered during November, fully equipped and ready for service.

Surveys have been undertaken of the U.S. s.s. *Charles S. Price*, one of the vessels wrecked in Lake Huron during the great storm in Nov., 1913. Two days

were spent in examination early in October, but the s.s. *Brojate*, which was chartered for the job, had to return to Detroit, Mich., owing to bad weather. The vessel lies in 60 ft. of water, about 13 miles out from Sarnia.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for September as follows: Superior, 602.54; Michigan and Huron, 581.50; St. Clair, 575.77; Erie, 572.60; Ontario, 246.20. Compared with the average September levels for the last 10 years, Superior was 0.11 ft. below; Michigan and Huron, 0.86 ft. above; Erie 0.08 above, and Ontario 0.03 ft. below.

A press report stated recently that the ice breaking steamship *James Whalen* was about to be sold to the Great Lakes Transportation Co., Midland, for ice-breaking purposes in Thunder Bay. It was also stated that the Dominion Government had awarded a contract to that company for the usual annual icebreaking in the Bay. We were officially advised, Oct. 19, that no contract had been entered into with that company for ice-breaking on Thunder Bay, but that, with other companies, it had tendered, and being the lowest tenderer, recommendation for its acceptance had been made.

The appeal of Auditors & Co., Buffalo, N.Y., against the claim of Canadian Vickers, Ltd., for \$52,983.34, for work done on the s.s. *Susquehanna*, was dismissed in the Admiralty Court at Montreal Oct. 18. The appellants offered to pay \$32,000, and disputed items—profits \$16,544.89, and overhead charges \$13,157.20. The *Susquehanna* was one of the U.S. lake steamships which was divided in two at Buffalo for passage through the Welland Canal, and re-united and converted into a seagoing steamship by Canadian Vickers, Ltd. She was torpedoed subsequently and sunk by the enemy.

The Detroit & Windsor Ferry Co., on Oct. 20, gave notice of an increase in the rates of fare, pending a decision of the Government as to the granting of a new franchise. The Mayor has protested against the increase, and has asked the Government to disallow same. The increase provides for 8 tickets for 25¢, instead of 10, and commuters' tickets of 100 trips for \$2.25 instead of for \$1.50. The Windsor Ferry Co., Ltd., was incorporated recently, to operate a ferry service between Windsor and Detroit, and O. E. Fleming, K.C., is reported to have stated that this company had made arrangements for a landing place in Windsor, at the foot of Brock St. C. Millar, Toronto, is said to be interested in the new company.

The Marconi Wireless Telegraph Co.'s application for an injunction to restrain the Canadian Car & Foundry Co. from installing certain wireless telegraph apparatus on mine sweepers under construction at its Fort William, Ont., plant, for the French Government, was refused by Mr. Justice Bruneau at Montreal, Oct. 25. In delivering judgment, he is quoted as saying:—"The French Government wants these ships. It is a question of urgency. Any interference by this court in the manner asked would delay construction, equipment and delivery of the ships. The respondents may be made to account for what they have done—but later on, after the war. To grant this injunction would be, in my opinion, but nothing less than a crime against the French Government, without doing any practical good to the petitioner."

Basset Steamship Co., Toronto, is reported to have sold the s.s. *Mariska* to

Canada Steamship Lines, Ltd., for \$310,000. She was bought from the Pittsburgh Steamship Co. in 1913, and was built at Cleveland, Ohio, in 1890. She is of steel with double bottom for water ballast, steel boiler house, 3 watertight and 2 non watertight compartments, cargo hatches 24 ft. centers, and of the following dimensions: length between perpendiculars 291 ft., breadth moulded 40 ft., depth moulded 22 ft.; tonnage, 2,502 gross, 1,875 net. She is equipped with triple expansion engines with cylinders 24½, 38 and 61 in. diam. by 42 in. stroke, 1,200 i.h.p. at 80 r.p.m., and supplied with steam by 2 Scotch boilers 14 ft. long by 12½ ft. diam. at 160 lb. We have been officially advised that Canada Steamship Lines, Ltd., has not purchased the vessel, and have also been advised that she has been sold to J. E. M. Stewart, Toronto, and that she has been cut in two at Collingwood, for passage through the Welland Canal, to a St. Lawrence port, when she will be rejoined and placed in Atlantic service.

The Montreal Transportation Co. is reported to have sold the s.s. Paipoonge and the barge Thunder Bay to Cuban interests. The s.s. Paipoonge was built at Cleveland, Ohio, in 1888 and named Corona. She is of steel with double bottom for water ballast, 3 watertight and 2 non watertight bulkheads, steel boiler house, electric light, hatches 24 ft. centers, and has dimensions: length 292 ft., breadth 40 ft., depth 24½ ft.; tonnage, 2,517 gross, 1,634 net. She is equipped with triple expansion engine with cylinders 20, 38 and 61 in. diam. by 42 in. stroke, supplied with steam by 2 Scotch boilers 14 ft. diam. by 11 ft. long, at 180 lb. working pressure, developing 1,200 i.h.p. The barge Thunder Bay was built at Cleveland, Ohio, in 1895 and named Malta. Her dimensions are: length 302 ft., breadth 40.2 ft., depth 25 ft.; tonnage, 1,951 net. Both vessels will have to be cut in two to pass through the Welland Canal, and it is stated that this has been taken in hand, and that the vessels will be taken to the coast before the close of lake navigation.

### British Columbia and Pacific Coast.

The C.P.R. is reported to have chartered the steam tug Dola for its car barge service to Vancouver Island.

Navigation on the Yukon River closed Oct. 12, with the sailing of the last vessel of the season from Dawson for White Horse.

The C.P.R. s.s. Princess Adelaide, bound from Vancouver to Victoria, ran ashore at Georgina Point, Main Island, Oct. 13. The passengers were transferred to the company's s.s. Princess Alice safely.

The Dominion Public Works Department has filed plans at Vancouver, B.C., for the erection of freight sheds at the government dock there. The cost of the sheds is stated as \$120,000.

The Dominion Minister of Public Works is reported to have stated at Vancouver, Oct. 23, that \$250,000 will be placed in the estimates next year for dredging from the mouth of the North Arm of the Fraser River, to New Westminster.

The Pacific Steamship Co.'s s.s. Ravalli, which was considerably damaged by fire at Lowe Inlet, June 14, and salvaged by the Prince Rupert Dredging & Salvage Co., was towed into Vancouver, towards the end of September by the s.s. Georgia.

A contract for the repair of the vessel will be awarded shortly.

The Union Steamship Co.'s s.s. Camosun ran on the rocks at Brockton Point, Burrard Inlet, Oct. 1 and tore a hole in her bow above the water line. As she was running at slow speed on account of the fog, the damage was comparatively light. The 150 passengers were taken off by Vancouver firemen using their ladders, but the crew remained on board. The vessel released herself on the rising of the tide and her schedule is not being interfered with, at least, for a time.

It is announced that the dual position of Wreck Commissioner for British Columbia, and Examiner of Masters and Mates, Victoria, B.C., held for some years by Capt. J. D. Macpherson, has been abolished, and that he has been appointed Wreck Commissioner for British Columbia. Pending a permanent appointment, it is stated that Capt. Chas. Eddie, Vancouver, B.C., will conduct all examinations in connection with applications for certificates of competency as masters and mates.

The s.s. Beaver, which was acquired from the C.P.R. by the British Columbia Government, recently, is being overhauled and transformed into a ferry boat by the Star Shipyards and Westminster Iron Works, New Westminster. When completed she will be placed in service between Ladner and Woodward's. She was built at Victoria, B.C., in 1898, and is a steel vessel, paddle wheel driven by engine of 13 n.h.p. Her dimensions are: length 140 ft., breadth 28 ft., depth 5.1 ft.; tonnage, 545 gross, 344 register.

J. C. McIntosh, M.P. for Nanaimo, is reported to have stated that he has been assured by the Minister of Public Works that if a private company will undertake the construction of a dry dock at Esquimalt, the Government will assist the project under the act to aid the construction of dry docks. It is stated that a Vancouver company is anxious to build a dry dock in Vancouver, and to avail itself of the Government subsidies, but that the Minister has said that the first chance is to be given to Esquimalt.

J. P. Davies, Montreal, owner of the steam tug Salvor, is claiming \$20,000 for salvage services rendered to the Japanese s.s. Canada Maru, when she ran on the rocks at Cape Flattery recently. The tug was owned by the British Columbia Salvage Co., and it is claimed that she was sold and the money paid over, on the day the Canada Maru casualty occurred, and prior to the call for assistance. The Salvor has been transformed into a freight carrying vessel for service between the B.C. coast and Australia.

The repairs necessitated to the Japanese s.s. Canada Maru, which was wrecked at Cape Flattery recently, and which are being done by Yarrows, Ltd., Esquimalt, cover extensive damage forward. About 35 plates have been removed, renewal of the fore foot, straightening of a considerable number of frames, repairing tank tops, etc. The bottom damages are so great that it is impossible for the keel to rest on the blocks, and the vessel has had to be shored up with iron clad timbers wedged under the overlapping plates on either side. The keel forward will be replaced in sections.

A Mercantile Marine Ensign has, according to an Ottawa press dispatch, been adopted for the steel cargo vessels being built for the Dominion Government, and it is said that it will consist of the Union Jack, with the beaver and an anchor.

### The Salvaging of Wrecked Vessels.

Salvaging has been carried on by British wrecking companies on an unusual scale during the last four years. Much more progress has been made in raising sunken tonnage in the vicinity of the British Isles than most people are aware of. More than half of the British ships sunk by submarines in the last 30 months have been raised and restored to service, according to a conservative estimate. Figures given out by a British authority place the number of ships salvaged by the Admiralty Salvage Department at 260 for the period from 1915 to 1917, all of which were of big tonnage. For the first five months of 1918, there were 147 vessels raised, bringing the total since 1915 to 407. These figures exclude ships raised outside British waters.

Regarding the development of salvage activities in American waters, The New York Journal of Commerce is sceptical of extensive work being undertaken. In the opinion of U.S. shipping men, new shipping is being produced at such comparatively cheap rates that it offers a serious competition with wrecking as a means of producing tonnage quickly. The field for such work on the American coast is, of course, much less fruitful for wreckers than is that on the other side of the Atlantic.

After the first few months of the war the demand for tonnage became so great, and values so tremendously expanded that numerous wrecking and raising enterprises were undertaken in all parts of the U.S. coast, Great Lakes and inland rivers; of vessels which had long been abandoned because the cost of raising them was greater than they were worth, but in wartime became practicable. Some of these jobs attracted much attention at the time, and netted the speculators handsome profits, besides showing them many a new wrinkle in operating methods.

But today available wrecks are not plentiful, within depths of water which can be worked, and inquiry among wrecking concerns shows little disposition to undertake work abroad. Europe has plenty of wrecking concerns to attend to all available materials, they say. It is true that U.S. companies have, in some favorable cases, undertaken work in foreign waters, but most of the sinkings have been in water too deep to permit operation by any methods at present employed.

The limit for a diver of the ordinary type and physical capacity is less than 100 ft., and those who can go down in depths of 150 ft. are very rare. Work of that character is necessarily expensive and limited to very short periods, entailing long drawn out operations to accomplish anything. There have been attempts made at the construction of diving suits of metal, with mechanically jointed shoulders, elbows, knees, etc., and hook "fingers," but, as one of the largest wrecking companies put it: "We are from Missouri in that respect 'till they show us that they will work right, and they haven't done it yet. When they do, we are willing to adopt them."

Something has been done along the line of using huge electro magnets for lifting ships, but professional shipwreckers are not enthusiastic about them. Heretofore it has been considered as impracticable to lift any hulk of more than 1,500 tons with ropes passed under her keel, but the increased incentive has lately resulted in almost doubling this weight, and with the use of pontoons working the load into shallow water. Wreckers admit that in America there has been less development

of novel methods than in England, principally due to the lack of material on which to work and consequently absence of incentive.

While a ship comparatively easily raised still offers large returns to the salvage contractor, the rapid development of shipbuilding—or ship manufacturing, to be more exact—is making the speculation with all its attendant risk of complete failure less alluring every day. At best, wrecking at sea—and most of the sinkings have been in exposed places—is uncertain. At the very minute when success seems assured a heavy gale or storm or a high sea may undo in an hour the preliminary work of weeks and all the expenditure is wasted. It is this which makes wrecking companies exact heavy rewards on uncertain problems and takes away the attractiveness of lifting old hulls.

The St. John Steamship Co., Ltd., has been incorporated under the New Brunswick Companies Act, with \$49,000 authorized capital and office at St. John, N.B., to own and operate steam and other vessels, and to carry on the general business of steamship owners and merchants. The incorporators are, J. G. Harrison, A. L. Fowler, and T. E. G. Armstrong, all of St. John. The company is reported to have a steamship under construction at Yarmouth, N.S., for Bay of Fundy service. Formation of the company and the order for the new vessel are said to have been determined by the fact that owing to the sale of packet steamboats formerly on the Minas Basin route, and the withdrawal of the vessels from that service, communication between St. John with important Nova Scotia centers by water was interrupted and local merchants put at the disadvantage of competing with Halifax over a long rail route.

**English Channel Car Ferry System.**—Among the many things which the war has brought into being, and which have been matter for discussion for years, is a car ferry system between England and France. Low ferry boats, specially built for the purpose, are being used, and cars from English railways are run on board and transferred to the French railway system, and thence to their destinations. The service is under government control, and is said to have proved its value. The difficulty of transferring the cars to and from the ferries at all stages of the tide, which is said to have held up several previous schemes, has been overcome. It is expected that this, or a similar system, will be continued after the war, until the channel tunnel, which is now practically assured, is built.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—The last of the steel cargo steamships under order by the Imperial Munitions Board for the British Government, was launched at this yard, Oct. 5, and christened War Horus by Mrs. James Conmee. This vessel has a deadweight capacity of 3,400 tons, and it is expected that she will be ready for sea well before the close of lake navigation.

In the agreement between the U.S. Government and the Western Union Telegraph Co., under which the company's lines are being operated by the U.S. Post Office Department during the war, the government, according to a press report, undertakes to pay all interest on outstanding bonds, all dividends and interest due on stocks and bonds of subsidiary companies, all taxes and operating charges, and in addition, \$8,000,000 a year.

## Mainly About Marine People.

G. F. Moore, Sydney, N.S., has been appointed shipping master for the port, vice M. McKinnon, resigned.

S. McClay, one of the Vancouver Harbor Commissioners, has been elected a director of the American Association of Port Authorities.

Sir Arthur Harris, Director General for Canada, British Ministry of Shipping, left Montreal, towards the end of October, on a trip to the Pacific coast.

James Carruthers, President, Canada Steamship Lines, Ltd., Montreal, has been elected a Canadian director of the London, Liverpool & Globe Insurance Co.

F. D. Geohegan has been appointed Eastern Passenger Agent, Northern Navigation Co., Sarnia, Ont., to assist the Manager in the Passenger Department.

Lieut. Col. F. A. Gascoigne, D.S.O.,  
Secretary-Treasurer, Canadian Pacific Ocean Services, Limited.

James Carruthers, President, Canada Steamship Lines, Ltd., has given the Western Hospital, Montreal, securities valued at \$50,000, yielding an annual revenue of \$3,000.

G. W. Crossan, heretofore Surveyor, Naval Service Department, has been appointed Assistant Works Manager, Engineering Department, Halifax Shipyards, Ltd., in charge at present of all repairs to engines, boilers and machinery.

J. H. Price, formerly General Manager, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C., is now Managing Director of Kiernan & Kern shipbuilders, Seattle, Wash., who are building wooden steamships for the U.S. Emergency Fleet Corporation.

Capt. Norman Mackay, master of the Canadian Northern Ry. car ferry Canora, which left Lauzon, Que., for the Pacific Coast, recently, was presented with a gold watch by the builders, the Davie Shipbuilding & Repairing Co., before leaving.

James Playfair, President and General

Manager, Great Lakes Transportation Co., and Vice President and General Manager, Midland Shipbuilding Co., Midland, Ont., celebrated the 29th anniversary of his wedding, Oct. 25, by launching the first steel steamship to be built at Midland.

E. W. Holton, heretofore General Passenger Agent, Northern Navigation Co., Sarnia, Ont., has been appointed General Freight Agent in charge of Freight Traffic, with office at Sarnia, Ont., and the Passenger Department has been placed under the supervision of the Manager, H. H. Gildersleeve.

Capt. R. D. Foote, commodore of the Northern Navigation Co.'s fleet on the Great Lakes, has retired after over 50 years service on the lakes, 35 of which have been spent with the Northern Navigation Co., and its predecessors. He has been master of the s.s. Noronic since she was built in 1913, and prior to that was master of the s.s. Hamonic from her maiden voyage.

Lieut.-Col. F. A. Gascoigne, D.S.O., who has been appointed Secretary-Treasurer, Canadian Pacific Ocean Services, Ltd., Montreal, was born at Gosport, Hants, Eng., Apr. 2, 1866, and entered Canadian railway service May 18, 1883, since when he has been, to Aug., 1884, car checker and general clerk, C.P.R., Brockville, Ont.; Aug., 1884, to Aug., 1891, record clerk, foreign mileage clerk, and statistical clerk, Car Accountant's office, C.P.R., Montreal; Aug., 1891, to Feb., 1903, chief clerk, Car Service Department, C.P.R., Montreal; Feb., 1903, to May 31, 1909, Car Accountant, C.P.R., Montreal; May 31, 1909, to May, 1915, Superintendent, Car Service, Eastern Lines, C.P.R., Montreal. As commanding officer of the 3rd Victoria Rifles, he took an active part in recruiting in the early stages of the war, and in May, 1915, he was appointed to command and organize the 60th Battalion, which he took overseas, serving with it for two years, and receiving the Distinguished Service Order.

The Cunard Steamship Co. announces that it has made arrangements for taking over the general passenger agency of the Toyo Kisen Kaisha, the third largest steamship company in Japan, and operating steamships between Japan and Pacific coast ports, calling at Honolulu. The agency in Great Britain was held formerly by the Southern Pacific Co., but on the taking over of the company by the U.S. Railroad Administration, it was found to be impracticable to continue the arrangement. This change in agency has given rise to another rumor in connection with possible amalgamations of, or absorptions by, British steamship companies.

G. W. Crossan, heretofore surveyor, Department of Naval Service, is reported to have been appointed Marine Manager, Halifax Shipyards, Ltd., Halifax, N.S. He was for some time engaged in navigation on the Great Lakes, and since the commencement of the war has taken several vessels overseas. He served his apprenticeship in Clyde shipyards, Glasgow, Scotland, and has been chief engineer of several vessels. He was for some time resident in Toronto.

A. D. Swan, engineer of the Marine Department, arrived in Vancouver, from Ottawa, Oct. 21, to undertake an examination of the port, and report to the Minister of Marine, as to improvements required to enable the rapidly increasing traffic to be dealt with adequately.

## Single Screw Steel Mine Sweepers for French Government Built at Fort William.

As first announced in Canadian Railway and Marine World for March, an order to build 12 mine sweepers for the French Government was given the Canadian Car & Foundry Co. in February last, being placed by the French Military Navy Department of the French High Commission to the United States. The company decided to build them at its Fort William.

water level and the grade of the plant of approximately 40 ft. It was decided to build the vessels adjacent to the plant, rather than close to the water, and then to move them to the water's edge by special means. For the building of these vessels the company erected, adjacent to its main car plant, a separate building, divided into 6 building berths. This build-

ing the double line of tracks, and for the transfer table to the river. The hull was then moved farther toward the river, by a locomotive and cable, until it had crossed Montreal St., the Grand Trunk Pacific Ry., and the Fort William Municipal Ry. Immediately after the crossing of these tracks, the incline to the water commences, being about an 8% grade. At this point another locomotive was attached by a cable, and the hull from there on descended to the river by its own weight, but was held in check by the cable fastened to the bow end, and which in turn was attached to the locomotive with a short string of cars, and by means of the air brake on the locomotive the hull was allowed to descend or be stopped at will. The river bank was excavated for this grade, and also deep enough to form a slip in from the river, and the railway tracks were laid practically to the river bank, so as to allow the trucks to go right into the water. Immediately they descended into the water deep enough, the hull floated off the cradles and they were then pulled back for future use.

The first of the 12 vessels was launched July 29 and the last on Oct. 14. Their names are: Navarin, Mantoue, Saint Georges, Leoben, Palestro, Lutzen, Bautzen, Senef, Cerisoles, Sebastopol, Malakoff, Inkerman. Three of the vessels have been thoroughly tested and delivered to the French Commission, having met all requirements in reference to speed, coal consumption, etc.

The mine sweeper Mantoue, while downbound Oct. 26, collided with the car ferry Bessemer, during a severe fog on Lake Erie. Both vessels were somewhat damaged, and the Mantoue put in at Cleveland, Ohio, to await further instructions before proceeding on her voyage to the Atlantic.

The Canadian Northern Ry. Car Ferry Canora, left Quebec, Que., Oct. 1, on her

Mine Sweeper for French Government, leaving building, on cradles and trucks, for transfer table.

Ont., plant, and estimated that an assembly plant and launching facilities could be provided there for \$250,000. The vessels have the following general dimensions, etc.:

Length, over all .....	143 ft.
Length, between perpendiculars .....	135 ft.
Breadth, moulded .....	22½ ft.
Depth, moulded to main deck .....	13½ ft.
Depth, moulded to quarter deck .....	11½ ft.
Displacement, loaded .....	630 tons.
Freeboard, Lloyds .....	15 in.

They are of the single screw, steel steam trawler type, and are built to the full requirements of Lloyd's register, class 100 A1 steam trawlers, single deck, with raised quarter and fore-castle decks and steel deck house. The top of the boiler house and winch casing form the navigating bridge, on which is a steel house containing the captain's room and wheel house. On top of the deck house aft is a steel house for the wireless telegraph operator, with platforms at sides for lifeboats. Two pole masts of Oregon fir are fitted, the foremast stepped in cast housing on the main deck, and the main mast is housed by the deck house aft. Steam steering engines are installed in the upper engine rooms. Included in the deck machinery equipment are: double cylinder, 2 drum steel trawl winch, with reversing engines; double cylinder, single drum, steam hoister, with non-reversing engines, and a steam windlass.

The system adopted in building and launching these vessels was unique. The company's main car shop at Fort William is approximately 1,000 ft. from the Kaministiquia River and there is a difference in the elevation between the

ing is of steel and concrete construction and is served with overhead travelling cranes to facilitate the application of the steel.

After a hull was completed it was sup-

Mine Sweeper for French Government, on transfer table.

ported on 2 cradles, which were carried by 4 specially constructed trucks, as shown in one of the accompanying illustrations. The hull was then pulled out of the building, by a locomotive and a cable, on to a transfer table, as shown in another of the accompanying illustrations, allowing the hull to be moved sideways in either direction to line it up with

long trip to British Columbia, via the Panama Canal. She is expected to arrive about the middle of November, after which she will take up her service between Port Mann, on the south side of the Fraser River, and Patricia Bay, Vancouver Island. She is in charge of Capt. Norman McKay, Owen Sound, Ont., with W. Byers as chief engineer.

# Vancouver and Prince Rupert Harbors in British Columbia.

By S. McClay, one of the Vancouver Harbor Commissioners.

In the establishing, on a successful working basis, of a port of any magnitude, certain factors must exist, natural and acquired. As a foundation, the location must have behind it a territory in which is found population, natural re-

Capt. George Vancouver, R.N., commanding H.M.S. Discovery, which, accompanied by the armed tender Chatham, left Falmouth April 1, 1791, and for the following 4 years followed exploration and discovery work, in the course of which the

discoveries on the northwest coast of America. She sailed from England with 150 men on board, and such was the attention of the officers to their health that only one died in the course of a very fatiguing voyage of four years. They speak in the highest terms of the inhabitants of the Sandwich Islands, from whom they experienced every possible civility and attention."

For nearly a century after its discovery Vancouver remained a small settlement, its surrounding waters being devoted to only local uses, although Burrard Inlet (its inner harbor) was surveyed by Capt. Richards, of H.M.S. Plumper, in 1859-60. In the early eighties the Canadian Pacific Ry. saw the value of the harbor as the western terminal of the first Canadian transcontinental railway, and in 1886 completed its line to the point. The city was then incorporated and the name Vancouver given to it, in honor of the man who, 94 years previously, discovered the harbor. Since the incoming of the C.P.R. the development of the city and port has been phenomenally rapid. The survey of the harbor, which was made by Capt. Richards in 1860, was revised in 1891 by a thorough survey under the direction of W. J. Stewart of the Dominion Hydrographic Department.

The harbor of Vancouver is described in ancient Admiralty records as "the first great harbor that indents the coast of British Columbia." It is located on the easterly side of the Straits of Georgia, some distance north of the 49th parallel, and a few miles northeast of the point where the flood of the Fraser River pours into the straits. The limits of the harbor are particularly described in an act of the Dominion Parliament as follows: "The harbor shall include Burrard Inlet, with the North Arm and Port Moody, False Creek and English Bay and all

Mine Sweeper for French Government, going down incline railway toward the slip excavated in from Kaninistikwia River.

sources and industrial development of such a character as to provide stable sea going trade. Before it must lie a territory which may be reached by the water route economically and afford a reciprocal market. The harbor itself must be located so as to afford natural protection for large vessels under advantageous conditions. Upon this foundation must be established rail and subsidiary coastal water connections which thoroughly tap the territory behind the harbor, and the natural location must be properly developed, either publicly or privately, by the provision of equipment for the prompt and economical handling of the water borne business of the port.

All of these conditions are found at Vancouver in a remarkable degree, and because of this fact the development of the point as a port has been phenomenally rapid, its position at present being such as to constantly attract with increasing force the attention of the great world interests. Largely as a result of the development of its business as a port, the city has grown from its scattered population of a few hundred in 1885 to its present position of the fourth city of Canada, having urban and suburban population of approximately 175,000. As a port, Vancouver today more than rivals Montreal, where systematic port development work has been carried on for years, and the outlook for Vancouver becoming one of the great seaports of the world is not by any means visionary. In the opinion of many who are able to speak with authority, such a future is absolutely assured.

History.—The discovery was made by

harbor was for the first time visited by white men. The return of the vessel to home ports, noted in the Annual Register for 1795, under date of September 24, is

Cradles and trucks for launching mine sweeper for French Government, at Fort William.

as follows:—"The Discovery, sloop of war, Capt. Vancouver, arrived at Limerick on the 13th inst. in company with the homeward bound East India fleet, having completely effected the object of her expedition, and made some important

other tidal waters lying east of a line drawn from the Point Atkinson lighthouse southerly to the most westerly point of Point Grey."

English Bay, which may be termed the outer harbor, is an enclosed body of

water, having a uniform width of 5 miles, and extending from the Straits to Prospect Point; it forms the entrance to the central harbor, a distance of 6 miles. The depth of this portion of the harbor is from 50 to 60 fathoms at its entrance and 5 to 6 fathoms near the shores. This section is sufficient for the accommodation of extensive shipping. Up to the present, however, it has been but little used for the purpose, owing to the far more advantageous location afforded by the central harbor as hereafter described. English Bay is, however, so naturally located as to lend itself admirably to development work, which will make it an ideal location for port business, and, in the opinion of the writer, will, as the port develops, become the most important part of the harbor.

The central harbor is reached through First Narrows, where a channel 900 ft. wide (now being developed to a width of 1,400 ft.) exists, the depth being from 35 to 72 ft. at low water. The central harbor extends from First Narrows to Sec-

ond Narrows, a distance of 5 miles, with a maximum width of  $2\frac{1}{2}$  miles, and affording a depth of from 9 to 10 fathoms. It is in this section of the harbor that the greater part of the business as a port is carried on.

**Burrard Inlet.**—East of the central section, Burrard Inlet extends to Port Moody, a distance of about 9 miles, with a tributary inlet, the North Arm, extending for some distance to the north from Barnet. This section of the harbor may be termed the industrial section, as its shores offer adequate sites for the establishment of industries, which, on the south side, have the advantage of both rail and water transportation. Already many thriving industries are located in this section. These same remarks apply to False Creek, an arm of English Bay, extending east from Prospect Point, a distance of several miles, on the shores of which some of the principal industries of the city are now operating.

The natural location of Vancouver harbor is all that could be desired view it from whatever standpoint one may. This fact has led both harbor experts and after dinner speakers to declare it "one of the best natural harbors in the world." It is perfectly sheltered, and the locality is free from periodical disturbances, such as cyclones, hurricanes, and even heavy winds. The greatest wind velocity ever recorded is 30 miles an hour, and the

average hourly velocity for the last three years is reported as follows: 1915, 4.5; 1916, 4.6; 1917, 4.4. Even should a hurricane develop, the location of the inner harbor (which is three-fourths of the entire area) is such as to afford perfect shelter under such trying conditions.

The harbor is open all the year round,

the question of ice as an impediment to its use in winter being a factor which need not be considered. The status of Vancouver as a winter port is unique in Canada, as it affords a water borne export outlet at a time when all other ports of the Dominion are either tied up or operated under great difficulties, owing to weather conditions. The prevailing temperatures for the last three years are reported as follows:—

1915—Maximum, 89.5 (August); minimum, 22.9 (December). Average, 51.36.

1916—Maximum, 82.9 (June); minimum, 6.0 (January). Average, 47.2.

1917—Maximum, 82.6 (July); minimum, 10.3 (January). Average, 48.8.

The area of the harbor is so great and

minion of Canada for water-borne shipments. It is also within 25 miles of the International Boundary Line, its location for port purposes being one of the facts borne in mind by United States transcontinentals when establishing terminals at the point. Its situation with reference to Panama Canal traffic is advantageous, as it is the first Canadian port on the Pacific in relation to this great transoceanic shortcut.

**Rich in Resources.**—Back of Vancouver stands a country with an area of nearly 4,000,000 square miles, which looks to the port as its natural Pacific outlet. Wonderfully rich in natural resources (the full measure of which has not yet been even approximated), rapidly advancing in population, already established as one of the great grain growing districts of the world, making rapid strides along every line of industrial development, this territory covers a wonderful field. The port is connected with every portion of the settled districts of this great area by the Canadian Pacific, Canadian Northern, Grand Trunk Pacific and Pacific Great Eastern Railways, all of which have terminals in Vancouver. To this must be joined the business coming from the U.S. over the Great Northern, Northern Pacific and the Chicago, Milwaukee & St. Paul Railways, all of which have either established terminals or connections with the port. Such is the truly wonderful field which stands behind Vancouver as a port.

Before the city lies the Orient—a fruitful field, as yet only partially developed—the islands of the Pacific and Australia, with all of which the port carries on business. Nor is the story yet all told, for Vancouver claims as a port a far wider field than the Pacific. Previous to the war, water borne shipments were carried on regular callings at the port to the Old Country, via the Mediterranean and the Suez Canal; and the possibilities opened up by the Panama Canal will undoubtedly still further strengthen its hold and widen its field of service to points upon both shores of the Atlantic.

**Advantages of the Port.**—One of the principal factors in port development is the provision of both rail and water cargoes in either direction, as the running of empties or voyages in ballast are not economic operations. Vancouver offers advantages in this line which are just now being fully brought out, mention concerning which I may well make at this point. For years the problem of transporting the immense grain crop of north-west Canada to its natural destination (the old country) has been hedged with difficulties, owing to transportation on the Great Lakes being closed during the winter. As a port which is open all the year round and affording direct connection with England via the Panama Canal, the advantages of Vancouver for such shipments were pointed out. Objection was made as to the danger of the grain deteriorating when shipped in bulk on account of the long voyage and the passage through the tropics. Last year, however, a trial shipment of 100,000 bush. was sent by this route. The experiment was closely watched by the government authorities, whose report on the trip was made recently. This report shows that the cargo contained 15% abnormal moisture when it left Vancouver in Nov., 1917, but that it reached London in Feb., 1918, in first-class condition, and was accepted as such by the consignees. This shipment proves beyond all question the possibilities of Vancouver as a port for the shipment of

Single screw mine sweeper Navarin, built at Fort William for French Government.

its depth so ample as to allow free navigation under any conditions. The bed is chiefly a blue clay formation, which assures a good anchorage. The situation is such as makes it possible, when wharves are congested, to load or discharge cargoes from scows or lighters in the stream with perfect safety. Tidal conditions are also favorable, the greatest rise recorded in 24 hours being 16 ft., with a minimum report of 8 $\frac{1}{4}$  ft., and an average rise and fall of less than 12 ft. The harbor is practically free from submerged rocks, shoals and other dangers to navigation, such as are a handicap or a source of enormous expense to so many harbors.

**Strategical Position.**—I have previously mentioned the location of many thriving industries on the harbor foreshore, a point of manifest economic value in the operation of such plants. Vancouver harbor is well suited for this purpose, as, out of its entire 98.4 miles of waterfront, there is practically none which is not suitable for either industrial or commercial purposes. The importance of the port of Vancouver should not be underestimated. I have briefly outlined its natural advantages, and will now hurriedly review the field which it serves and the possibilities which lie before it.

From the standpoint of world trade the port of Vancouver is located in a strategical position. It is today practically the only Pacific gateway for the entire Do-

grain in bulk from the Canadian north-west to the old country.

Other illustrations as to the possible development of Vancouver as a port because of the Panama Canal short-cut are afforded when it is stated that water borne shipments of shingles may be made by this route from Vancouver to Boston, at 40c per thousand, and that a 40 lb. box of British Columbia apples may be shipped in cold storage by the route for 25c—less in each case than the delivery cost of the single unit within the Boston city limits.

**Tonnage Statistics.**—As showing the present standing of Vancouver as a port, I present the following figures as to tonnage for the fiscal years ended Mar. 31:—

	1917.		
	Vessels.	Tonnage (gross)	
Foreign, inwards .....	1,520	2,041,859	
Foreign, outwards .....	1,392	1,731,629	
Coastwise, inwards .....	9,493	3,356,050	
Coastwise, outwards .....	9,793	3,629,551	
Total .....		10,735,089	
	Vessels.	Tonnage (gross)	
Foreign, inwards .....	1,449	1,890,873	
Foreign, outwards .....	1,369	1,392,141	
Coastwise, inwards .....	9,993	3,549,997	
Coastwise, outwards .....	10,206	3,906,196	
Total .....		10,639,507	

In May, 1913, the Dominion Parliament placed Vancouver harbor under the control of a harbor commission, consisting of a president and two commissioners. Authority was given this commission to establish regulations for the government of shipping in the harbor and to exercise control on the foreshore, as well as appoint a staff to carry out these rules. This work has been done in conformity with the practice observed in the best regulated harbors of the world.

**Reinforced Concrete Wharf.**—In addition to the regulation and control exercised by the harbor commission, it also directly operates one of the finest public wharves on the Pacific Coast. This wharf is located on Burrard Inlet, in the heart of the central harbor. The wharf is of the reinforced concrete type of construction, a new method on the Pacific Coast being employed in the work, involving the use of cribs reinforced with concrete and a heavy mass wall of concrete. The wharf is 800 ft. long and 300 ft. wide, and so located as to give a depth of 35 ft. at low tide. On the wharf are 2 sheds, with trackage on each side, the easterly being 676 ft. 10 in. long and 78 ft. 8 in. wide, and the westerly 843 ft. long and 97 ft. 9 in. wide. This shed is provided with a depressed track. There is a steady demand for accommodation at this wharf, and during the past year the harbor commission has been compelled to turn away business from it, owing to the berths being occupied or storage accommodation being completely taken up.

Adjoining this wharf is a Dominion Government grain elevator which has a capacity of 1,250,000 bush. The receiving capacity is 20,000 bush. an hour and the loading capacity 60,000 bush. an hour, the plans providing for this loading being carried on for 4 vessels at one time. The equipment also includes a sacking plant, capable of handling from 3,000 to 5,000 bush. an hour.

**Fostering Industrial Development.**—The harbor commission judges that the fostering of industrial development comes within its field, and has, to that end, reclaimed 33.13 acres of land in False Creek. This was done in 1917, the reclamation being accomplished by dredging in the waterway; 971,457 cubic yards of material were used, and the reclamation work cost 14c a square foot. The harbor

commission named the tract Industrial Island, and has divided it into 3 zones, offering the sites to industries on 21 years leases, with privilege of renewal for two additional terms. Zone A contains 11.24 acres, and fronts on the main channel, with 20 ft. of water at low tide, the annual rental here charged being \$1,500 an acre. Zone B, 11.35 acres, with 12 ft. of water, rents for \$1,000 an acre per year, and Zone C, 5.60 acres, which has only trackage facilities, rents at an annual payment of \$800 an acre. The harbor commission's plan of granting to industrial plants practically permanent leases on a ground rental basis has been heartily welcomed, and over half of the property has already been leased, with many industries now in operation.

I have previously mentioned the numerous industries which have been established on the shores of the port of Vancouver. It is fitting, however, that special mention be made of the shipbuilding industry, which has developed at the point during the last year, inasmuch as it is indirectly a feature of port development, as it provides tonnage at a time when there is a crying demand for carriers for water borne shipments on the Pacific. On the shores of the port, 4 shipyards are now operating. From these were launched during the past year vessels aggregating 98,200 tons, with operations still under way on other vessels. J. Coughlan & Sons shipyard has launched 4 steel vessels, each of 8,800 tons, these being the largest vessels ever launched from a Canadian shipyard. The Wallace Shipyards has launched 3 steel ships, each of 4,800 tons, and 6 wooden vessels of 2,500 tons each. At the Wm. Lyall Ship-Building Co.'s plant 6 wooden vessels of 2,800 tons each have been launched, while the Western Canada Shipyards has made a similar contribution to the tonnage of the Empire.

**Future Needs.**—While the harbor commission has already done valuable work in developing the port business of Vancouver along many lines and putting port affairs on a sound working basis, it is admitted that there is much which still remains to be done in the line of provision of equipment, etc., to adequately prepare the port for its future needs. The harbor commission recently took up with the Hon. C. C. Ballantyne, Minister of Marine, many questions of this character. The minister showed a hearty interest in the development of the port, as to the future of which he has no doubt, and promised hearty co-operation in the plans outlined. The first step of the programme agreed upon is now under way in the sending of an expert harbor engineer to the coast to look over the situation and recommend to the Ottawa authorities a systematic policy of extension as to improvements and equipment designed to cover the demands of the port for the next 15 years. It is with genuine pleasure that I record this progressive policy of the minister, as all connected with port development know that in this field it is necessary to plan several years ahead in order to properly meet demands as they arise.

**Prince Rupert Harbor,** the northern port on the mainland of British Columbia, is located in latitude 54° 20' N. and longitude 130° 20' W. The place came into prominence as a city and a port when the Grand Trunk Pacific Ry. made it the Pacific terminus of its transcontinental. The name was given in 1906 as a result of a suggestion contest, arranged by the G.T.P.R., in which 12,000 names were suggested, the winner of the prize being

Miss Eleanor M. MacDonald, of Winnipeg. The name is suitable, as it places on the map of the Pacific Coast the name of the dashing cousin of King Charles II. and the first Governor of the Hudson's Bay Company. After the accession of King Charles II., Prince Rupert (an illustrious soldier and explorer) joined the Duke of Albermarle and others on the discovery of a supposed passage through Canada to the South Seas, and in June, 1668, dispatched two vessels to Hudson Bay for the purpose. The outcome of this expedition was the granting in May, 1670, of a Royal Charter to Prince Rupert and others under the title, "The Honorable Company of Gentlemen and Adventurers Trading to Hudson's Bay," the concern being known throughout the world as the Hudson's Bay Co. This charter gave the sole right to trade and proprietorship in an enormous area of what is now Canada, termed Rupert's Land.

Prince Rupert harbor is large and commodious, and affords a perfect shelter for large vessels. It is entered from the north by Chatham Sound, from the south by several channels, and from the Pacific by Dixon Entrance and Brown's Passage. The harbor proper is about 10 miles long, and varies from half a mile to 2 miles in width. A survey shows a depth of 20 fathoms north and east of the town site, from 17 to 23 fathoms opposite the point and about 6 fathoms at the wharves. Tidal conditions in the harbor are favorable for port purposes. The tide rises from 17 to 24 ft. at alternate spring tides and 16 ft. at neap tides, making an average rise and fall of tide of 15 ft.

Up to the present the business of this port has been chiefly coastwise, the Grand Trunk Pacific operating a fleet, with regular sailings, to the Queen Charlotte Islands, Alaska, Vancouver and other southern ports. The port is the center of a large business in fish and lumber, having played an important part in the win-the-war programme through its handling of enormous quantities of fresh fish, as well as spruce for aeroplane construction.

The port is provided with a floating drydock with a lifting capacity of 20,000 tons, particulars of which may be outlined as follows:—

	Length,	Lifting capacity,
Dock, over all .....	600	20,000
	feet.	tons.
Middle section .....	270	10,000
Each end section .....	165	5,000
Middle and end section .....	435	15,000
Two ends .....	330	10,000

With this drydock is connected a thoroughly modern machine shop and equipment, including a 15-ton travelling crane. The entire plant, covering 17 acres, was constructed by the Grand Trunk Pacific Ry. at a cost of approximately \$2,500,000.

Prince Rupert harbor is not yet directly controlled by a harbor commission, its development being under the direction of the Marine Department. A large number of private wharves have been constructed, and the Dominion Government maintains a lighthouse depot, with wharves and full equipment. The British Columbia Government has provided a wharf, 600 ft. long, accommodating vessels of 25 ft. draft, which is equipped with sheds, etc. The Grand Trunk Pacific is about to start work on the construction of an ocean wharf, 1,000 ft. long, and equipped with storage sheds and modern equipment, for the handling of cargoes.

The total tonnage entered and cleared at this port during the fiscal years for 1911 to 1912 was 1,656,489 tons.

The foregoing paper was read before the American Association of Port Authorities in Boston recently.

# Air Syphon Blowers for Rivet Furnaces in Shipyards.

The use of high pressure air for rivet furnaces in a great majority of shipyards is not only overtaxing the capacity of the air compressor plants in many cases, but is resulting in a waste of power that does

multiple nozzle arrangements, in which a very small high pressure air jet (less than  $\frac{1}{8}$  in. in diameter for an ordinary rivet heater syphon) discharges through an injector tube drawing in a small quantity of free air. The first injector tube discharges into a second one, forming a second syphonic action, etc., which is carried on through successive stages where high pressures are to be reduced to relatively low ones.

The accompanying cross sectional sketch, fig. 1, shows a simplified design of a two-stage rivet furnace blower which

Figure 1.

not seem to have been generally appreciated. In a yard where 25% or 30% of the total air supply, compressed to 100 lb., is used to support combustion in rivet heaters at a pressure of less than  $\frac{1}{2}$  oz., the loss of power is readily apparent.

A large percentage of the high pressure air now used for this purpose can be saved by the application of a jet syphon to the air connection near the rivet furnace. The high pressure air, passing through the nozzle of the syphon, draws in a liberal quantity of free air, which is mixed with the initial air, and delivered to the furnace with it. The percentage of induced free air taken in under fixed conditions, depends entirely on the more or less correct design of the syphon blower, and runs from 30% in some of the crude arrangements which have been

is suggested in the interest of economy in construction, and fig. 2 shows its ap-

Figure 3.

plication to a rivet furnace. In this design a standard  $1\frac{1}{4}$  in. screwed pattern,

Figure 2.

improvised by some of the shipyards, to 75% or 80% for the best standard makes of syphons, which have been carefully tested by the Emergency Fleet Corporation's Standard Practice Branch.

The higher efficiencies are obtained by

cast iron T is used for the body of the instrument. The self-contained cast brass nozzle arrangement is screwed into one end of the T and provided with threaded connection for high pressure pipe, while the delivery tube, connecting the body

to the furnace, is screwed into the other end. In order to give rugged construction and further economize in production, a short piece of standard pipe is used for the delivery tube, and the correct syphonic proportions are obtained by the insertion of a non-corrosive lining. If the nozzles are properly proportioned, blowers of this design will give thoroughly good results.

Syphon blowers of the very highest efficiency can be obtained from regular manufacturers. It is quite likely that patterns and tools will be developed by some of these manufacturers for the production of the simplified instrument illustrated herein, provided there should be sufficient demand for them, and in this case the tubes would no doubt be carefully developed for highest efficiency.

The average air used by a rivet furnace runs from 20 to 40 cu. ft. a minute. A properly designed syphon blower will easily reduce the high pressure supply to 25% of the total, utilizing 75% of free air in the furnace. Figuring the average furnace air supply at 20 cu. ft. a minute, the saving effected would be 1500 cu. ft. of high pressure air a minute, or approximately 250 h.p. for each 100 rivet furnaces in operation.

A few ship yards have made some progress in the application of the syphon blower principle to rivet heaters, and some manufacturers are furnishing heaters with syphon attachments, but so far as these have been observed and tested, they have not been designed for high efficiency, and as the matter stands it seems that even the few yards that have taken steps in this direction have not taken full advantage of the opportunity. The cost of these blowers in any case is so insignificant, in comparison with the

saving effected, that it is a great waste to use anything short of a thoroughly efficient instrument. It is suggested therefore that blowers be tested and that nothing be accepted or used which will not utilize 75% of induced air.

A very simple testing method is illustrated by the accompanying sketch, fig. 3. In this arrangement the blower is attached to an opening in the end of a rectangular wood box approximately 3 ft. long by  $4\frac{1}{2}$  x  $4\frac{1}{2}$  in. inside cross sectional measurements. A partition is located near the inlet and is fitted with a wooden disc loosely attached with wood screw at center. Four  $1\frac{1}{2}$  in. equidistant holes are bored through disc and partition, as shown in the sketch, for the diffusion and passage of the air, and a hole with stopper is provided through the top of the box, immediately over the disc, so that it can be rotated to gauge the size of the openings through the partition, for the purpose of imposing a resistance or back pressure on the blower, equivalent to the

resistance of the fuel bed in a rivet heater. A bent glass tube partially filled with water is attached to the side of the box, and connected with the first compartment to show the extent of this resistance, which should be adjusted to a  $\frac{1}{2}$  in. water head.

An anemometer is placed in the outer end of the box, to register the flow of air which will be calculated in cubic feet by dividing the anemometer reading by 8. In testing, open the air valve on the blower until the anemometer reading reaches 280, with the resistance adjusted at  $\frac{1}{2}$  in. of water. This would represent 35 cu. ft. of air a minute. Next, close the free or induced air inlet of the blower, without changing the adjustment of the air supply valve, and this will give the net direct or high pressure air reading, which, compared with the previous total, will give the efficiency of the device.—From Standard Machine Bulletin, issued by Division of Steel Ship Construction, United States Shipping Board, Emergency Fleet Corporation.

### Transportation of Returned Soldiers to Canada.

Several steamships have arrived at a Canadian Atlantic port recently, conveying between 4,000 and 5,000 returned soldiers. Nearly 1,000 were "hospital walking cases," for whom berths had been specially erected in the ships under the supervision of the medical authorities; about 3,300 were "ordinary discharge cases." There were 300 or 400 soldiers' wives and children and 150 officers also returning.

The sending of so large a number at one time is due to a combination of circumstances. One is that, under the conditions caused by the pooling of shipping, increased use of late has been made of United States ports as against Canadian. Another is that difficulty has been experienced in getting sufficiently good steamships; vessels of inferior type could have been procured earlier, but the Canadian authorities in England rejected these and preferred to wait until they could obtain more commodious ships. As a result of this policy, the 3,300 "ordinary discharge cases" had an amount of space which ordinarily would be used to accommodate 4,400 troops on the eastbound voyage.

The difficulties experienced in getting ships has caused this to be the first considerable evacuation from England for a number of weeks. The effect was congestion at Buxton, the depot in England.

Another difficulty was caused by the cancellation of hospital ships, which was rendered necessary by the recent murderous attacks on such vessels by German submarines. This had two effects: it made it necessary to send "hospital walking cases" in ordinary steamships instead of in the specially equipped hospital vessels, special berths being erected so as to improve the accommodation as far as possible. It also increased the congestion in the hospitals in England, and this crowding has been further aggravated by the heavy casualties caused by the recent severe fighting.

The Consolidated Whaling Corporation's combined fleets in Pacific waters are reported to have taken 978 whales from the commencement of this year's whaling season. It is stated that the catch this year is the best since 1911, which was a record year.

### Ship Mast Turning Lathe.

The Traylor Shipbuilding Corporation, Cornwells Heights, Pa., has in operation in its yard a mast turning lathe that is one of the new developments in shipbuilding. Formerly the making of masts was a long and laborious operation fit for the best work of especially skilled men. The machine will handle timbers for a mast up to 100 ft. long and 3 ft. in diameter. The timber, after being centered and set up in the machine, which usually requires about half a day, is revolved at a speed of 50 revolutions a minute, by an electric motor, thus coming in contact with the cutter head, which is mounted on a carriage attached to the motor, and set at right angles to the mast. The cutter head revolves at a speed of 700 revolutions a minute. In this head are three hooked knives, which cut the material from the mast.

The carriage is propelled by a wire rope on a gypsy head, which also is run by a motor, the feed of the carriage being practically the same as on an old fashioned saw mill.

When a mast is extra long and sags in

Ship Mast Turning Lathe.

the middle, it is necessary to put a steady rest at the point where the sag is greatest, thereby making the timber run true. To get the shape of the mast; that is, the taper at the top, it is necessary to set a rail, which is bolted down to the bed of the machine and bent in exact position as the profile of the mast which is to be cut. On this rail runs a shoe, controlling the cross movement of the carriage. If the rail is set away from the machine, it pulls the carriage closer to the center of the mast. If it is set nearer it moves the carriage farther away.

The accompanying sketch of the lathe in operation was made at the plant recently by L. R. Dougherty, Staff Artist, Publications Section, U.S. Shipping Board, Emergency Fleet Corporation. The timber being turned was placed in the machine about 10 a.m., and was practically completed by the evening. The machine is very simple in operation, requiring the attention of only one man at the cutter head and another as a helper to assist in making adjustments.—Emergency Fleet News.

**Wages in Vancouver Shipyards.**—In accordance with the agreement dated June 1, respecting wages to be paid to workers in shipyards in British Columbia shipyards, an increase of 2c an hour, effective from Sept. 1, is reported to have been granted to all labor classifications. The agreement provides for such increases as are justified by the increased cost of living, during the war.

### Observance of Canal Navigation Rules.

The Canadian Lake Protective Association has issued the following bulletin:—"The particular attention of masters is again called to the rules governing the navigation of the Dominion canals, a copy of which should be in the hands of every canal navigator. The rules relating to bridges may throw an unfair burden upon the ship, particularly in view of the difficult conditions often encountered, due to current, wind or dangerous banks, all requiring the maintenance of steerage way. Nevertheless every effort must be made to observe the rules, and no master is entitled to assume that a bridge is going to be opened, merely because he has signalled to it. The courts have taken the same view in Ontario in cases relating to bridges, and until some change is made in the rules, too much reliance upon the promptness or efficiency of bridge tenders will simply result in damage claims to be met by the ship and her owners. The Canadian Lake Protective Association's committee will make further representations to the Railways and Canals Depart-

ment, renewing the request for the operation of an effective signal from each bridge in answer to signals from vessels, but until the situation is improved in this way the existing rules must be strictly observed in every way possible.

"A casualty reported with reference to the Morrisburg canal upper entrance calls attention to pending proposals for improvement of conditions there. The committee is aware of the special difficulties at this point and has sought to hasten the work of improvement which has been under consideration by the Railways and Canals Department. The application of the New York & Ontario Power Co. to the International Joint Commission for approval of their plans for power at Waddington brings this question prominently forward, and the difficulties at this point are again called prominently to the department's attention."

**The "Unsinkable" Ship.**—The s.s. Lucia, which was remodelled some time ago, in the U.S., with a view to experimenting with devices, which it was claimed would make her unsinkable, in case she was struck with a torpedo, or which, at least, would enable her to remain afloat long enough to allow of passengers and crew being removed safely, was reported to have been torpedoed and sunk, between Oct. 13 and 20, while crossing the Atlantic. She was an Austrian vessel, and was among the vessels interned in U.S. ports on the outbreak of war, and taken over subsequently by the U.S.

## British Ministry of Shipping (Canada).

The following order in council was passed at Ottawa, Sept. 5:—"The committee of the Privy Council have had before them a report, dated Sept. 4, from the Minister of the Naval Service, submitting with reference to the order in council 34, dated Jan. 12, 1916, relative to the appointment of A. H. Harris (now Sir Arthur Harris, K.B.E.) as Director of Overseas Transport, that circumstances have necessitated a change in the organization under which transport of stores from Canada to European ports is carried out. The minister states that the matter has recently been the subject of discussion between the Minister of the Naval Service, chairman of the sub-committee of council authorized by the above order in council to deal with these matters, and the British Ministry of Shipping, and that new regulations governing this matter have been agreed on, which will necessitate the cancellation of Sir Arthur Harris' appointment as Director of Overseas Transport under the Canadian Government. The minister, therefore, recommends that the appointment of Sir Arthur Harris under the above mentioned order in council, be cancelled from Sept. 5. The committee concur in the foregoing recommendation, and submit the same for approval."

The department carried on up to Sept. 5 by the Director of Overseas Transport was then transferred to the Imperial Government, the organization being now known as the British Ministry of Shipping (Canada), the personnel and office locations in Montreal being as follows:

Director General, Sir Arthur Harris, K.B.E., 319 Windsor St. Station.

Deputy Director General, W. T. Marlow, 21 Board of Trade Building.

Accountant, Geo. Wood, 21 Board of Trade Building.

Ships Movements and Bunkers, Capt. Douglas Greenshields, 21 Board of Trade Building.

Technical Department, F. Sidgwick, 21 Board of Trade Building.

Ocean Transports and Timber, W. A.

Wainwright, 21 Board of Trade Building.  
Ocean Liner Department, G. D. Robinson, 2 St. Peter St.

Superintendent Inland Transportation, D. O. Wood, 319 Windsor St. Station, Montreal.

Assistant Superintendent Inland Transportation, J. A. Glassford, 319 Windsor St. Station.

Shipments authorized for export, account of the British Government, are consigned on straight bill of lading to British Ministry of Shipping (Canada), at the seaboard, Montreal, Quebec, St. John, N.B.; Halifax, N.S., or Portland, Me., as the case may be.

## Hydrographic Survey Work.

During the past summer the activities of the Naval Service Department's Hydrographic Survey Branch have been much curtailed owing to war conditions. Two of the survey vessels are being utilized for naval purposes and two other survey vessels were not put into commission last summer, owing to the difficulty of obtaining crews and the desire to release seamen for work in the naval service and in the mercantile marine. During the summer only three parties were placed in the field; one, under Capt. Anderson, assisted by Messrs. Bachand and Beauchemin, has completed a resurvey of Sydney harbor, N.S., and is now engaged in similar work on the northwest arm, Halifax harbor, N.S. The second party, under Lieutenant-Commander P. C. Musgrave, R.N., assisted by Messrs. Davis and Willis, is engaged in a resurvey of Victoria and Esquimalt harbors, B.C. The third party, under H. D. Parizeau, is in camp on the southwest shore of Black Bay making a resurvey of that water.

In April the Hydrographer to the Admiralty offered four commissions in the R.N.V.R. to Canadian Hydrographic Survey officers, and these were taken up by R. J. Fraser, J. L. Foreman, L. G. Eritie, and H. E. Morrissey. So far as is known, all these men are engaged in making detailed surveys of various harbors used by the British and allied fleets in European waters. The British Admiralty has availed itself of the services of seven members

of the Hydrographic Survey staff to assist the British Hydrographic Office and all are actively employed in field work.

Owing to the rapid expansion of the Naval Service Department and the necessity for giving more space for the naval work, the offices of the Hydrographic Survey in Ottawa have been moved from the H. J. Daly building to the Waller St. school. The space thus vacated has been utilized for the accommodation of other offices of the Naval Service Department and is providing much needed accommodation for the overcrowded branches of the service.

## Welding Process for Shipbuilding.

Building of a steel ship without rivets has been effected in a shipyard on the south coast of England, and its construction may mark a new era in the shipbuilding industry. A process of electrical welding was used for joining the plates, in place of the usual riveting and caulking. By means of an electric arc, the joints were submitted to intense heat, and the plates were fused together. The process is not entirely new, as auxiliary work has been done in the past by electric welding. During the last year, developments have been made which have permitted of the extension of this method in ship construction. A saving of between 20 and 25% is claimed in both time and material, judging from experimental work done on the vessel launched recently.

The general adoption of electrical welding in shipbuilding would permit a material speeding-up of production. The electric process is particularly economical in the assembling of bulkheads, deck structures and other interior work. The United States is keeping in touch with the developments in this work in Great Britain, and arrangements are under way for the construction of several 10,000-ton standard ships by the same process. These large vessels will contain about 2½% of the number of rivets originally intended, while the British boat was absolutely rivetless.

## Among the Express Companies.

A. G. Taylor has been appointed agent, Canadian Ex. Co., Napanee, Ont., vice J. A. Day, resigned.

F. A. Dunne has been appointed agent, Dominion Ex. Co., Edmonton, Alta., vice O. E. Ford, transferred.

C. E. Theriault has been appointed agent, Canadian Ex. Co., Granby, Que., vice J. L. Davian, transferred.

W. E. Norton has been appointed agent, Dominion Ex. Co., Sydney, N.S., vice C. S. Coleman, resigned.

E. O. Shannon has been appointed agent, Canadian Ex. Co., Belleville, Ont., vice G. Jacobs, enlisted for active military service.

J. H. Chadwick has been appointed agent, Canadian Northern Ex. Co., Edmonton, Alta., vice W. E. Poole, transferred.

O. E. Ford, heretofore agent, Dominion Ex. Co., Edmonton, Alta., has been appointed agent at Calgary, Alta., vice F. R. Jelfs, transferred.

R. H. Jones, route agent, Canadian Ex. Co., Toronto, is acting as route agent at Hamilton, Ont., during the absence through illness of G. W. Hickey.

W. F. Oblender has been appointed station agent, Canadian Ex. Co., Hamilton, Ont., vice D. McKenzie, who has been transferred to a messenger run.

## Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie canals during September, 1918.

W. D. Thomson, who was mentioned in our last issue as having been appointed acting agent, Dominion Ex. Co., Calgary, Alta., was appointed acting route agent there.

C. E. Potts has been appointed travelling agent, Canadian Northern Ex. Co., with jurisdiction over lines between Ottawa and Port Arthur, Ont., with headquarters at Toronto.

J. Bolduc has been appointed travelling agent, Canadian Northern Ex. Co., with jurisdiction over lines in Ontario and Quebec, east of Ottawa, with headquarters at Quebec, Que.

F. H. Smith has been appointed acting Assistant Superintendent, Pacific Division, Dominion Ex. Co., Calgary, Alta., during the absence of M. W. Hastie, Assistant Superintendent, on leave.

The Canadian Northern Ex. Co. has placed its service in operation on the Canadian Northern Ry. between Pembroke and North Bay, Ont., and has opened offices at Alderdale and Brent, Ont.

Edward Allen, Superintendent, Canadian Ex. Co., Toronto, died suddenly there, Oct. 22. He was born in Ireland, and came to Toronto in early life. He had been associated with the Canadian Ex. Co. for 50 years. His health had not been good for some time, but he had attended to his duties and was at his office as usual on the day prior to his death.

### Telegraph, Telephone and Cable Matters.

John Spiers, agent and operator, Great North Western Telegraph Co., Sandwich, Ont., died there Oct. 20, aged 65.

A. Hanley, local manager, Great North Western Telegraph Co., Kingston, Ont., for the past 15 years, died there recently.

The Marconi Wireless Telegraph Co. is reported to have decided to build a wireless telegraph plant at Buckley Bay, B.C.

R. Bodell, Commercial Supervisor, Great North Western Telegraph Co., Toronto, died Oct. 21 from pleuro-pneumonia. He had been in the company's service for 13 years.

The Anglo-American Telegraph Co. has given notice that owing to staff shortages at cable stations, it has been found necessary to suspend until further notice, the trans-Atlantic deferred rate service.

The Great North Western Telegraph Co. has opened offices at Riviere Madeleine, Que., Bolger and Glencoe, Ont., and has closed its offices at Abenakis Springs Hotel, Little Metis Beach, Pointe au Pic, St. Godefroy and Valcartier Camp, Que.; Grand Beach, Man., and Alberta Beach, Alta.

The Great North Western Telegraph Co. and its employees have agreed to refer their differences to the Canadian Railway War Board of Adjustment, No. 1, which meets early in November. Several points of difference have been settled, but others, covering the time schedule, the inclusion of chief operators, branch and smaller offices and line gang foremen, and the adjustment of district foremen's wages, are being referred to the board.

The President of the United States has brought to the attention of the heads of departments the serious situation confronting telegraph and telephone companies, growing out of the recent heavy depletion of their trained operators due to the government's call, and has suggested that they should be careful not to

take operators away from these agencies, which are now controlled by the government, without previous consultation with the superintendent of the companies.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The C. E. A. Carr Co., railway supplies, etc., Toronto, has appointed H. F. Powell, as a member of its selling staff. He is a son of W. B. Powell, General Manager, Montreal & Southern Counties Ry.

Brown Hoisting Machinery Co., Cleveland, Ohio, has issued catalogue D. 1919, describing and illustrating Brownhoist trolleys, rail systems, hand travelling cranes, electric hoists, monorail man-riding trolleys, crabs and winches, and portable floor cranes.

Armstrong, Whitworth of Canada Ltd., Montreal, has issued a folder, containing a group picture of those present at the opening of its locomotive and car wheel tire and wheel plant at Longueuil, Que., on July 31, a view of its entire plant there and a number of views showing some of the most important operations in the manufacture of locomotive and car wheel tires, including latterly of 6-ton Heroult electric furnaces; ladle in position receiving charge of molten steel; teeming tire ingot from ladle into ingot moulds; 2,000-ton steam intensifier forging press; forging ingot into tire bloom; 600-ton steam intensifier hydraulic Becking press; forging bloom into rough outline of tire; tire rolling mill, last operation completing tire.

Independent Pneumatic Tool Co.—John P. Hopkins, chairman board of directors, died at Chicago, Oct. 13, after a few days illness, death being attributed to a weak heart, superinduced by an attack of Spanish influenza. He was born in Buffalo, N.Y., in 1858. He moved to Chicago in 1880 and obtained a position with the Pullman Palace Car Co. as a machinist. Later he went into business for himself as a partner in Secord & Hopkins, general merchandise, at Pullman, Ill. This venture proved successful and was the foundation for the large fortune he built up. In 1905 he was one of the organizers of the Independent Pneumatic Tool Co. and he was its largest stockholder. He served the unexpired term of Carter H. Harrison, Sr., as Mayor of Chicago in 1893-94 and was several times chairman of the Democratic National Committee. Since the beginning of the war he had served as Secretary to the Illinois Council of Defense. His close attention to war work undoubtedly affected his health and hastened the end.

### Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 353 Church Street, Vancouver, B.C.

### STEAM ENGINES AND SURFACE CONDENSERS FOR IMMEDIATE SALE

#### All of Canadian Manufacture

Suitable for general mill work, power transmission by belt, rope drive or spur gearing, for driving woodwinding, grinding, or crushing machinery, or air compressors, in factories, saw mills, pulp and paper mills, ship yards, munition works, mines, grain elevators, etc., or for reconstruction into other uses requiring heavy reciprocating parts.

1—500 h.p. vertical cross compound, 4 valve engine with shaft governors, cylinders, 18 and 24 x 24 in., 150 r.p.m., with 1 325 k.w., 3 phase, 60 cycle, 2,300 volt alternator direct coupled; also belted exciter. For electric power transmission.

1—900 h.p. vertical cross compound, 4 valve engine with shaft governor, cylinders, 20 and 28 x 24 in., 150 r.p.m., with 1 600 k.w., 3 phase, 60 cycle, 2,300 volt alternator direct coupled; also belted exciter. For electric power transmission.

2—600 horizontal cross compound, Corliss engines, 18 and 24 x 42 in., cylinders, 100 r.p.m., crank shaft 18 in.

1—1,200 h.p. cross compound Corliss engine, cylinders, 26 and 32 x 18 in., 85 r.p.m., crank shaft 22 in.

2—1,200 cross compound Wheelock gridiron valve engines, cylinders 27 and 32 x 46 in., 90 r.p.m., crank shafts 24 in.

1—250 h.p. Wheelock type, cross compound type engine, cylinders 16 and 27 x 40 in., with belt flywheel, 16 1/2 ft. diam. and 33 in. face.

The 600 and 1,200 h.p. horizontal engines now have electrical generators mounted upon them which the present owner wishes to keep. Generators to be removed from engine shafts and engines sold without them.

These engines could be fitted with new fly wheel rims for belt driving, or with spur gearing, making them available for any kind of factory duty.

All of them have been operated at 135 pounds steam pressure and about 25 in. vacuum. All in good order; some of them have been run recently.

These engines ought to be sold entire, and would be an advantageous purchase for any establishment where reciprocating engine power can be economically employed, especially where EXHAUST STEAM HAS COMMERCIAL VALUE as it frequently has in isolated power plants, for drying or evaporating, or for heating buildings in this Northern climate.

Attention of manufacturers is called to the possibility of using the cylinders, shafts, fly wheels, or even the frames, of any or all of these engines as possible component parts of air and ammonia compressor engines, blowing engines and other heavy machinery requiring reciprocating steam power. Owners will consider reasonable offers for parts of the engines.

There are also for sale—  
2—Surface Condensers, each of about 14,000 sq. ft. cooling surface. Both suitable for large steamships. Also, 2 combined air and circulating pumps, vertical crank and fly wheel type, and one horizontal tandem, 3-cylinder air and circulating pump.

Correspondence is desired with parties who may have immediate use for any or all of these engines, condensers, or parts thereof. Prices on application, subject to prior sale.

**WINNIPEG ELECTRIC RAILWAY CO.**  
Winnipeg, Man.

# Canadian Railway and Marine World

December, 1918

## The Canadian Railway War Board's Executive Committee.

The Canadian Railway War Board's executive committee's first meeting since its re-organization, by the addition to it of E. W. Beatty, President, C.P.R.; and by the substitution of D. B. Hanna, President, Canadian Northern Ry., for the former President, Sir William Mackenzie, was held in Montreal Nov. 6, being attended by Lord Shaughnessy, Chairman, C.P.R. Co., who continues as Chairman of the Canadian Railway War Board; Vice Chairman, H. G. Kelley, President, Grand Trunk Ry.; E. W. Beatty, President, C.P.R.; D. B. Hanna, President, Canadian Northern Ry., and A. H. Smith,

becoming acute last winter, is now greatly modified.

"The supply of freight cars has been increased by 14,000 new cars bought by the government for the government roads. These new cars, added to the better loading, quicker handling and more rapid unloading methods obtained through the Canadian Railway War Board's efforts, mitigate the danger of car shortage. That, however, does not mean that economical methods may be relaxed. Last winter over 20,000 Canadian cars were lost in the United States traffic tie-up. It is hoped that this winter

cept in so far as the roads are still understaffed. A special labor board, formed at the request of the Canadian Railway War Board, with the co-operation of the brotherhoods, is administering the McAdoo award very satisfactorily. Over 14,000 railway employes have been laid off by influenza, but are now returning to work. Forty-five thousand doses of anti-flu serum have been sent west by the board to forestall any further spread of the disease.

"Old trouble spots have been carefully guarded. The temporary isolation of the Drumheller coal fields in Alberta by rail-

The Canadian Railway War Board's Executive Committee

From photograph taken in Canadian Pacific Ry. Co.'s board room at Montreal, Nov. 6, 1918. From left to right those present are—Howard G. Kelley, President Grand Trunk and Grand Trunk Pacific Railways; D. B. Hanna, President, Canadian Northern Ry.; Lord Shaughnessy, K.C.V.O., Chairman, Canadian Pacific Railway Co., who is also Chairman of the Canadian Railway War Board; A. H. Smith, formerly President, New York Central Rd.; E. W. Beatty, President, Canadian Pacific Railway Co., and W. M. Neal, General Secretary, Canadian Railway War Board. The oil paintings on the walls are of Lord Mount Stephen to the left and Lord Strathcona to the right.

formerly President, New York Central Rd., now Eastern Regional Director, United States Railroad Administration, who represents U.S. lines operating in Canada. The following statement was issued after the meeting:—

"Whether peace comes tomorrow or next week, Canada's trade arteries are in healthy condition and will meet even the most complex changes in the current of traffic, without confusion or congestion. Thanks to the foresight of the Dominion Government in ordering locomotives to be built at a time when some of the Canadian roads were unable to finance and purchase, the power situation is now fairly satisfactory. Two hundred new locomotives are now in service on the Canadian Government, Canadian Northern and Grand Trunk Railways. The scarcity of locomotives, which was on the verge of

the U.S. lines will be able to return Canadian cars almost as fast as they get them.

"There is more track-room this year, although the traffic handled has been heavier than ever. The Canadian Railway War Board was successful in getting several heavy movements, such as the fuel and pulpwood movements, well out of the way during the summer, when traffic is light. This clears the roads for essential winter traffic and the unusually heavy movement of wheat by rail during the coming winter. The condition of rails and roadbed is not as satisfactory as might be desired. New rails have been denied the roads owing to the heavy demand for steel for munitions. Out of the 100,000 tons finally allotted only 80,000 have been received. These have been used to good advantage on the main lines.

"The labor situation is satisfactory, ex-

way breakdown last winter, and the consequent fuel shortage in certain prairie districts, will almost certainly not happen this winter, as the vital section of line has been double tracked. The board has made working plans for the Canadian Northern, Canadian Pacific and Grand Trunk Pacific to co-operate in carrying traffic in the west should any one road find itself overburdened. The board has arranged also that the Michigan Central, Toronto, Hamilton & Buffalo, C.P.R. and G.T.R. shall all haul traffic direct into Toronto. Formerly the G.T.R. had the only direct route. The Michigan Central hauled from the frontier to Welland, the T.H. & B. from Welland to Hamilton and the C.P.R. from Hamilton to Toronto. The locomotive coupled on at the frontier will now run through to Toronto.

"Plans are being perfected for further

unification of terminal and other facilities. There is reason to believe that except for possible contingencies of storm and zero weather, epidemics and labor shortage, Canada's railway system is in more nearly perfect condition to face peace conditions and the reconstruction period than any in the world."

### Regulations for Care of Railway Rolling Stock.

The United States Railroad Administration's Operating Division has issued the following instructions to all railways:

**Care of Journal Boxes.**—It is desired that all freight car journal boxes be repacked with properly prepared packing at least once every 12 months, at which time all packing will be removed from the boxes and the boxes cleaned; dust guards to be renewed when wheels are changed. The date and place where the work is done must be stenciled on the car body in 1 in. figures and letters, using the same station initial that is used for airbrake stencil. This work to be done as far as possible when cars are on repair track undergoing heavy repairs. When on repair track for heavy repairs, cars which have not had boxes repacked within 9 months will have all boxes repacked and the record stenciled on the car as above. This does not contemplate any change in the intermediate packing of boxes when it is necessary to do so. No change should be made in the stenciling unless all boxes are repacked.

**Inspection of Ashpans and Spark Arresters.**—A careful and thorough inspection of every part of the spark arresting appliances in front end of locomotives must be made every time the front end door is opened for whatever purpose; but at intervals of not more than 7 days, and at the same time, the ash pans, hoppers, slides, or other apparatus for dumping cinders and dampers must also be inspected. Observe if the slide or hopper operates properly and closes tight. When conditions such as extreme drought or the state of adjoining property or crops require it, this inspection must be made at least once every 24 hours.

A record of condition on arrival must be made under the proper heading on an approved form, immediately following each inspection, with the date made, together with a complete statement of any repairs or renewals required. The above record to be made and signed by the person who made the inspection.

Nettings and spark arresters must be put in perfectly tight and serviceable condition before the locomotive is put into service. Renew netting and plates in front end when worn thin or defective, instead of patching them. Ash pans and hoppers must be tight, and dampers, slides, or apparatus for dumping cinders must be in good working order, closing tight.

Record of repairs and renewals made must be entered under the proper heading on an approved form when repairs have been made, with the date; the entry to be made and signed by the person doing the work.

These are the minimum requirements, and local conditions or regulations requiring additional precautions are not affected hereby.

**The Organization of a Canadian Railway.**—E. S. M. MacNab, Engineer of Car Lighting, spoke at the Montreal weekly electrical luncheon on Nov. 20, on "The organization of a Canadian railway."

## Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, ex-Assistant Superintendent Lake Superior Division, Canadian Northern Ry., Capreol, Ont., now of Pittsford, N.Y., born there Dec. 7, 1874.

A. G. Albertson, City Ticket Agent, C.P.R., San Francisco, Cal., born at Copenhagen, Denmark, Dec. 31, 1887.

J. H. Barber, Engineer, Double Track, C.P.R., Toronto, born at Cobourg, Ont., Dec. 20, 1856.

H. E. Bissell, Land and Tax Agent, Grand Trunk Pacific Ry., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, ex-Engineer, Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

W. W. Butler, Vice President and Managing Director, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochabar, N.S., Dec. 18, 1867.

W. C. Casey, General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

John Flynn, Car Foreman, C.P.R., Smiths Falls, Ont., born at Richmond, Que., Dec. 5, 1867.

G. C. Gahan, Assistant General Auditor, C.P.R., Montreal, born there Dec. 28, 1874.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Railways, Quebec, now of Toronto, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, General Tie and Timber Agent, and acting General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, General Manager, Delaware & Hudson Rd., U.S. Railroad Administration, Albany, N.Y., born at Mifflinburg, Pa., Dec. 21, 1864.

Jas. H. Hall, President, Western Transportation Co., Ltd., Ottawa, Ont., born at Hawkesbury, Ont., Dec. 20, 1862.

J. T. Hallisey, Superintendent, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, President, Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

R. W. D. Harris, Trainmaster, Moose Jaw Division, Saskatchewan District, C.P.R., Moose Jaw, born at Victoria, B.C., Dec. 12, 1879.

J. J. Hennigar, District Freight Agent, Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

A. J. Isbester, ex-Assistant District Engineer, Port Arthur District, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

L. S. Landers, Assistant Engineer, Canadian Government Railways, Levis, Que., born at Farnham, Que., Dec. 15, 1888.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

E. S. McMillan, Road Foreman of Locomotives, G.T.R., Montreal, born there, Dec. 14, 1880.

J. M. MacArthur, Superintendent, Medicine Hat Division, Alberta District, Medicine Hat, Alta., born at Toronto, Dec. 8, 1885.

A. E. Macdonald, General Claims Agent, Canadian Northern Ry., Winnipeg, born at Woolwich, Eng., Dec. 11, 1870.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

W. J. Mathison, Assistant Superintendent, District 1, Intercolonial Division, Canadian Government Railways, Montreal, born at Havelock, Ont., Dec. 12, 1877.

J. C. O'Donnell, Superintendent, Divisions 2 and 3, Central District, Canadian Northern Ry., Winnipeg, born at Cobden, Ont., Dec. 17, 1879.

Alfred Price, General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant to General Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hants, Eng., Dec. 23, 1870.

G. D. Robinson, Ocean Lines Department, British Ministry of Shipping (Canada), Montreal, born at St. John, N.B., Dec. 7, 1877.

G. E. Smart, Superintendent Car Department, Canadian Government Railways, Moncton, N.B., born at Edinburgh, Scotland, Dec. 23, 1873.

W. Tansley, Car Service Agent, New Brunswick District, C.P.R., St. John, N.B., born at Shelburne, Ont., Dec. 27, 1872.

M. F. Tompkins, Freight Agent, Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, Consulting Engineer, C.P.R., Montreal, Vice President and General Manager, Dominion Bridge Co. and Vice President and Managing Director Dominion Copper Products Co., born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, Assistant Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. H. Wood, Foreman, Michigan Central Rd., Kensington, Ill., born at St. John, N.B., Dec. 30, 1880.

**Canadian Ticket Agents' Association.**—The following are the officers for the current year: President, H. F. Whittier, Trenton, Ont.; Vice President, J. Rainsford, Clinton, Ont.; 2nd Vice President, J. A. McDonald, Valleyfield, Que.; 3rd Vice President, A. C. Rorabeck, North Bay, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Executive Committee, W. Jackson, Clinton, Ont.; W. J. Moffatt, Toronto; C. B. Janes, Orillia, Ont.; O. M. Hare, Tilsonburg, Ont.; W. H. C. Mackay, St. John, N.B.

# Repairing Locomotive Fittings.

The tools here illustrated are a few of many similar devices used in the Southern Pacific Co.'s shops at Sacramento, Calif. Fig. 1 shows a self-feeding reamer for reclaiming worn distributing valve bushings in air-brake equipment, and fig. 2 shows all parts of the tool in detail. This tool, which is adapted for self-feeding through the work, is made up of a central body, or mandrel, B, 16½ in. long and

ing nut E at the rear is 12 per inch. One complete turn of the nut therefore means the equivalent of an expansion of the reamer of 0.0277 in.

The reamer D has 18 teeth milled to a depth of 3/16 in. and six 1/16 in. saw cuts are run through from end to end as shown. Except for a distance of ½ in. at the rear face the saw cuts are carried

button-head screws which pass through body-sized holes in the bronze feed nut and enter tapped holes in the steel guide nut.

In use the steel guide nut is screwed into the end of the distributing-valve casing by removing the cap plug, and this brings the feed nut into alignment with the bushing to be reamed, so that when

Fig. 1. A 14-in. expanding self feeding reamer.

Fig. 3. Hand reamers for steam turret.

1½ in. in diameter, except for the enlarged portion, which carries the reamer proper, and at the outer end is a fine thread for feeding it through a guide nut while at the rear end is a coarser thread for receiving and adjusting the nut which sets the reamer up on the taper at C.

The reamer proper is shown at D, and

Fig. 2. The reamer members.

down to the bore, so that there is a good opportunity for the reamer to expand with close uniformity for the greater portion of its length. Midway of the face there is a ¼-in. pin inserted to enter a groove of the same width in the conical body C on which the device is mounted, to provide against the rotation of the tool

the reamer is run into place with its threaded inner end entered through the feed-nut thread the mandrel is correctly positioned for the passing of the reamer through the bushing. On applying a wrench to the squared end of the reamer shank the tool is drawn forward through the work at the rate of 0.025 in. per revo-

Fig. 4. Details of hand reamer for steam turret.

like all other parts of the tool it is also shown distinctly in fig. 1 in front of the distributing valve which is to be overhauled, the same reference letters being used on both illustrations for convenience in comparison.

Upon referring to fig. 2 it will be seen that the conical body C is a taper of 4 in. to the foot. The thread for the adjust-

upon its seat. Near the leading end of the mandrel B there is a fine-pitch thread (40 per inch) which receives the feed nut F. This is a bronze nut, with knurled edge, and with a shouldered face to seat in a counterbored recess in the corresponding face of the steel guide nut G when the tool is assembled. The two nuts are then secured together by two ¼-in.

lution.

The reamer proper fits upon a reverse taper on the body, so that the expansion of the tool is obtained by the adjusting nut at the rear, against which the thrust of the reamer is taken, so that there is no tendency for the reamer to expand under the cut as might occur under certain conditions of usage if the small end of the

cone were forward and the reamer consequently pressing back against an enlarged taper center.

Another set of hand tools is shown in figs. 3 and 4 for finishing steam-turret or fountain valve seats. The tapped open-

tool is shown assembled at the left in the drawing, fig. 4, and also in the illustration, fig. 3. The group of tools illustrated in figs. 5 and 6 are used for the repair of lubricators. The lubricator parts taken care of by the tools shown are the feed

is included in the drawing, fig. 6.

The expanding reamer in fig. 7 is applied to the saving of worn-out bushings in various sizes of triple valves for air-brake equipment. While constructed along similar lines to the reamer in fig. 1 there are various points of difference.

This particular reamer is applicable to numerous classes of valves, by merely changing the guide nut, a feature indicated by the detail drawing, fig. 8, where three different sizes of guide nuts, A, B

Fig. 5. Tools for repairing lubricators.

ing through which the valve-reseating tools must enter is  $4\frac{1}{4}$  in. Both the flat facing cutter K and the angular seat steam turret and so align the tools properly both are adapted to fit on to the threaded end of a shank M, fig. 5. The shank for

nozzles, regulating valve, water valve, auxiliary steam-valve bonnet and nut and numerous other fittings and connections. The uses of the special drills, counter-bores, conical reamers, taps and dies will be apparent to the reader.

Fig. 7. Adjusting reamer for triple valves.

and C, are included, all used as required in connection with the one reamer bar.

The feed nut is provided with a pair of  $\frac{1}{4}$ -in. holes for 2 machine screws which are used to fix the nut to whichever guide nut is required, the tapped holes in the

# Canadian Northern Railway's Annual Report, Meeting, Etc.

The C.N.R.'s annual meeting was held in Toronto, Oct. 25, when the report for the year ended June 20, 1917, was presented, over the signature of Sir Wm. Mackenzie, the former President, the financial statements being signed by D. B. Hanna, the former Third Vice President, and now President. Owing to the belated presentation of the report, much of the information contained in it is not of current interest, and therefore only brief extracts from it are given below.

The annual meeting was purely a pro forma one, and the board of directors as constituted recently, after the company's property passed into the Dominion Government's possession, was re-elected.

## Extracts from Annual Report.

The results of the operations of the system for the year were as follows:—

Gross Earnings—	
Passenger traffic .....	\$ 7,611,807.94
Freight traffic .....	32,188,799.93
Express, mail, telegraph, interest and profits from elevators and other subsidiary companies, investments, etc. ....	3,694,468.69
	\$13,495,076.56
Working expenses (including taxes, etc.) .....	31,349,408.18
Net earnings .....	\$12,145,668.38
Interest charges .....	14,607,805.35
Net deficit .....	\$2,462,136.97

The average mileage operated throughout the year was 9,396, compared with 8,048 for the previous year; the total mileage in operation at the close of the fiscal year being 9,433.4, an increase of 137.4 over the mileage in operation June 30, 1916.

The gross earnings were \$43,495,076.56, an increase of \$8,018,801.50, or 22.6%, and the gross earnings per mile of line operated were \$4,629.11, against \$4,408.08 the previous year. Net earnings show an increase of \$2,772,137.84, or 29.57%, and net earnings per mile of line operated were \$1,292.64, compared with \$1,164.70 the previous year.

The statement of freight carried shows, with one exception, an increase in the tonnage of all commodities handled. Revenue tonnage increased by 7.887%—the average haul increased by 30.93 miles. Grain is the only commodity which shows a decrease, viz., 1,258,048 bush, less than the previous year. This is not due to any competitive loss, but from a decrease in total yield as foreshadowed in the previous year's report. As the increase in grain handled in 1916 over 1915 was 125.31%, and as the increase of 1917 over 1916 is 123.2%, and as the total tonnage of grain and flour handled in the year is greater, no anxiety is felt by your directors on this feature, especially when the increases in all other commodities are considered. The advantage of a diversified distribution of traffic is shown by the slight increase in the ton mile rate, which advanced from .679 in 1916 to .688 in 1917.

Not since 1912 has the annual commodity statement shown so many cars of immigrants handled as appeared for the fiscal year under review. European immigration is for the present discontinued and these figures represent the movement of settlers—from eastern provinces to some extent, but more largely from the United States—of the most valuable type from a traffic producing point of view, as home-seekers from these fields invariably bring to the country a large equipment, enabling them to become shippers in a comparatively short time.

Coal traffic from the Drumheller district in Alberta is showing a very satisfactory development, the returns for the last six months of the calendar year showing an increase in tonnage of 138%, the total for the six months of 1917 being 329,552 tons, compared with 137,997 tons for the same period of 1916. The coal from this section is being used in a rapidly widening field with correspondingly increasing revenue for your system.

The territories served by your western lines continue to show most promising progress in the production of live stock, including hogs and sheep. This is reflected by the substantial increases in the number of head of cattle brought over your lines to the Winnipeg market. For the last calendar year the returns of the Winnipeg market show that the Canadian Northern brought in to that market a very large proportion of the total receipts, viz.:—of cattle 42.6%, of hogs 33.4%, and of sheep 36.3%. In the same period the number of cattle brought into the Winnipeg market by the C.N.R. increased from 63,004 to 120,345.

The working expenses were 74.77% of the gross earnings of the system proper, and including taxes 72.08% of the gross earnings from all sources, compared with 74.73% and 73.58% respectively last year. The fiscal year under review was a very trying one to railway officials generally, due to the many conditions which combined to increase the working expenses of the railway. Early in the fiscal year the coal situation caused your operating officers the greatest concern. In Alberta the coal miners went on strike for three of the best production months, greatly reducing the available supply. Strikes and suspension of work by the coal miners in the Pennsylvania and other fields on which Canadian railways depend for their supply from Quebec to the midwest greatly limited the output. Many munition plants had increased their operations during the year, and were making additional demands for steam coal. The transfer of lake tonnage to the Atlantic affected the amount of coal regularly obtainable from lake ports, and it was only by the most energetic measures that a supply could be obtained. Under such conditions the price of fuel coal soared upward—not only was the initial cost increased, but all other costs, such as lake freights, cost of handling, etc., also went up, and, due to the dislocation of the supply, large expense was incurred in abnormal rail movements over the system's lines. Your company was fortunate in having unfulfilled contracts for coal, under which practically all their requirements were obtained, and for this reason did not have to pay the largely increased prices which were put into effect early in the calendar year. Beginning with July 1, 1917, net operating figures have been seriously disturbed on this account—not due alone to the much higher price now being paid for fuel coal, but also due to the falling off in the quality of coal obtainable. The prospect for immediate improvement in this respect is not reassuring. All other materials have been similarly affected. The cost of the principal supplies in use by the railway has increased from 50% to over 100%. A few actual increases are as follows:—

	1916.	1917.	Increase %
Coal, per ton .....	\$3.56	\$5.70	60.11
Steel rail, per ton ....	35.00	60.00	71.43
Track spikes, per cwt. ...	2.50	4.50	80.00
Angle bars, per cwt. ...	1.65	3.50	112.12

Brass castings .....	25.50	39.15	53.50
Iron and soft steel bars ..	2.20	3.77	71.14
Steel and iron sheets. ...	2.30	3.50	52.17

Lumber and timber increased 25% and all rubber supplies about 70%. Not only were prices high, but it was in many cases often impossible to obtain the required materials at any price. Since the close of the fiscal year, the above prices have shown further increases. The cost of living also increased. This was seized upon by every class of labor employed by the railway as a ground on which to make demands for increased wages. On the top of this there developed a great shortage of unskilled labor, which was particularly felt in the maintenance of way department. Under such conditions it is remarkable that operating expenses only increased by \$5,246,663.66, or 20.10%. But, in order that there may be no misunderstanding about the matter, it is stated that due to the shortage of labor, work considered necessary and desirable could not be undertaken, and must therefore only be considered as deferred, and this situation is aggravated to the extent that from the expenditure incurred for labor due to these conditions, less value is obtained for every dollar paid out. The operating ratio, in the face of these abnormal conditions, was maintained at the same percentage as last year. Only by the exercise of the strictest supervision of operating expenses and application of the most efficient methods by our operating officials, was this made possible.

**Esquimalt & Nanaimo Ry. Land Rights.**—In 1883 the British Columbia Government transferred to the Dominion Government certain lands which were to be granted to the E. & N.R. in aid of construction. The land belt granted to the company extends along nearly half the east coast of Vancouver Island, from near Seymour Narrows to Saanich Inlet. When the Dominion Government transferred the lands, it transferred the foreshore lands and the mineral rights under them in so far as they were vested in the Dominion. In later years H. W. Treat and his associates staked out certain lands in the Chemainus District, at the mouth of the river, and obtained licenses from the B.C. Government. The E. & N.R. protested, and subsequently brought action against Treat for trespass. This action was dismissed by Justice Clement, and the company took the case to the Court of Appeal, which gave judgment, Nov. 5, against the company. There are a number of other persons who have staked claims along the foreshore within the E. & N.R. land areas, who will be affected by the decision.

**E. G. Evans**, formerly General Manager, Moncton & Buctouche Ry., which has been taken over and is being operated as a part of the Canadian Government Railways system, and who is now Division Engineer, C.G.R. at Moncton, N.B., writes: "I certainly must congratulate you on the wonderful progress which has developed, both as regards the matter, information and general make up of the Canadian Railway and Marine World, to which I have been a subscriber for several years."

**Canadian Northern Railway Executive Committee.**—At the C.N.R.'s annual meeting in Toronto recently, an executive committee was appointed, consisting of all the directors, and the quorum was fixed at four.

# The Chippewa-Queenston Power Canal and Construction Railway.

Digging partly in fine, wet clay sand, productive of dangerous slides when undrained, and partly in very stable red clay, what are said to be the two largest electric revolving shovels in the world are stripping the site of the Queenston-Chippewa Canal, most of the flow section of which will be in rock. The canal, which will take water from the Niagara River above the Falls, through the Welland River, locally known as Chippewa Creek, and deliver it to a 300,000 h.p. power plant below the last rapids, is part of a project to develop 305 ft. net head of the 327 ft. difference in level between Lakes Erie and Ontario. The work is being pushed during the war by the Hydro-Electric Power Commission of Ontario, as a conservation measure, made urgent by the great shortage of power, both steam and electric, in the territory served by power from Niagara Falls, and by the fact that none of the plans now in operation at the falls can be made to develop more than two thirds of the total available head, while the treaty limit of possible diversion from the falls has been nearly reached, making it necessary to utilize the small surplus of available water under the maximum head which physical conditions will permit.

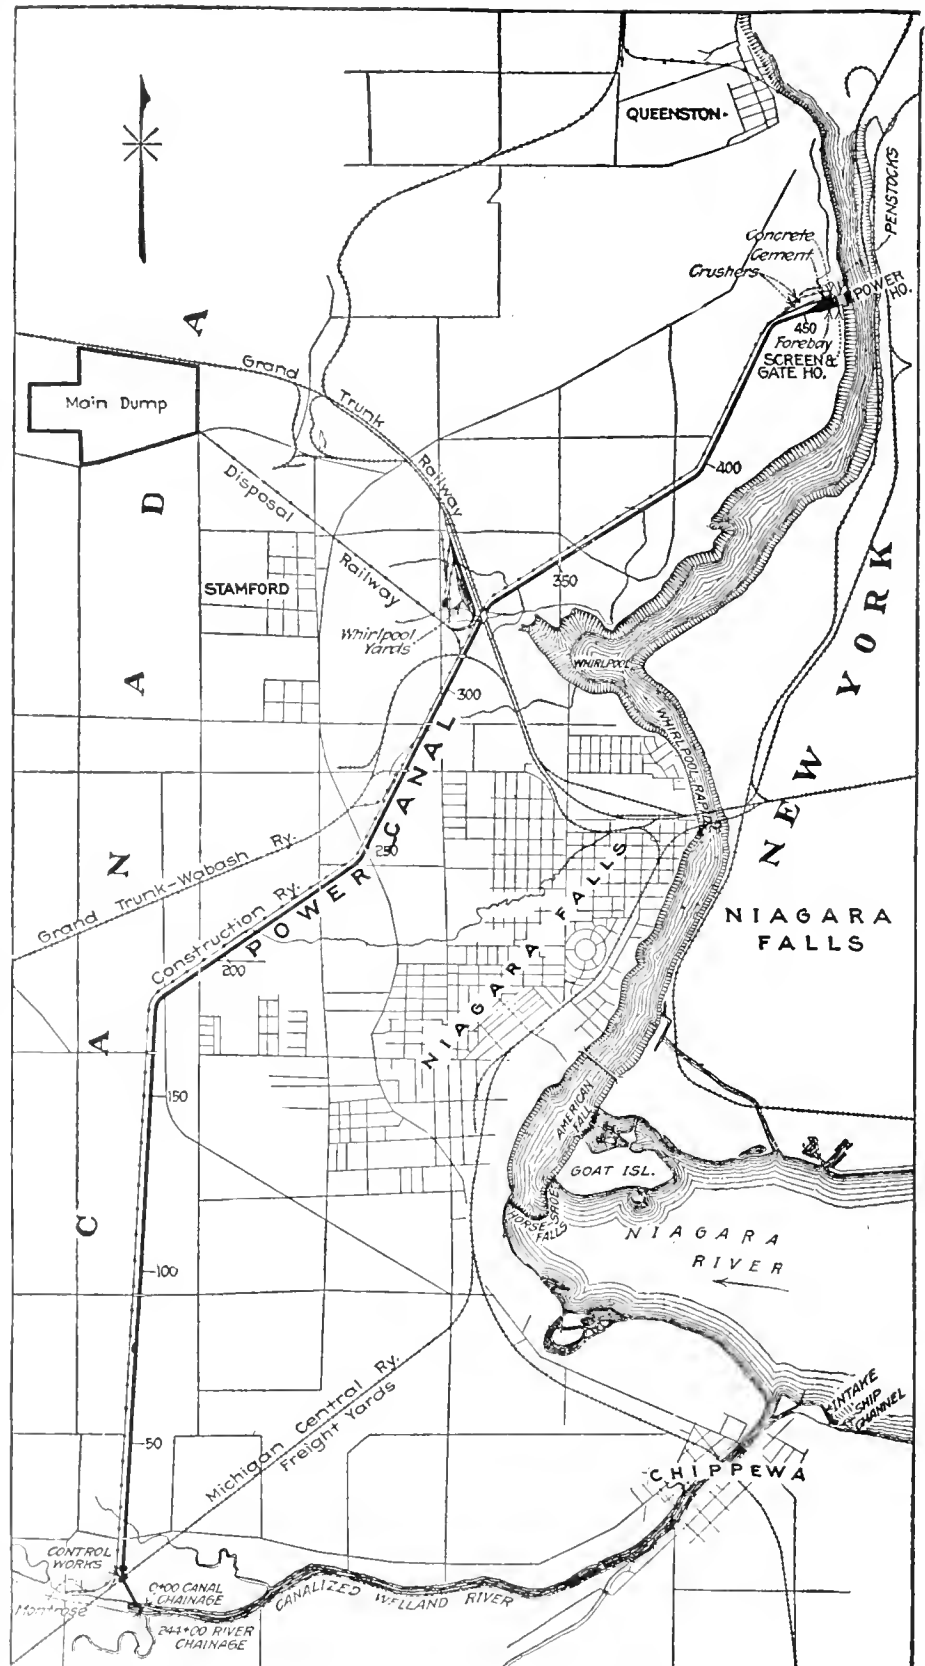

The construction, which is being carried on by the commission's forces, involves the removal, from the Welland River and the artificial section of the canal, of 13,000,000 yd. of earth, which is being taken out by cableway and dredge on the river section and by the big shovels in the dry cut, and 4,000,000 yd. of rock from the canal and forebay, to be removed by the big shovels and by standard railway shovels. In addition to the power house and the gatehouse, 10 concrete arch bridges, 3 of them carrying railways and a reinforced concrete intake structure requiring extensive cofferdam work in the Niagara River, are among the structures required.

The dredged river channel, with a gradient of 0.63 ft. to the mile and a mean velocity of 2.0 ft. per second, and the canal, with a gradient of 1.1 ft. to the mile and an estimated velocity of 6 to 7 ft. per second, will pass 10,000 sec.-ft. of water. The power house will contain six 52,500 h.p. units, and the site itself, as well as the scheme as a whole, is capable of being expanded, by the provision of additional waterways and power house space, to take the entire quantity of water that can be diverted under the present treaty on the Canadian side, amounting to slightly more than 1,000,000 h.p. capacity.

Drawing water from Grass Island pool, after a slight fall from Lake Erie, and delivering it back into the Niagara River below the last rapids at a point where the fall to Lake Ontario is but little more than a foot, the general scheme of development is thought to be by far the most favorable of any yet conceived, and will cost, complete, about \$25,000,000. The time of completion is conditioned by the excavation, on account of the heavy yardage involved, and the opening up of the work and the method of attack with large shovels was dictated by the character of the overburden, which could not be depended upon to support heavy, concentrated loads. The nature of the soil, which contains a considerable quantity of ground water and is so fine in places as to have the appearance of clay, made the use of large draglines, operating from the

tops of the slopes, out of the question. For the same reason it was desirable to carry the heavy excavating equipment right through on the rock surface, to avoid the continuous trouble with soft ground. This required shovels with a

great reach, cars on a track 64 ft. above the rock surface having to be loaded at several points. Very large revolving shovels were therefore selected for the work. One has a 90-ft. boom set at 53 deg., with a 58-ft. dipper stick and a 5-yd.

Power Canal and Construction Railway, from Welland River to Niagara Gorge below Rapids.

dipper. Another has an 80-ft. boom set at 45 deg., a 54-ft. dipper stick and an 8-yd. dipper. A third shovel, similar to the second, will soon be installed. After the earth is stripped and the three shovels are put on the rock excavation, all will be equipped with 5-yd. dippers.

The cut is made by starting a pilot near one side of the canal prism with a railway shovel, loading cars on the ground surface. In this cut are run the loading tracks for the big shovel, which follows the pilot cut on the rock surface. The loading tracks connect with the main line at both ends, giving the shovels run-around service. With 20-yd. air-dump cars in eight and ten-car trains, the big shovels have been able to load 4,000 yd. in an eight-hour day.

The entire line of the canal is to be paralleled by a double track standard gauge electric trolley railway 175 ft. west of its center line. Near the middle of the work is a Y from which a double track railway runs 2 miles to the main dump, which is capable of taking 20,000,000 yd. The hauling equipment consists of one hundred and fifty 20-yd. air-dump cars, twelve 600-volt direct-current 50-ton electric locomotives, and 7 steam locomotives. The maximum grade on the construction railway, which, when complete, will contain 40 miles of single track, is 1%, and the haulage equipment is capable of making 10 miles loaded and 20 miles light with 10-car trains at any point on the line.

The trolley wires are offset 7 ft. from the center line of the tracks to permit the loading of dump cars, and in order to pass locomotive cranes, of which there are three 40-ton and two 15-ton machines on the work.

The order in which the work was opened up was dictated both by the length of time required for the excavation and by the location of 3 existing railroad crossings. Two of these are close together, as may be seen from the map, a short distance south of the Whirlpool Gulch, a deep cut which it is believed was once the bed of the Niagara River. Just south of this gulch occurs the heaviest earth cut on the canal, a face of 100 ft. being encountered here for a short distance. The shovel that started in at the south face of this gulch has a 5-yd. dipper rigged to load cars on tracks 64 ft. above grade. It was possible to dispose of the excavation from this shovel to the extent of 1,500,000 yd. in the Whirlpool Gulch itself, making it unnecessary to cross a main-line railway in order to get to the central dump. Since the short section between the Grand Trunk Ry. crossing and the next crossing south was the location for the Y leading off to the main dump, and since it could therefore be excavated before the railway crossings were constructed, this point was selected for starting the other large shovel. With the excavation begun in this way, both shovels could be kept busy while the first bridge was being built. The construction railway will pass under these railway bridges, and sufficient clearance is provided for the large shovels by taking down the booms. The southerly shovel will be let out in this way and will proceed south, following the construction railway and the pilot cut for the loading tracks, until the overburden is completely stripped; being helped, in all probability, by the third shovel when it arrives. The loading tracks will then be lowered to the rock surface, a pilot cut will be made by the railway shovels, as in the earth section, and the shovel now operating at the Whirlpool Gulch will follow through, tak-

ing out the rock cut to grade. The other shovels will, on the completion of the earth excavation, turn north to meet it.

North of the Whirlpool Gulch the cut is almost entirely in rock, and there is a large forebay, approximately 300 by 1,000 ft., to be excavated. This rock will be removed by the railway shovels, of which there are two of 3½-yd. and one of 2½-yd. capacity. There are also two 7½-yd. caterpillar revolving shovels on the work.

The forebay excavation was begun when the two large shovels were started, in order to provide rock for track ballast and for concreting. As the heavy end of the rock excavation is near the forebay, and as little stripping had to be done, the main crusher plant was located here. The rock, which is Niagara limestone, will be used as aggregate for all the concrete. A concrete plant located at the lip of the gorge above the power house will be able to concrete the head house and power house by gravity. As these structures will not take more than 18 months to build, it has not been necessary to start them yet, and no work beyond the clearing of the building site has been undertaken at this point.

The remaining portion of the work, the dredging of the Welland River, is being carried on simultaneously by a 3-yd. dipper dredge and a large cableway operating a clamshell bucket. On account of bridges, houses and rough ground, the cableway was not able to start within 4,400 ft. of the intake, and the work between that point and the Niagara River will be done by the dredge, the material being scowed into the Niagara River. The cableway has an 80-ft. head tower and a 60-ft. tail tower, both travelling on railway trucks on parallel double tracks. The span is 800 ft., and the rig handles a 3-yd. clam. The head tower on the north bank of the river is set far enough back so that all the excavated material can be disposed of by dumping it on that bank. The total cut in the Welland River is to a depth of 30 ft. below the surface, but at 24 ft. below the surface a limited deposit of quicksand has been struck, which cannot be dug with any type of grab bucket yet tried on the cableway. It will probably be necessary to remove this quicksand with a dipper dredge.

As might be expected, the early construction of the railway bridges is essential to the prosecution of the excavation. The first started is the center one. This bridge will let the southern shovel out, and by the time it is finished there will still be sufficient time to construct the Grand Trunk crossing before the second shovel will be ready to come through with the rock cut.

To build these bridges, holes had to be dug in the ground, and steel sheet piling used for cofferdams. As shown in one of the photographs, the crown of the arch in the first bridge built is below the ground surface. This bridge is for the Niagara, St. Catharines & Toronto Ry. (electric), but the loading specified by the electric railway company was as heavy as that for either of the steam railway bridges.

The railway bridges each contain about 3,500 yd. of concrete, each being a single arch. This excludes the wing walls, which will not be placed until the canal excavation has been completed. Because the bridges are built below the original ground surface, the concreting proved easy. It was only necessary to set up a mixer with a loading hopper on the edge of the excavation and spout the concrete directly to place in the forms. The mixer at the first of these bridges was served

by a locomotive crane, material being received on a spur from the Grand Trunk Ry. The excavation was carried out with two derricks, the material being dumped around the cofferdam.

The first rock excavation available was at the lower end. The forebay excavation was begun by shooting out a 10-ft. lift over the entire area, about 1,100 holes being fired at once. About one pound of dynamite to the yard, including that used for springing the holes, was used. Each hole was sprung with 5 or 6 sticks and loaded with 15 or 20 sticks, the spacing being 7 ft. each way. Several experiments with blasting caps wired up in various ways were tried in an adjacent open field, to make sure that the loaded holes would be fired simultaneously. The firing was done with a high-amperage but low-voltage current thrown with a single switch. As a result of this blast, about 60,000 yd. was broken fine enough to be handled by the railroad shovels.

The crusher plant near the forebay receives material by rail in the 20-yd. dump cars. These discharge direct into a large hopper lined with 2½ x 6 in. steel bars laid flat, and feed a 60 x 84 in. jaw crusher operated by a 250 h.p. motor. This crusher reduces the stone to 8 in. size and delivers it to a belt which takes it to the top of the secondary crusher house, where it is fed into 3 gyratory crushers that reduce it to 2 in. size. From these crushers the material passes through a screen which removes dust and oversize aggregate, and is then carried on a suspended belt conveyor over the storage pile. At the end of the storage pile is the bin structure for the receipt of 1 in. stone to be used for reinforced concrete work. The 1 in. material is obtained by bypassing the oversize aggregate, after it leaves the screen, into a small auxiliary gyratory crusher, which delivers its product directly into the bin mentioned above. Under the storage pile is a gallery containing another conveyor for delivering stone to the concrete plant, which it is planned to build as shown in the layout drawing.

The rock-excavation work on the canal itself is carried out in such a way as to produce smooth sides and secure the maximum flow. It is the intention to channel the rock down to the water line in advance of blasting, and to break the rock back below this face so as to allow for a 6 in. lining of concrete throughout the entire flow section. There are 15 duplex channelers cutting to a depth of 20 ft. at one operation on the work, most of them being at present employed around the forebay. The channelers and the tripod drills are operated by compressed air delivered by a 10 in. pipe.

There will be 12 motor-driven compressor units, having a total capacity of 12,000 ft. per minute, on the work. A capacity of 8,000 ft. is concentrated at the Whirlpool station in the center of the work now in progress, and the other 4,000 ft. is located at Montrose station at the southern end of the line. Six of these machines are now in operation at the first mentioned station, where one of the main transformer substations for the work is also situated. After-coolers are used on the compressors, and it has not been necessary to employ reheaters, although these may be resorted to in cold weather. At present the loss of pressure in delivery from the central station to the drills is about 3 lb. per sq. in., the drills taking air at a little more than 100 lb.

Because plenty of electric power was available, and because shipments of coal are becoming more and more difficult to

obtain promptly, electric power was used wherever possible on the work. As stated, the haulage equipment uses 600 volt direct current, transformed by rotary converters at the central stations. The other equipment uses 440 volt alternating current, the lines to the two large electric shovels carrying current at 4,000 volts to transformers on the shovels themselves. For the smaller plant units the current is stepped down before being delivered to the machine.

For organization purposes, the work,

which is being done entirely by the Hydro-Electric Power Commission's forces, has been divided into four sections. The first of these includes the deepening of the Welland River. The second is the portion of the main canal from station 0 to station 235, the third is the other half of the main canal from station 235 to the forebay, and the fourth section includes the power house, gatehouse and the forebay itself. Sir Adam Beck is chairman of the commission, for which F. A. Gaby is Chief Engineer, H. G. Acres Hydraulic

Engineer, T. H. Hogg Assistant Hydraulic Engineer and M. V. Sauer Designing Engineer. The work is in charge of J. B. Goodwin, Works Engineer, under whom G. H. Angell is General Superintendent and A. C. D. Blanchard Field Engineer. F. W. Clark is Assistant Field Engineer, R. T. Gent Plant Engineer, and William Snaith Office Engineer. C. F. Whitney is resident engineer on Divisions 1 and 2, George Lowry on division 3, and W. S. Orr on division 4.—Engineering News-Record.

## The Business Box Car.

By W. J. Bohan, Mechanical Engineer, Northern Pacific Railway.

I will begin this paper with a specific definition of a railway. A railway, opinions in some quarters to the contrary notwithstanding, is an institution of public necessity, founded, maintained and operated for the purpose of efficiently conducting transportation to the satisfaction of its patrons in such a manner that the physical qualities of the property and equipment may amply meet the imposed demands and a fair dividend on the investment be realized.

One of the principal factors necessary to the conducting of transportation is box cars. An impression of the importance of box cars as they affect dividends can be gained from the following facts: A total of 261,100 box cars were owned and operated by eight leading western and northwestern railways in the U.S. during the last year, or an average per road of approximately 32,600. The total number of box cars represents 50.7% of the total freight cars owned by the roads. These box cars may fairly be said to represent an original investment of \$210,000,000.

The total average cost of repairs per road per year for a 4-year period for all classes of cars on the roads was \$3,481,000. The average cost of repairs per car per year was \$64.00. The minimum cost per car per year for one of the roads was \$41.00. The maximum cost per car per year for one of the roads was \$110.00, a difference between minimum and maximum cost per car per year of \$69.00,—\$5.00 more than the average cost of repairs per car per year for all the roads mentioned. The character of transportation on each of these roads is the same, and the ratio of the number of box cars to the total number of freight cars of all classes is closely approximate, and it is fair to assume for the purpose of this paper that the above repair cost ratios for the different roads would obtain for box cars.

The claims paid for losses due to grain leakage by a large grain carrying line of the same group of roads for four years ending in 1917, averaged \$80,000 a year, grain being carried in both owned and foreign cars. The average damage claims paid per year on account of defective equipment on all commodities other than grain for the same period was \$17,000. A stockholder of an enquiring turn of mind, the chief operating official, or the president of one of these railways, invariably of an enquiring turn of mind where earnings are concerned, in view of the high loss and damage costs and wide difference in repair figures, would be justified in asking, "What is the matter?" Several things are the matter, and one of them is undoubtedly lack of business balance in car construction—box car construction—that being the type of car under consideration.

Years of mental and physical energy have been spent on box car design by the best and most loyal of men, both technical and practical, as volumes of records of the M. C. B. Association and technical periodicals will bear testimony of; and a generally satisfactory box car is not yet with us. Have we kept it back by a flux of figures on stresses and strains, lacking the leaven of sound engineering judgment? Have we delayed its coming by building upon too narrow conceptions of the problem, likened to the opinions of the six blind men of Hindustan regarding the physical make up of the elephant? Have we co-operated with each other sufficiently in treating a large subject in a large way, by exerting our energies toward a broad and careful analysis of the subject, with full realization that box cars are business agents of the railways that own them, and that their dividend earning capacity depends upon their commercial efficiency as well as upon their mechanical details, and that the two qualifications are correlated? The fact that we have not the generally satisfactory box car indicates at least that the progress of its development has been slow. The time has arrived when we must develop an efficient box car in its fullest sense. Stress of times, public opinion, unusual volume of business of many varieties, shortage of equipment, scarcity of labor and material with constantly upward trend in prices of both, demand it.

What have we to offer in the way of a business box car? The business box car must be free from leakage of lading, weather proof and practically fire proof, have a so-called non-sweating interior free from projections and pockets, be easily accessible, have properly dimensioned door openings and substantial free positive functioning doors and fastenings, and so constructed as to lend itself to diversified lading, with incident supplementary doors, blocking, etc. In short, a car popular with the shipper,—a dividend earning unit having a maximum demand. It must, in addition to these qualities, have a minimum light weight, a maximum utility and carrying capacity per unit of weight, reasonable first cost, and freedom from the repair track.

Two principal elements enter into the design and construction of such a car. First, accurate technical engineering information, and second, sound, practical business judgment based upon experience, the latter largely predominating, for the reason that evidence is lacking to date that anyone ever reduced the things that happen to a box car to conclusive figures. There are some examples of car construction in operation in this country today that create the impression that cars are sometimes figured to death. I do not

wish to belittle either figures or figurers, but I do wish to say that figures are very valuable material, and even figurers should use them carefully.

In a recent article in one of the railway periodicals, a statement in substance is made that in train service the car body has three movements, all of which absorb a part of the force applied at couplers. This is true as far as it goes, and if this were all, figuring would be comparatively easy. It, however, stops where the real trouble begins. The fact of the matter is that the box car is subject, not only to these three forces, but to the resultant of their combined action and many others of such varying direction, intensity and rapidity of occurrence that their accurate mathematical determination is out of the question. Among these forces may be mentioned those due to poorly balanced design, unevenness of track, curvature, centrifugal force, train handling, draft action, irregular lading, shifting of lading, atmospheric conditions, etc.

Briefly, all of these forces combine in what may be called "team work" against the life of the box car. Close observation and experience with a large number of different types of box cars indicate that the general and greatest result of this team work manifests itself in twisting the car. Such being the case, team work in an opposite direction by the various members of the car must be the natural antidote. I believe the most economically efficient box car to be one in which every detail, even the grab irons, is made to do its fair share in assisting the natural functions of the car and resisting the stress and abuse to which it is exposed. The body of such a car should not be built around any one member, but all of its members should form a unit, having maximum inherent strength and resilience, and acting as a unit in dissipating all reasonable strain action. It should have the fewest possible primary and special parts, so that joints, gussets, rivets, bolts and fastenings which work and wear to the detriment of the car, increase its cost of upkeep and loss of time on repair tracks, may be reduced to a minimum.

A general specification for a car that would meet the requirements outlined would be briefly as follows: The weight for say a 40 ft., 40 ton box car should be between 45 and 50% of the stencilled capacity. I should say it should not exceed 48%. This weight can be obtained without sacrifice of strength.

In connection with the matter of efficient weight: The electric motor builder designs a standard motor to handle 25% overload rating for 2 hours without abnormal stress. This rating is the result of careful engineering and experience in all the electrical, mechanical and commer-

cial phases of electric motors. There seems to be no reason why box car design should not be determined upon the same relative basis. It is, of course, to be understood that a 25% overload rating is not the correct rating for a box car. I have never believed that a railway could earn as much money hauling 25 tons of tare per unit of revenue producing load, as it could by hauling 20 tons of tare per the same unit of revenue producing load.

The body should be steel frame throughout, preferably pressed steel of resilient quality. The underframe, sides, ends and roof should be diagonally braced throughout. There is no question about the efficiency of diagonal bracing. Its value has been many times demonstrated in the reclamation of thousands of old cars. As the diagonal bracing of the entire construction, as previously mentioned, will distribute the strains due to live load and shocks to all members of the car, the fish belly type of center construction is not necessary. Ten inch center sills of ordinary cross section are sufficient.

Side and end posts and braces at the points of attachment with sills and plates, underframe bracing at the points of attachment with center and side sills, and roof bracing at the points of attachment with ridge pole and plates, should be directly connected, i.e., the usual construction using gusset plates or other secondary members should be eliminated, as the strength and efficiency of the car can be materially increased by so doing, and unnecessary parts eliminated. Auto-genous (electric or oxyacetylene) welding may be used to material advantage in such a construction.

Diagonal underframe bracing at the ends should be securely tied to both center and end sills at their junction, and extend continuously around the ends of the body bolster and cross ties, with alternate connections to center and side sills. The same general construction may be followed in the roof for the attachments of diagonal bracing and plates, ridge pole and door carlines. At the door openings, underframe should be substantially reinforced by supplementary diagonal bracing. The plate may be similarly reinforced above the door, or the door track constructed to form the reinforcement. The roof reinforcement at the door openings may be made by the use of carlines at the door posts. The end construction with its attachments to end sills and plates, is similar to the side construction.

The corner posts should be formed by directly connecting the end side post and side end post members throughout their entire length. This will not only tie the car together securely, but it will materially assist in forming an integral construction. The corners may be further reinforced by continuous corner and end grab irons.

Side and end sheathing should be constructed of 2 sections of sheet steel, their junction reinforced by plates, and all securely riveted together, forming side and end girths, the girth reinforcing plate extending continuously from side door post to side door post around the end of the car. End and side lining should be of matched lumber, sides  $\frac{3}{4}$  in. or 13/16 in., ends 1  $\frac{1}{4}$  in., the lining extending from floor to plates. The floor may be of the usual 1  $\frac{1}{4}$  in. matched stock secured to furring of underframe, using standard grain strips at intersections of floor and sheathing.

The roof should be of the circular type and may be constructed of 2 sheets of no.

16 steel, running lengthwise of the car, with joint at ridge pole, the 2 roof sheets being securely riveted between the ridge-pole and a weather proof ridge-pole cap. The roof sheets should also be securely riveted to the diagonal braces, end and side plates, thus forming an integral member of the car capable of sustaining its share of the load. It is necessary that the inside of the roof be what is commonly called "non-sweating." This can be taken care of by the application of a heavy coat of ground cork and red lead or mineral paint applied to exposed metal surfaces.

The door should be of steel, framed and sheathed similar to the body of the car, and mounted with weather-proof shields at posts and plates.

The truck should, like the body, have as few parts as possible and be preferably of the cast steel type.

Particular attention should be given the brake beam mounting, to ensure even brake shoe wear and proper alignment of levers and rods. All of these points are of extreme importance, not only in that they may perform their special functions properly, but that irregular transmission of stresses to the car itself be avoided as far as possible.

Brake equipment of standard makes is quite satisfactory. Special attention, usually lacking, to secure proper application and alignment of parts, is absolutely necessary to obtain safe and efficient results.

Draft gear should be of the friction type, having a minimum recoil action, which should be just sufficient to readjust the parts in release. Travel should be approximately 4 in. The shock dissipating capacity should be the maximum obtainable with prescribed travel and standard clearance conditions. The draft lug fastenings should approach strength sufficient to resist maximum shocks regardless of draft gear capacity.

The holes in framing should be die punched to templates. All rivets and bolts should be of the best quality obtainable and of full cross section. Bolts should have properly proportioned heads and clean cut and accurate threads to provide for wrench fit of nuts. Nuts should also be of best quality and manufacture. Application of both rivets and bolts should be made without drifting, rivets having full and concentric heads and driven at proper temperature. Double nuts, lock nuts, cotters and split keys, where used, should be given special attention. I consider a good design of nut lock superior to a cotter or split key, on account of extreme difficulty in getting proper application of cotters or split keys. No one little thing is a source of more trouble on a car than loose nuts.

Too much stress cannot be placed upon the importance of more careful practical engineering study of both general and detail design to secure a well balanced, resilient car unit. Some manufacturers have done a great deal of excellent work in this direction, on underframes, but have not, in my opinion, extended the resilient features far enough, as there is no reason why it should not extend to the entire superstructure. Particular attention should also be given to the selection and assembly of the best material obtainable.

In conclusion, it must always be borne in mind that the most efficient business box car is one so constructed and assembled that it will afford a maximum resistance to the development of chronic conditions arising from general and not maximum service stress. Such a car rea-

sonably maintained will have the physical strength to take care of reasonable maximum stress and at the same time represent a minimum first cost and up-keep, and be commercially efficient.

The foregoing paper was read before the Western Railway Club in Chicago.

### Sound Advice to Railway Men.

G. A. Hoag, Superintendent, Canadian Northern Ry., Capreol, Ont., issued the following bulletin recently:—

As a railway man, have you the gambling microbe? What has it done for you? Any good? Any harm? Stop and think! This microbe is like all other microbes, making use of every moment, increasing, spreading; spreading at an alarming rate when once it gets a start on you or me, and we have not backbone enough to see the red flag ahead and answer its call. Stop again and think of how many accidents this microbe has caused. If we only knew the trouble it has caused. How? By some one employe not taking his proper rest before starting out on a run, etc. If you have this microbe, flag it; flag it quick, before it is too late, and results in some accident, the cause of which never comes out (although such knowledge many a man carries under his smock and jeans). Do you want to have that weight to carry around all your life? Gambling, poker playing, etc., are some of the surerest methods of keeping men poor, keeping them down, causing them to be morose. They lead to other crimes and ruin many a clever man's career. Wise men do not gamble. Are you unwise?

Railway life may be, and is, a little rough. Are you trying to iron out the rough spots? Are you trying to help the other fellow? Is there the need of the rough, foul language we hear spoken so thoughtlessly, not perhaps before our own families, but often heard by the other man's wife and child? By the way, do we look at it the same as if our own heard such language? Or perhaps it makes no difference who hears the words thus thoughtlessly spoken. This is a weakness, and is so looked upon by the strongest men. Can you afford to let your weakness get the better of you, or can you flag this weakness in yourself? Will you try it? Strong men are usually simple of speech. Profanity drives the better away and draws the lower to you.

How many men are honest all the time; honest with themselves; honest with the other fellow; honest with themselves as to their health; in their habits; honest with their mates and their fellow men at all times and in all things. How many of us are willing and sometimes anxious to get something for nothing? This again perhaps thoughtlessly; but is it fair? Is it honest, after all?

These are little notes which I hope will be taken as they are meant. Just a few facts to think over and to help us to help each other. Try them. Think them over. Ask yourself if they fit in anywhere. If they do, and you improve by them, you are the winner. Do not let the red flag fade!

Carriage of mails by railways.—The Board of Railway Commissioners gave notice of a sitting in Ottawa for Nov. 19 to hear the application of the C.P.R. and G.T.R., on behalf of those and other railways, asking that the board fix fair and reasonable rates for the carriage of mails, but at the Post Office Department's request the hearing was postponed to a date to be fixed by the board.

# Central Vermont Railway Co's Annual Report.

Following are extracts from the report for the year ended Dec. 31, 1917.

Gross receipts ..... \$4,816,577.55  
Operating expenses ..... 4,022,047.46

Balance . . . . . \$ 794,530.09  
Taxes . . . . . 207,009.16

Net debit from rentals, etc. .... \$ 587,520.94  
73,066.04

Hire of equipment—  
Credit balance ..... \$ 514,454.90

Interest on securities held by company ..... \$ 526,167.59  
50,386.61

Fixed charges . . . . . \$ 576,554.20  
731,283.34

Net result, deficit . . . . . \$ 164,729.14

	1917.	1916.
Freight . . . . .	861,219	1,054,674
Passenger . . . . .	1,974,207	1,117,924
Mixed . . . . .	88,914	95,129
Special . . . . .	2,171	2,941

Total revenue miles .... 2,026,511 2,261,668  
Non revenue . . . . . 44,153 32,439

Total . . . . . 2,070,664 2,294,107

Passenger 4,888,464 Decrease from 1916 88,277  
Freight..22,246,918 Decrease from 1916 5,828,477

The percentage of expenses to earnings was 83.50 as compared with 72.20% in the preceding year.

**Traffic.**—The number of tons carried one mile was 267,482,693, a decrease of 59,308,745; the earnings per freight train mile were \$3.49, an increase of 43c. and the earnings per ton mile 1.20c, an increase of 0.19c.

The number of passengers carried one mile, 41,165,036, shows a decrease of 1,691,179; the earnings per passenger train mile \$1.27, an increase of 9c, and the earnings per passenger per mile 2.60c, an increase of 0.12c.

**Maintenance of Way and Structures.**—On the First District 4.5 miles of new 80 lb. open hearth rail have been laid between Evarts, Vermont, and White River Jct., Vt., and 8.1 miles have been laid with relaying 80 lb. rail, replacing lighter weight rail. On the Third District 26.4 miles new 80 lb. open hearth rail have been laid as follows—15.3 miles between White River Jct. and South Royalton, 4.7 miles between Essex Jct. and Burlington, and 1.9 miles between Oakland, Vermont and Georgia, 7.3 miles relaying 80 lb. rail have been laid relieving lighter weight rail.

Industrial tracks to extent of 8,132 ft. have been constructed, and 4,635 ft. additional yard tracks have been built.

Three grade crossings at Montpelier have been eliminated by an overpass, and new highway and a grade crossing in Willington, Conn., has been discontinued.

A building has been constructed at St. Albans for accommodation of U. S. Immigration Department, and for a part of our audit department staff. A new combination freight and passenger station was erected at Riverton to replace structure destroyed by fire. A 3,000 ton capacity ice house was built at St. Albans to store sufficient ice to meet the increased requirement.

New modern 150-ton, dead-rail, track scales have been installed at Palmer, Brattleboro and White River Jct.

New steel bridges have been erected at Three Rivers, Montague, Millers Falls, Gill and Milton. Bridge 21, Williams-town, a trestle structure, was rebuilt

with steel and 7 trestle bridges, aggregating 309 ft. in length, have been renewed. Sixteen other bridges received extensive repairs.

**Maintenance of Way and Equipment.** During the past 18 months there were purchased and put in service one 10-wheel superheated passenger locomotive of our 218 type, and 6 consolidation superheated freight locomotives of modern design—these locomotives weighing 192,000 lbs. on drivers and having a tractive power of 49,500 lbs., have given extremely satisfactory service, both as to their

	1914	1915	1916	1917
Tons one mile . . . . .	314,478,346	292,446,458	326,791,438	267,482,693
Tons per train mile . . . . .	226.91	250.58	277.30	278.33
Tons per loaded car mile . . . . .	14.44	14.05	14.64	15.51
Miles . . . . .	3,242,225	2,919,557	2,970,898	2,720,960
Freight earnings . . . . .	2,981,316.28	2,898,881.44	3,290,654.75	3,214,417.38
Passenger earnings . . . . .	1,072,912.07	1,008,427.42	1,063,403.53	1,069,747.79
Total earnings . . . . .	4,372,765.42	4,260,598.53	4,811,329.64	4,816,577.55
Car miles loaded . . . . .	21,771,265	20,814,804	22,324,264	17,261,131
Car miles empty . . . . .	8,664,276	8,293,951	7,512,920	6,226,981

hauling capacity and as to economical operation. In continuing the work indicated last year, 3 more compound consolidation locomotives of the 400 class have been converted to simple superheated locomotives with highly satisfactory results. Ninety locomotives have received heavy repairs and 202 light repairs. The benefits derived from the improved condition of our motive power have been clearly demonstrated. The past winter is reputed to have been the worst in history and notwithstanding the severe strain on the locomotives during that season, we have been enabled to handle the heaviest business on record this spring without delay.

During the period covered by the report 2 new steel mail cars were purchased. In St. Albans shops 6 steel under-frame milk cars, 11 box cars and 2 snow ploughs were constructed, 167 freight cars had steel draft equipment applied and metal roofs were placed on 219 cars.

**Operating Results, Etc.**—In December, 1917, the U. S. Government took over the operation of the railways and your company has been under government direction since that time. Although a tentative operating contract has been submitted, nothing definite has been agreed upon. When the time arrives it will be necessary to act, and a resolution will be submitted to this meeting giving the board authority in the premises, and appointing such officer as you may designate to negotiate and execute the contract on behalf of this company. Under the terms of the proclamation the Government takes over "each and every system of transportation, and the appurtenances thereof located wholly or in part within the boundaries of the continental U. S." Whether it is the purpose of the government to include the roads owned and operated by this company in Canada is yet to be determined.

During 1917 application was made to the Central Vermont Transportation Co., a subsidiary of your company, for the sale by the transportation company of the steamships Manhattan and Narragansett, which were originally built to run between Providence and New York. Negotiations following this application were terminated when on Jan. 1, 1918, the U.S. Shipping Board commandeered the boats for the government. Hearings have been had before the Shipping Board

to determine the compensation therefor, but no conclusion has been reached. Claim was made by the company that it should be allowed the original purchase price, plus the cost to date, amounting for both boats to \$1,638,252.08. It is expected that a definite order will be made in the near future. There was outstanding against the boats at the time they were commandeered, a first mortgage obligation of \$450,000.

The report of operation of the company for 1917 shows a deficit of \$154,729.14 after paying fixed charges. This

is due to increased cost of labor, coal and material. The increase in the items of either wages or coal alone would more than account for the deficit. It will be interesting in this connection to study the subjoined statement showing a comparison of operating data for 1914, 1915, 1916 and 1917, from which it appears that while the total revenue for the past two years was substantially the same the locomotive miles decreased 250,000 miles; the loaded car miles decreased 5,073,133 miles, and the empty car miles decreased 1,285,939 miles, showing the efficiency of the road has been maintained and increased, and that under normal conditions the property would have shown an exceedingly handsome profit.

## Quebec Central Railway's Annual Report.

The Q.C. Ry.'s report for the year ended June 30, 1917, gives the following results.

Revenue . . . . .	\$1,926,403.79
Operating expenses . . . . .	1,424,558.62
Net revenue . . . . .	501,845.17
Other income . . . . .	5,600.53
Interest on debenture stock and mortgage bonds . . . . .	257,560.94
Surplus income balance from 1917..	\$249,784.76
Balance net revenue account . . . . .	\$87,544.99
	249,784.76
	\$337,329.75
Dividend on share capital . . . . .	169,080.16
Balance . . . . .	\$168,249.59
Appropriation for additional equipment, betterments and improvements to property..\$30,000	
Transfers to reserve contingent fund . . . . .	50,000 80,000.00
	\$88,249.59

The company's property was leased to the C.P.R., Oct. 2, 1912, for 999 years, at a guaranteed rental based on the interest on the outstanding 1st, 2nd and 3rd mortgage bonds, and 4% dividend on the outstanding stock for 5 years from July 1, 1912, and 5% afterwards.

The officers and directors for the current year are: Grant Hall, Montreal, President; I. G. Ogden, Montreal, Vice President; J. H. Walsh, Sherbrooke, Que., General Manager; A. D. MacTier, Montreal; L. A. Carrier, Levis, Que.; T. Lindley and C. D. Brassey, London, Eng. H. C. Oswald, Montreal is Secretary.

## The Canadian Engineers' Splendid Work on the Western Front.

The overseas correspondent of Canadian Press, Ltd., in writing from the Canadian forces headquarters on the western front recently said:—"Much of the success of the operations of the Canadian Corps opening on Sept. 27, was due to the splendid work of our engineers. The engineering preparations for the Bourlon Wood operations were undertaken on five days notice, and were exceedingly difficult owing to the nature of the ground. On the front over which the Canadian Corps attacked, the way was barred by the Canal du Nord, 100 ft. wide, with banks up to 15 ft. in height, the water in many places being over 8 ft. deep, and with the River Agache, 15 ft. wide and 8 ft. deep, parallel and close to the canal.

"The problem confronting the engineers in preparing for the attack involved the repair of roads demolished by shell fire; the pushing forward of cross country tracks for infantry and horse transport to the front line; the pushing forward of light tramways to the front line to facilitate the delivery of ammunition stores and supplies; the provision of engineer material of all sorts, and the construction of new headquarters for battalions, brigades, divisions, etc., and dugout accommodation and shelters as quickly as they could be improvised. A difficult question was the provision of water supply for the large number of horses, approximately 40,000 assembled in a very congested area.

"The problem was to get the infantry and the guns over the canal in the face of enemy barrage and to provide sufficient facilities in the way of roads, bridges, tramways, etc., which would ensure the supply of ammunition for the guns being sustained and the supply of stores, munitions and rations for the large number of troops engaged. As it was clear that the enemy's barrage would fall naturally on the canal and be retained there, the following were provided for: Seven infantry foot bridges of an unsinkable type; 10 crossings for guns and horse transport, 5 of which had to be developed at once for heavy traffic, even while the continuous stream of guns and ammunition wagons was pouring over them. At least ten times Canadian engineer officers flying at a height of about 500 ft. traversed the length of the canal involved, reconnoitering for the best spots for tank crossings, bridge sites and infantry crossings.

"Great were the preparations. Following were the results: Before 'zero' hour 18 miles of roads had been repaired up to the front line and 7 miles of tramways constructed. On these tramways over 3,000 tons of ammunition a day were being delivered to advanced dumps and gun positions. The huge concentration of horses was provided with the necessary water supply. After 'zero' all crossings were put through successfully, in spite of heavy gun and machine gun fire. The attack kicked off at 5.20 a.m., and the first guns crossed the canal at 8.40 a.m.

"The engineers went over with the infantry to get their footbridges across, and the engineer wagons, with their 6 horse teams, were pushed forward so rapidly that in several cases all the horses were killed by machine gun fire, and the

men got their material down to the bridge sites by man-handling the wagons. In one case a party of Boche machine gunners, who had been overlooked by the mopping up parties, emerged from a concealed tunnel, and attacked the engineer party attempting to bridge the canal. The engineer officer in charge took part of his men and beat off the attack, and at the same time kept the work of construction going without interruption.

"The bridges constructed were of all types: pontoon, trestle, heavy pontoon and heavy steel bridges for all traffic. A remarkable record was made in the erection of two heavy steel bridges of 110 ft. span under heavy fire. The materials were got on the sites at 2 p.m., and the approaches were prepared and the bridges erected and open for heavy work in 12 hours actual labor.

"By 2 p.m. three new pumping installations had been installed on captured ground and sufficient horse troughs to water 5,000 horses an hour. All materials were got forward to the infantry and the positions gained consolidated. About three miles of tramways were constructed and in operation, and over 1,000 wounded were evacuated on returning ammunition trains operated by Canadian Tramways Corps.

"The battle of Bourlon Wood was an engineers' battle. The success of the whole operation depended on the speed with which the necessary crossings of the Canal du Nord were provided, and the way in which they were maintained and improved during the day, so as to enable the guns and infantry to be maintained in the positions which they had reached in their advance.

### Railway Equipment for U.S. Naval Guns on the Western Front.

Press dispatches from France detailing the destruction wrought back of the German lines by huge naval guns operating with the French and United States forces make it possible now to disclose some particulars of these guns and how they were built, which has been a jealously guarded secret.

They were originally intended for the new battle cruisers, but a change in the design of the cruisers left the guns available for other use, and as there was in the navy no immediate need for them afloat, the chief of the Navy Bureau of Ordnance recommended that they be placed on railway mountings for land service with the armies in France. He felt that if the guns could be placed upon railway mountings, that would make them readily mobile like the British and French naval guns of smaller caliber, they would prove a valuable adjunct to the U. S. artillery forces overseas, and he was directed to proceed with the design and construction.

The U. S. naval guns throw a heavier projectile and have a greater muzzle velocity than any previously placed on a mobile shore mounting. From the first it was seen that in order to make the project successful, the railway battery must be made completely mobile, so that it might operate without being based at any one particular spot. For this

reason, it was necessary to provide not only the railway cars mounting the guns, but also locomotives and cars sufficient to accommodate all the operating personnel of the expedition, together with the ammunition, repair shops, cranes, stores and miscellaneous material. The final plans and specifications which were prepared at the Naval Gun Factory, Washington, were completed in less than 30 working days, being ready for submission to the bidders about Jan. 25, 1918.

Large mounts were to be built, capable of taking these big caliber guns, each mount with its accessories to be operated as an independent train. The equipment included locomotives, gun cars, ammunition cars, crane cars, construction, sand, timber, berthing and kitchen, fuel, workshop, and staff radio cars, car for officers, battery headquarters and miscellaneous purpose cars. The locomotives built for this purpose were standard consolidation type with 4 pairs of drivers. The weight of the locomotive alone is approximately 83 tons and the weight of the tender approximately 56 tons. A form of pit foundation was provided to enable the guns to be fired at high angles of elevation. The removal of the gun from over the pit formation and its restoration to complete mobility is but the work of a few minutes. The entire amount is covered with armor plate, 1,600 sq. ft. of plate being required. By shifting the position of the gun mount on the tracks the gun can be brought to bear on any desired target and the proper angle of train obtained.

The car equipment is unusually complete. One car is a complete machine shop, with every facility for repairs, with blacksmith forge and anvil, lathes, shapers, grinders, and drill presses. Ammunition cars are heavily armor plated. The kitchen cars have complete cooking and serving apparatus; the berthing cars have folding bunks for the men, and other cars carry complete sets of spare parts.

Every effort was made to secure rapid construction, work being begun the day the contracts were awarded. The Baldwin Locomotive Co. built the locomotives and the Standard Steel Car Co. the box cars. The huge steel girders were fabricated by the American Bridge Co., some of the plates being so large they could not be produced at its Pencoyd works and had to be manufactured in Pittsburgh. Work at all these plants proceeded night and day, and the material and completed mounts and cars were produced in record time. Many of the important parts of the gun mounts were made at the Naval Gun Factory, Washington, which worked under forced draft, and had its part of the work done ahead of schedule, as did the other builders. The first gun, mounted complete, left the Baldwin shops April 25 for the army proving ground at Sandy Hook, where the tests were made in the presence of officers of the Army and Navy and of the allied governments.

These guns are all manned and operated by officers and men of the U. S. Navy. The first party of officers and men for this expeditionary force arrived in France June 9; the first shipment of material left the U. S. on June 20, and the entire organization was completed and ready to move to the battle front in France late in August. This battery was in action at the front for the first time on Sept. 16, and continued in active operation until the armistice.

# Wages of Railway Maintenance of Way Employees.

Following is a copy of Canadian Railway War Board agreement 2, entered into Nov. 8:—

Agreement between the Canadian Railway War Board and the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, in respect to increases in rates of pay and certain conditions of service in conformity with terms of Supplement 8, General Order 27, of the Director General, United States Railroad Administration, for employees in the maintenance of way department.

1. This agreement shall be effective on the following railways:—Canadian Government, Canadian Northern, Canadian Pacific, Dominion Atlantic, Esquimalt & Nanaimo, Fredericton & Grand Lake, Grand Trunk, Grand Trunk Pacific, Halifax & Southwestern, Kettle Valley, New Brunswick Coal & Railway, Quebec Central, and on other railways under the jurisdiction of the Canadian Railway War Board, as defined in article 4 of this agreement.

2. The rates of pay and conditions of service defined herein shall be effective from Sept. 1, 1918.

3. (a) The rates of pay for the various classes of employees in the maintenance of way department on the railways specifically named in article 1 of this agreement shall be as follows:—

rates not less than the equivalent of \$115 a month.

(d) In cases in which mechanics and helpers to mechanics in the maintenance of way department were on Jan. 1, 1918, prior to the application of any increase effective that date, receiving less than 40c per hour and 30c per hour, respectively, basic minimum rates of 40c per hour and 30c per hour, respectively, shall be established, and to these basic minimum rates and all rates of 40c per hour and 30c per hour, respectively, and above, 13c per hour shall be added, establishing basic minimum rates of 53c per hour and 43c per hour, respectively.

(e) The rates of pay defined in clause (a) of this article for the various classifications of employees named shall be applied only on the railways named in article 1 and in the territories on such railways where such classifications are specified in existing or immediately preceding schedules.

(f) Classifications of employees specified in existing or immediately preceding schedules on any railway named in article 1 in any territory on such railways, and not named in clause (a) of this article, shall be maintained on such railways in such territory. The rates of pay for such employees shall be increased over the rates of pay in effect Jan. 1, 1918, prior to the

ernment, Canadian Northern, Canadian Pacific, Grand Trunk and Grand Trunk Pacific, the rates for yards of similar size and character on the railways named shall be used.

4. (a) On railways under the jurisdiction of the Canadian Railway War Board, other than those specified in article 1 of this agreement and which participated in the increase in freight rates provided for in order in council 1863 effective Aug. 12, 1918, the rates of pay of maintenance of way department employees shall be increased over the rates of pay in effect Jan. 1, 1918, prior to the application of any increases effective that date, by \$25 a month on monthly rates, 96c a day on daily rates, or 12c per hour or 13c per hour on hourly rates according to classification, provided, however, that all sectionmen shall be paid an hourly rate and receive an increase of 12c per hour on their equivalent earning per hour as at Jan. 1, 1918, irrespective of the basis, i.e., monthly, daily, or hourly, on which they have previously been paid, with a minimum of 28c per hour and a maximum of 40c per hour; and provided further that bridge and building, painter, mason, concrete, bricklayer and plasterer foremen shall receive rates not less than the equivalent of \$115 a month, that section foremen shall receive rates not less than the equivalent of \$100 a month, that pile driver, ditching and hoist engineers shall receive rates not less than the equivalent of \$105 a month, and that mechanics shall receive a minimum of 53c per hour, and helpers to mechanics a minimum of 43c per hour.

(b) Articles 2, 5, 6, 7, 8 and 9 of this agreement shall also apply to the railways covered by this article.

5. Eight consecutive hours, exclusive of the meal period, shall constitute a day's work.

6. (a) Overtime shall be computed for the ninth and tenth hours of continuous service, pro rata on the actual minute basis, and thereafter at the rate of time and one-half; provided, however, that in the event of the Director General, U.S. Railroad Administration, issuing any supplement or interpretation specifying some other basis for the payment of overtime for maintenance of way employees, such other basis shall be effective in the same manner and from the same date as made effective on the U.S. railways, but not prior to Sept. 1, 1918.

(b) When notified or called to work, outside of regular working hours, employees shall be paid a minimum allowance of 3 hours straight time.

(c) In computing overtime rates per hour for monthly and daily rated employees, fractions of a cent, one-half or over, shall be counted at the next cent above, and fractions of a cent less than one-half at the next cent below. For hourly rated employees fractions of a cent, one-quarter to one-half inclusive, and three-quarters or over, shall be counted at the one-half cent and the next cent above respectively, and fractions of a cent between one-half and three-quarters and less than one-quarter shall be counted at the half-cent and the next cent below respectively.

7. The provisions of this agreement shall supersede any provision in existing or immediately preceding schedules which conflict therewith.

8. The increases in rates of pay provided for herein are effective as from

(b) The rates of pay as specified herein shall, except as otherwise provided, be the maximum rates, and it is agreed that for classes of positions for which existing or immediately preceding schedules provide a range of rates, such range of rates shall be continued in effect with the same differentials below the maximum rates as have previously existed.

(c) In cases in which shop and yard foremen carpenters under existing or immediately preceding schedules receive a rate of pay above or below the rates paid bridge and building foreman, the same differentials shall continue in effect, provided, however, that they shall receive

application of any increases effective that date, by \$25 per month on monthly rates, 96c per day on daily rates, or 12c per hour or 13c per hour on hourly rates according to classification.

(g) On railways and in the territories where under existing or immediately preceding schedules it has been the practice to pay the two pump rate to pumpmen on single pumps where two men are employed, on single pump where water is treated, or on single pump and doing coal hoisting, the practice shall be continued.

(h) In applying the rates of pay for section foremen in 1st to 4th class yards on railways other than the Canadian Gov-

Sept. 1, 1918, and are to be paid according to the time served to all maintenance of way department employees who were then in the service, or who have come into the service since and remained therein. The proper ratable amount shall also be paid to those who have been for any reason since Sept. 1, 1918, dismissed from the service, but shall not be paid to those who have left it voluntarily. Employees who have left the service to enter the army or navy shall be entitled to the pro rata increases accruing on their wages up to the time they left.

9. It is agreed that the Canadian Railway War Board and the Central Committee for Canada of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers shall confer promptly upon notice from either party to the other, regarding the incorporation into this agreement of any amendments or interpretations which may be issued by the Director General U.S. Railroad Administration, to his general order 27 and supplement 8 thereof, affecting employees in the maintenance of way department, as a result of the negotiations now in progress, and also with respect to any question which may arise regarding the interpretation of this agreement.

Maintenance of way employees' committees shall confer with their respective railway managements with respect to any increase in rates of pay due for Aug., 1918, under the application of general order 27 of the Director General, U.S. Railroad Administration.

The agreement was signed on behalf of the Canadian Railway War Board by W. D. Robb, Vice President, G.T.R., for the chairman of the Administrative Committee, and by W. M. Neal, General Secretary. On behalf of the Central Committee for Canada United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, it was signed by Wm. Dorey, Chairman, and W. Jewkes, Secretary.

### Quebec and Saguenay Railway Operations, Etc.

By chap. 22, the Dominion Statutes of 1916, the Minister of Railways was authorized to acquire, under the provisions of the statutes of 1915, chap. 16, the Quebec, Montmorency & Charlevoix Ry., from St. Paul St., Quebec, to St. Joachim, 43.2 miles; also the Quebec & Saguenay Ry. and the Lotbiniere & Megantic Ry., at prices to be fixed by the Court of Exchequer, the total outside value being placed at about \$4,000,000, which parliament voted to make the purchase and to complete the lines. Proceedings were taken in the Court of the Exchequer during 1917 to fix the value of the Q. & S. Ry. and the L. & M. Ry. lines, and a report was presented, certain points being reserved in respect of the Q. & S. Ry. Before the Exchequer Court's report was made, parliament, in 1917, voted \$3,667,745, by way of revote, to pay for the three lines authorized to be purchased. The matters reserved by the Court of Exchequer in respect to the Q. & S. Ry. were discussed prior to the last session of parliament, when an act was passed amending the statute of 1916 in several details and authorizing the taking over of the Q. & S. Ry. We are informed that the details of this purchase have not yet been completed.

The Q. & S. Ry. has been opened for traffic from St. Joachim to St. Paul, and a tri-weekly service has been given over it since August. We are advised that the

Q. & S. Ry. passengers are transferred to the Quebec Ry., Light & Power Co.'s line at St. Joachim and are carried from there into Quebec, 25 miles. Freight service is being worked on a joint tariff basis, the Q.R.L. & P. Co. locomotives hauling trains between Quebec and St. Joachim, and the Q. & S. Ry. locomotives hauling the trains between St. Joachim and St. Paul.

The Quebec, Montmorency & Charlevoix Ry. (which is owned by the Q. Ry., L. & P. Co.) and the Lotbiniere & Megantic Ry. are still being operated as independent lines.

### Record Locomotive Construction in the United States.

The United States standard gauge steam locomotive industry, operating under the direction of the War Industries Board, has increased its rate of production approximately 100% in the past three months. In a recent week the output of the three standard gauge companies was 144 locomotives. Since 1910 and up to last August, the highest number ever turned out in a single year was 3,776, which would represent an average weekly output of 72.6 locomotives.

The achievement is particularly noteworthy from the fact that, in bringing about this tremendous jump in production, it has been unnecessary to expend a dollar to increase plant facilities or enlarge the existing works—items of considerable expense in the development of most of the other war industries of the country. Redistribution of orders and concentration by each of the plants on particular types of locomotives has made possible an intensity of effort unprecedented in the industry.

The Pershing locomotive, built on standardized plans designed by the U.S. Military Railways, has not only been made the sole type of steam locomotive in use behind the U.S. lines in France, but, at the instance of the War Industries Board, has been adopted by the British and French Governments as the standard type for their armies on the western front.

Last August the Government, face to face with an immediate and urgent demand for steam locomotives for use in the U.S. and France, was seriously considering the establishment of government plants to meet the emergency. It was proposed that approximately \$25,000,000 should be spent for this purpose. At the suggestion of the War Industries Board the expenditure was held up in favor of the present plan.

Under the arrangement adopted, the construction of all the locomotives of standard gauge for use in France was assigned to the Baldwin Locomotive Works, whereas all orders for the U.S. Railroad Administration were divided between the American Locomotive Co. and the Lima Locomotive Works. These three companies comprise the entire standard gauge steam locomotive industry of the country. By this method of distributing the work, each of the plants has been able to develop extraordinary speed.

Normally the output of the Baldwin works never exceeded 60 locomotives a week. In a recent week it turned out 87 locomotives complete, not to mention 7 gasoline locomotives and 3 electric locomotives, and general repairs on 10 steam locomotives, and the promise is for even better returns. The American Locomotive Works has likewise accomplished ex-

cellent results, for while the number of locomotives is not so great, the tonnage represented in the output is proportionately as large; that is to say, whereas the Pershing locomotive weighs about 83 tons complete, the average weight of the locomotives called for by the U.S. Railroad Administration is approximately 150 tons. Similarly the Lima works have developed to a marked degree in the last three months; and, as in the case of the other two concerns without expansion of plant or plant facilities.

The importance of the results attained in this direction in their relation to the war programme of U.S. generally is indicated by the fact that the U.S. government is spending this year in the construction of these locomotives—both for use in France and on the government-operated roads—approximately \$200,000,000.

### Re-employment of Soldiers and Sailors on U.S. Railways.

The majority of U.S. railways under federal control have already made announcement with respect to the preservation of seniority rights for employees who have entered the service of the army and navy and have indicated that so far as practicable preference in re-employment or reinstatement would be given to soldiers and sailors when mustered out of the service.

1. In order that as nearly as practicable there shall be a uniform treatment of this matter, the following general principles will govern:

(a) In the case of an employee having established seniority rights, so far as practicable, and where the employee is physically qualified, he will be restored to such seniority rights.

(b) In the case of employees who do not have seniority rights under existing practices a consistent effort will be made to provide employment for them when mustered out of military service.

2. Upon railways where the assurances given on this subject have been more specific than the provisions of paragraph 1 hereof, such assurances shall be observed.

St. John's Ambulance Association's Police Shield.—The shield presented by Lord Shaughnessy for first aid competition among police teams of Eastern Canada, was won in the competition for 1918 by the team from the C.P.R. Angus shops, Montreal. The shield was presented to the winning team by Fred Cook, of Ottawa, for the society, Nov. 7, and it will be held by Lord Shaughnessy until another team wins it. The members of the winning team each received a gold pin. The shield was originally presented for competition in 1914, and this is the first occasion on which it has been won by a C.P.R. team.

The Alberta Coal Mines, Limited, has been incorporated under the Alberta Companies Act with authorized capital of \$10,000 and office at Winnipeg, Man., to carry on a general mining business in the province, and in connection therewith to build spur lines and tramways and to connect them with existing railways, and to operate steam or other vessels on any navigable waters of the province. Following are the provisional directors:—B. Humberstone, Clover Bar; H. C. Anderson, Jas. C. Dunn, C. G. Sheldon, and M. Reid, Edmonton, Alta.

# Revised Regulations for Interswitching of Freight Traffic.

The Chief Commissioner, Board of Railway Commissioners, gave the following judgment Oct. 26:—

The board's general order 230 changed the interswitching practice in that it compelled railway companies to give interswitching, instead of merely extending it at certain points as a matter of grace, and also threw open the interswitching service, not only to and from private sidings, but also to team tracks. In thus placing at the convenience and use of competing lines the terminal facilities of the originating carrier, and as a measure of justice to the originating carrier, the order contained the following clause:

"14. Except as hereinafter provided, the tolls herein prescribed shall not apply to deprive the initial carrier of the line haul by a reasonable route of traffic loaded or to be loaded on its railway, including sidings connecting therewith, provided it furnishes at the destination, itself or through its connections or by interswitching, the same delivery and facilities as the competing carrier at no greater charge."

Owing to protests made, the operation of the order has been stayed. The protests that have been made have been from shippers or boards of trade, and have reference entirely to the above paragraph. These protests point out that, as a matter of fact, interswitching in the past has freely been accorded by the railways to private sidings. The protest of the Border Chamber of Commerce of Windsor, Ont., may be quoted as illustrative of the position taken by the eastern shippers who objected to the provision. The protest says, among other things:—

"While our shippers recognize, in general practice, the right of the initial carrier to the line haul on business originating on its line or private sidings therefrom, providing, of course, said carrier can provide the service, still the majority of our members feel that the right to route their traffic should not be taken away from them. While 48 hours time which the board's order provides, in which the initial carrier may place equipment, probably seems reasonable, when you add another 48 hours, or maybe 96 hours, to get equipment switched from another line, same may easily constitute a serious delay. Then again, when you provide by tariff the assurance of the line haul to the initial carrier of all traffic it originates, you take away from that carrier the main incentive for the performance of a service satisfactory to the shipper. We are not aware of any case of a shipper depriving initial carrier of his just proportion of road haul, but feel that the possibility of competition in the routing of traffic should not be interfered with and, therefore, that section 14 of the board's order 230 should be eliminated. We venture the further opinion that the majority of shippers and railways will concur in this request."

The Winnipeg Board of Trade Shippers' Section also protested against the same section, in part as follows:—

"In providing that the railway on which traffic originates is entitled to the line haul, this section believes the board is depriving shippers of a valuable right they have always enjoyed, of routing their cars along the line they desire to use. The enforcement of it will have a radical effect upon the whole service of freight in carlots. It involves the removal of the only competition now remaining to shippers—competition in service. The alternative given to shippers of paying the additional freight to the point of interchange means an additional tax or increase in rates, for which no justification has been advanced."

A similar position has been taken by the Canadian Manufacturers Association. These protests are all made in case of the position of the large shippers, who have private sidings, and therefore of the movement which, in the great majority of cases, has constituted by far the greater percentage of interswitching operations.

On further consideration it would appear fair that the extension of the interswitching practice to team tracks should not be done at any inconvenience or detriment to industries which in the past have had the service. The board's Chief Traf-

fic Officer has had this question, and the interlocking question of free cartage (which has frequently been referred to as an unjust and unfair discrimination, extended in favor of the larger shippers by certain railways), up with the railway companies and some of the larger shippers. The railway companies do not agree unanimously to an amendment of clause 14, the effect of which would be to restore the status of private sidings to their original position. In view of the fact, however, that the compulsory interswitching will enable the companies to use the tracks the one of the other, the larger systems now agree as follows:—

"In view of the services and tolls herein provided for, schedules authorizing any arrangement or device, such as free or assisted cartage, cartage allowance or the like, intended to equalize the facilities of competing carriers at common points, shall be withdrawn and cancelled within three months from the date of issuance of this order. Provided that if a carrier deem itself entitled to such equalization arrangements in a particular case, it may, within six months from the date of issuance of this order, or within six months following the establishment of interchange facilities at any particular point hereafter, apply to the board for relief."

Notwithstanding the position of some of the railway companies, I would give effect to the protests of the Canadian Manufacturers Association, the Winnipeg Board of Trade, and the Border Chamber of Commerce of Windsor, as above set out, and would strike out paragraph 14 of general order 230, substituting the following therefor:—

"Should a team track shipper expressly order his shipment to be interswitched to another carrier, notwithstanding that the initial carrier upon whose team tracks the car has been loaded can furnish at the destination, itself, or through its connections, or by interswitching, the same delivery and facilities as the said other carrier, at no greater charge, the said initial carrier may, in lieu of the toll prescribed in sec. 6, charge and collect its ordinary published rate to the interchange, which rate shall be a lawful additional charge against the shipment. Provided, however, that this alternative shall not be lawful, and sec. 6 shall apply, if within 48 hours after the shipper has requested it, the said initial carrier fails to place a suitable car reasonably convenient for loading."

## General Order 252.

Under the authority conferred upon it by the Railway Act, the board hereby rescinds general order 230, dated May 17, 1918, the effective date of which was postponed from July 1, 1918, to Aug. 1, 1918, by general order 239, dated June 19, 1918; to Oct. 1, 1918, by general order 243, dated July 25, 1918; and to Nov. 1, 1918, by general order 250, dated Sept. 16, 1918, and doth order and declare as follows:—

1. For the interpretation, application, and operation of this order,—

(a) "Interswitching" means the movement of freight in cars between the unloading or loading tracks of one carrier, hereinafter called the "terminal carrier," and the point of interchange with another carrier by whom, singly or jointly with a further carrier, the said traffic has been carried from its point of shipment or is to be carried to its destination, hereinafter called, singly or jointly, the "line carrier," both the terminal carrier and the line carrier which interchanges with the terminal carrier being subject to the jurisdiction of the board; the said movement being performed with or without the aid of an intermediate carrier whether subject or not subject to the jurisdiction of the board, hereinafter called the "intermediary."

(b) The "interchange" means the junction between the terminal carrier and the line carrier, or between the terminal carrier and the intermediary, nearest to the

point of loading or unloading of the car.

2. This order does not apply,—

(a) To tracks used by the terminal carrier for the transfer of freight between cars and its freight warehouse, or for the purpose of transshipment from car to car, nor to tracks otherwise set apart for its own working purposes, except team tracks;

(b) To joint movements which both begin and end in the same terminal or group of terminals or adjoining switching districts;

(c) To cars which, having been once properly interswitched for unloading, are reconsigned for unloading elsewhere within the same terminal or group of terminals.

3. Subject to the provisions of sec. 14, carriers shall at all times, according to their powers, furnish an interswitching service equal to the service accorded their own traffic at all points where interswitching facilities are, or may hereafter be, provided, under the circumstances and at the tolls herein prescribed;

Provided that no terminal carrier or intermediary shall be obliged hereunder to make any movement exceeding the distances herein specified at the tolls herein prescribed, and that the said distances be irrespective of the location of the interchange or of yard limits or boundaries.

4. The toll of an intermediary subject to the jurisdiction of the board shall not exceed, irrespective of weight, \$3 a car for any distance within and including 3 miles, or \$3.50 a car for any distance exceeding three miles to and including 4 miles.

5. If the traffic is loaded or unloaded upon private sidings connecting with the railway of the terminal carrier, or directly from or into an industry, elevator or yard abutting upon its tracks (commonly known as industrial sidings), or in any public stock yard, the toll of the terminal carrier shall not exceed 1c per 100 lb. for the actual weight thereof, subject to the minimum weight of the line carrier's tariff, for any distance within and including 4 miles from the interchange; except that the terminal carrier shall be entitled to a minimum charge of \$3 a carload of traffic included in the 7th, 8th and 10th classes of the Canadian Freight Classification, and \$5 a carload of all other traffic.

6. The toll of the terminal carrier upon all traffic other than that referred to in sec. 5, including traffic to or from team tracks, shall not exceed 2c per 100 lb. for the actual weight thereof, subject to the minimum weight of the line carrier's tariff, for any distance within and including 4 miles from the interchange; except that the terminal carrier shall be entitled to a minimum charge of \$6 a car.

7. Not less than the following proportions of the tolls herein prescribed shall be absorbed in the rate of the line carrier and the remainder shall be an addition thereto:—

(a) One-half of the tolls charged by the terminal carrier under sec. 5 as qualified by sec. 9.

(b) Of the tolls prescribed in sec. 6 one-half of the tolls permitted under sec. 5, as qualified by sec. 9, as if the movement were to or from private sidings.

(c) One-half of the herein prescribed or lower tolls of each intermediary, if any, whether subject or not subject to the jurisdiction of the board.

Provided that the line carrier may, unless its tariff rate is lower, charge and collect \$12 per car for its haul between the interchange and the point of shipment or destination when by reason of such absorption its line charges would otherwise be less than that amount.

8. The appropriate tolls hereinbefore prescribed shall not be exceeded, for the distances herein specified, in each direction for the movement from and the return to the line carrier of so-called off-line transit traffic, and the line carrier shall be subject to the absorption provisions of sec. 7 only when its through rates are the sum of its published rates to and from the stop-over point.

9. If an extra car, commonly known as an idler, is used solely to take care of an overhang of long articles loaded on an open car, it shall be charged by the terminal carrier not more than two-thirds of the herein prescribed appropriate toll for the minimum weight of the line carrier's tariff, except that the terminal carrier shall be entitled to a minimum charge of \$3 a car. If interposed between 2 cars in the same shipment to protect an overhang from each the idler shall be charged for once only.

10. No charge shall be made for the accessory interswitching of the empty car. If the car is loaded in both directions the interswitching toll shall be charged for each movement.

11. Subject to the provisions of sec. 14, nothing herein contained shall prevent the line carrier from absorbing the entire toll or tolls charged for interswitching competitive traffic, provided that the traffic and movements so treated are clearly defined in its tariffs.

12. Traffic to or from the United States shall be subject to the provisions of this order at the point of shipment or destination in Canada.

13. If an exceptional rate is published to apply to or from the tracks of the carrier line only, the ordinary rate which includes the right of interswitching shall be plainly indicated in the same schedule, and the latter rate shall not exceed the former by more than the appropriate toll herein prescribed for the interswitching service.

14. Should a team track shipper expressly order his shipment to be inter-switched to another carrier, notwithstanding that the initial carrier upon whose team tracks the car has been loaded can furnish at the destination thereof, itself or through its connections or by inter-switching, the same delivery and facilities as the said other carrier at no greater charge, the said initial carrier may, in lieu of the toll prescribed in sec. 6, charge and collect its ordinary published rate to the interchange, which rate shall be a lawful additional charge against the shipment;

Provided, however, that this alternative shall not be lawful, and sec. 6 shall apply, if within 48 hours after the shipper has requested it the said initial carrier fails to place a suitable car reasonably convenient for loading.

15. In view of the services and tolls herein provided for, schedules now in effect authorizing any arrangement or device, such as free or assisted cartage, cartage allowance or the like, intended to equalize the facilities of competing carriers at common points, shall be withdrawn and cancelled within three months from the rate of issuance of this order:

Provided that if a carrier deem itself entitled to any such equalization arrangement in a particular case, it may, within 6 months from the date of issuance of

this order, or within 6 months following the establishment of interchange facilities at any particular point hereafter, apply to the board for relief.

16. The schedules to give effect to this order shall be published and filed to come into force on Jan. 1, 1919.

### Canada's Assistance to Great Britain in Transportation Matters.

Appreciation of the assistance rendered to Great Britain by Canada during the difficult period of transportation last winter has been expressed in a letter received by Sir Robert Borden from the Earl of Crawford, who is in charge of the wheat and flour situation for the allies, under the British Food Ministry. The Earl states that the Jacob Stewart, who represented the British Commission, with headquarters at Winnipeg, has explained how difficult the situation would have been without the co-operation of Sir Henry Drayton, the Chief Railway Commissioner, whose assistance surmounted difficulties which threatened to become insurmountable. He states that the Trade and Commerce Department, Canada Food Board and the Railway War Board, to mention only three of many organizations, likewise did much to promote the strength and unity from which Great Britain derived such marked benefits.

### A Western Tribute to M. H. MacLeod.

M. H. MacLeod, who for nearly 20 years has been very closely identified with the Canadian Northern Ry. in Western Canada, will leave this city on Saturday for Toronto, where he will assume his new post as Vice President of this system of railways. Widespread regret is expressed in business and commercial circles that the prevalence of the influenza prevents the tendering to him of a public dinner as an indication of the very high esteem in which he is held.

It was Mr. MacLeod's privilege to be identified with the C.N.R. at the time of its great expansion, in a period when a new empire was created in Western Canada, and his name will therefore be indissolubly connected with the railway. He joined the service as Chief Engineer in 1900, after spending many years with the C.P.R., at a time when the era of rapid development in this country was just beginning and he became the general manager seven years later. During this period he shared the responsibility for all the important construction and development work on the western lines of the system. Eleven years ago Mr. MacLeod was promoted from the position of Chief Engineer of the system to that of General Manager as well, a position which he has filled with distinction and success.

Mr. MacLeod will be affectionately remembered in this city and in the west generally, as an efficient and competent railway official, who always had time to be courteous and kind. The duty which he had to discharge and the task which he had to perform were not exceeded in seriousness by those of any other westerner. The equipment of the railway was never complete, and he was compelled from the beginning to the end to carry on as circumstances might allow. He secured the most cordial co-operation of an efficient staff and exhibited high qualities of judgment and personal industry.

His manner was modest and quiet to a degree, and wherever he went through the west he made friends for the company and alienated none. Among the employees of the company there is probably not one but regrets the departure of the General Manager from this city, and this feeling is shared by thousands of citizens in the four western provinces.

### Steel Rails for Canadian Railways.

In addition to the order given by the Dominion Railways Department to the Dominion Iron & Steel Co., Sydney, N.S., last spring, for 100,000 tons of steel rails for delivery to various Canadian lines, the Department on Nov. 14 gave another order to the Dominion Iron & Steel Co. for 125,000 gross tons, and to the Algoma Steel Corporation, Sault Ste. Marie, Ont., for 75,000 gross tons of 85 lb. section steel rails, for delivery to the various railways. The Algoma Steel Corporation is to commence rolling its order immediately, and the Dominion Iron & Steel Co. will start rolling the new order as soon as the first one has been completed.

We are officially advised that up to Nov. 6, the Dominion Iron & Steel Co., Sydney, N.S., had rolled 97,850 tons of steel rails out of the 100,000 tons first ordered by the Dominion Government, and that 84,140 tons had been shipped to railways as follows:—

	First quality	Second quality
Canadian Copper Co.....	40	.....
Canadian Government Rys....	14,806	938
Canadian Northern Ry.....	18,841	1,136
Canadian Pacific Ry.....	30,282	2,010
Grand Trunk Ry.....	14,455	936
Toronto, Hamilton & Buffalo Ry. ....	663	33
	79,087	5,053

In reference to the no. 2 rails mentioned above, the following provisions in the contract may be mentioned:—"Not over 5% of no. 2 rails may be a part of the tonnage specified in this contract. Rails which by reason of surface or other imperfections are not classed as no. 1 rails will be accepted as no. 2 rails, provided they do not, in the judgment of the inspectors, contain imperfections in such number and of such character as may render them unfit for recognized no. 2 uses. Both ends of all no. 2 rails shall be painted white, except those classed as no. 2, on account of pipe, which shall be painted yellow. The former shall be stamped with 2 prick punch marks, on the ends of head, and also on the web clear of the angle bars. Rails which show pipe at ends shall not be accepted as no. 1 rails, but if they appear perfect when shortened to 27 or 30 ft., they may be accepted as 2 short rails, provided they comply with no. 2 requirements, and such rails shall be painted white at both ends."

It developed during the rolling that there was a greater percentage of no. 2 rails than 5%, due to lack of efficient rail makers, etc., but the railways accepted them.

**Railway Lands Patented.**—Letters patent were issued during October, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry. ....	160.00
Canadian Northern Western Ry. ....	318.55
Edmonton, Dunvegan & British Columbia Ry. ....	56.33
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	321.00
Total .....	855.88

# Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 250, Sept. 16. Postponing to Nov. 1 effective date of general order 250, May 17, to interswitching of freight traffic.

General order 251, Oct. 4.—Amending general order 241, July 26, re reports of accidents by railway companies.

General order 252, Oct. 29.—Providing minimum weight for crushed stone and other building and paving materials, now shown as marked capacity of car but not less than 60,000 lbs.; also that no greater rate shall be charged for such materials than that to which shipper may be restricted by carrier by reason of any track bearing limitations.

General order 254, Oct. 25. Requiring railway companies to supply heaters in all cars furnished for receipt of vegetables in carloads, subject to charges provided for in published tariff; also that heaters supplied by shippers where companies are unable to furnish same, be returned, free of charge, to point of shipment.

27782, Oct. 21.—Extending to Dec. 31 time for completing G.T.R. station at Lydden, Sask., as required in order 27506, July 29.

27783, Oct. 28. Authorizing Canadian Northern Ry. to build highway crossing between Secs. 8 and 17, Tp. 51, Range 11, west 4th meridian, Alta.

27784, Oct. 28. Authorizing C.P.R. to build extension of passing siding over crossing at grade between Railway St. and Maine Central Rd. at mileage 47.38, Cookshire, Que.

27785, Oct. 28.—Authorizing Town of Welland, Ont., to rebuild bridge over Welland River.

27786, Oct. 28.—Authorizing Niagara, St. Catharines & Toronto Ry. to build siding for National Abrasive Co., Niagara Falls, Ont.

27787, Oct. 28.—Authorizing G.T.R. to build spur and extension to siding for Canada Seed Co., Hagersville, Ont.

27788, Oct. 28.—Authorizing Saskatchewan Highways Department to make highway crossing over C.P.R. in n.e. 14 Sec. 12, Tp. 9, Range 17, west 3rd meridian.

27789, Oct. 28.—Relieving C.P.R. from providing further protection at crossing of Valois Ave., Valois Station, Que.

27790, Oct. 29.—Authorizing C.P.R. to build extension to siding across Town Line road between London and Lobo Tps., Ont.

27791, Oct. 31.—Authorizing Canadian Northern Ry. to rebuild bridge over creek on the west leg of Y at Brockville, Ont.

27792, Oct. 28.—Authorizing Niagara, St. Catharines & Toronto Ry. to build bridge for Garden City Paper Co. at Merriton, Ont.

27793, Oct. 30.—Authorizing C.P.R. to build bridge for Western Canada Hardware Co., Lethbridge, Alta.

27794, Oct. 31.—Authorizing C.P.R. to build crossing at grade over road allowance between Sec. 18, Tp. 12, Range 28 and Sec. 13, Tp. 12, Range 29, west principal meridian, at mileage 68 Broadview Subdivision, Sask.

27795 to 27797, Oct. 28.—Approving Bell Telephone Co.'s agreements with Victoria Rural Telephone Co., Algoma District, Ont., Oct. 7; Livingstone Rural Telephone Co., Algoma District, Ont., Oct. 10; and Minto Rural Telephone Co., Wellington County, Ont., Sept. 17.

27798, Oct. 29.—Relieving G.T.R. from providing further protection at crossing near Pickering, Ont.

27799, Oct. 30.—Amending order 27676, Sept. 20, authorizing Canadian Northern Ry. to build spur line for Crescent Collieries at mileage 15.36, Bienfait Subdivision.

27800, 27801. Ordering G.T.R. to maintain day and night watchmen at the crossings of Wentworth St. and Victoria Ave., Hamilton, Ont.

27802, Oct. 30.—Ordering G.T.R. to operate trains between Abbotsford, Que., and the International boundary at speed not exceeding 15 miles an hour and to patrol the track between mileage 1 and 2 with day and night watchmen.

27803, Oct. 2.—Approving bylaw of City of St. Thomas, Ont., prohibiting blowing of steam whistles of locomotives.

27804, Oct. 29.—Authorizing Standard Bank of Canada, Calgary, to pay \$2,000 with accrued interest, to Red Deer Valley Coal Operators' Association deposited under requirements of order 22273, dated July 24, 1914.

27805, Oct. 29.—Extending for 60 days from Nov. 1 time within which C.P.R. shall install electric bell as required by order 27713, Sept. 24.

27806, Oct. 30.—Authorizing Calgary Power Co., Seche, Alta., to make crossing over C.P.R. just east of bridge over Kananaskis River.

27807, Oct. 29.—Recommending to Governor General in council for approval bylaw 20 of Montreal & Southern Counties Ry., adopting as rules and regulations subjects referred to in par. (e) and (f), Sec. 307 of Railway Act.

27808, Oct. 30.—Ordering C.P.R. to pay to Mrs. Fraser, owner of lot immediately west of the Lasing Produce & Storage Co.'s property, Brockville, Ont., \$1,250, as compensation for damages resulting from the construction of the spur there.

27809, Oct. 31.—Ordering Edmonton, Dunvegan & British Columbia Ry. to erect shelter at Dapp, Alta., for accommodation of freight and passengers and to provide for heating and lighting, on arrival and departure of trains.

27810, Oct. 31.—Dismissing application of Village of Rocky Mountain House, Alta., for Order directing C.P.R. to provide stock yard and other accommodation, for freight and suitable accommodation for passengers, and ordering the C.P.R. to build spur at Lochearn, Alta.

27811, Nov. 2.—Rescinding order 27074, Sept. 23, re spur for E. W. Gillett Co., Toronto, subject to condition that construction and operation authorized be without prejudice to existing or future rights of Anthes Foundry Co., or Canada Metal Co.

27812, Oct. 31.—Extending to Dec. 15 time within which building of stock yard at Ardrossan, Alta., on Grand Trunk Pacific Ry., shall be completed.

27813, Oct. 31.—Recommending to Governor General in Council for sanction Algoma Central & Hudson Bay Ry.'s general train and interlocking rules.

27814, Oct. 31.—Authorizing Saskatchewan Government to build highway crossing over Grand Trunk Pacific Branch Lines Co.'s track on surveyed road east and west through Sec. 20, Tp. 40, Range 16, west 3rd meridian.

27815, Nov. 4.—Approving location and detail plans of proposed G.T.R. station at Middlemiss, Ont.

27816, Nov. 2.—Authorizing C.P.R. to build spur for Saskatchewan Co-operative Creameries, Ltd., Saskatoon, Sask.

27817, Nov. 4.—Authorizing Canadian Northern Ry. to extend siding across Ottawa St. at Richmond, Ont.

27818, Nov. 4.—Approving plan and specification of work to be done on Tremblay Creek under C.P.R. and Michigan Central Rd.

27819, Nov. 4.—Authorizing C.P.R. to build extension to Biggar's siding at grade over Bell's Road, near Carona, Que.

27820, Amending order 21815, Nov. 20, 1914, re installation of automatic bell by C.P.R. at crossing of Lavolette Ave., Three Rivers, Que.

27821, Nov. 5.—Ordering G.T.R. to provide a 2 ft. culvert opposite dividing line between Lots 4 and 5, Con. 3, Amabel Tp., Ont.

27822, Nov. 5.—Authorizing G.T.R. to build two spurs for Toronto Harbor Commissioners to Canada Steamship Lines' property.

27823, Nov. 5.—Authorizing Canadian Northern Quebec Ry. to build spur for Jos. Cadieux Co., Laval de Montreal, Que.

27824, Nov. 5.—Approving plans and specifications of work on Charles Butler award drain under Michigan Central Rd., Southwold Tp., Ont.

27825, Nov. 5.—Approving grade revision of London & Port Stanley Ry. between stations 57+00 and 79+00; also alterations in bridge over Thames River, London, Ont., and connection of London & Port Stanley Ry. across Phillip St.

27826, Nov. 5.—Authorizing G.T.R. to connect spurs serving Canadian Chicago Bridge & Iron Co., Bridgeburg, Ont., with Michigan Central Rd. spur.

27827, Nov. 4.—Amending order 27490, July 29, by relieving Toronto, Hamilton & Buffalo Ry. from appointing caretaker to keep station at Mount Pleasant, Ont.

27828, Oct. 29.—Relieving C.P.R. from providing further protection at crossing, near Woodstock, Ont.

27829, Oct. 24.—Approving City of Toronto bylaw 7452, July 26, 1915, respecting blowing steam whistles of locomotives, etc.

27830, Nov. 6.—Suspending, pending hearing, Ottawa Electric Ry. tariff C.R.C. 5, published to become effective Nov. 15.

27831, Nov. 4.—Ordering Canadian Northern Ry. to make highway crossing between Secs. 24 and 25, Tp. 38, Range 5, west 3rd meridian, Sask.

27832, Nov. 5.—Authorizing British Columbia Government to build highway crossing over C.P.R. at Pritchard Station.

27833, Nov. 6.—Authorizing Clarkson, Gordon & Dilworth, chartered accountants, Toronto, to examine books, papers and documents of Canadian and Dominion Express Co.'s for ascertaining tolls and expenditures in connection with their service in Toronto tolls zone.

27834, Nov. 6.—Relieving G.T.R. from providing further protection at second crossing north of Holland Landing station, Ont.

27835, Nov. 5.—Authorizing G.T.R. to take certain lands at Glen Robertson for station building; and to enable it to comply with orders 27176 and 27558, May 2 and Aug. 13, respectively.

27836, Nov. 5.—Approving agreement, Oct. 7, between Bell Telephone Co. and Keppell Rural Telephone Co. in Grey County, Ont.

27837, Nov. 7.—Authorizing Saskatchewan Gov-

ernment to build crossing over south end of C.P.R. station grounds and right of way at Loreburn, Sask.

27838, Nov. 8.—Authorizing G.T.R. to build overhead farm crossing bridge on Lot 19, Con. 11, Bayham Tp., Ont.

27839, Nov. 7.—Extending to Dec. 31, 1919, time within which Canadian Northern Ontario Ry. is required to build branch from its Cartierville yard to Cartierville village.

27840, Nov. 8.—Authorizing C.P.R. to divert road allowance on southern boundary of Sec. 27, Tp. 26, Range 25, west 4th meridian, at Swastika, Alta.

27841, Nov. 7.—Suspending, pending hearing, supplementary tariffs of C.P.R., G.T.R. and Canadian Northern Ry., cancelling commodity rates on ferro-silicon from Welland and Thorold, Ont., and Shawinigan Falls, Que.

27842, 27843, Nov. 7-6.—Authorizing Toronto, Hamilton & Buffalo Ry. to take certain lands for additional tracks at Kinnear yard, Ont.

27844, Nov. 8.—Approving revised grade of Mount Royal Tunnel & Terminal Co. from west portal of tunnel at mileage 3.37 to point just west of Lazard Road crossing at mileage 4.16 from Montreal Terminals.

27845, Nov. 8.—Suspending order 27559, Aug. 14, which apportioned cost of transfer track between Canadian Northern Saskatchewan Ry. and C.P.R., until track has been built and in operation for three months.

27846, Nov. 9.—Authorizing Mount Royal Tunnel & Terminal Co. to cross Jacques Cartier Union Ry. at mileage 5.25 from Montreal Terminals.

27847, Nov. 9.—Dismissing application of Esqueving Branch of United Farmers of Ontario, for order directing G.T.R. to provide shipping facilities for stock at Stewarttown Station, Ont., and ordering G.T.R. to protect all switching operations on sidings by one of the train crew.

27848, Nov. 12.—Ordering Bell Telephone Co. to furnish certain returns as to operating revenue, expenses, maintenance, etc., its capital charges, valuation of lands, plants, etc., in connection with its application for increased tolls.

27849, Nov. 12.—Authorizing C.P.R. to build spur for Canada Metals Co., Outremont, Que.

27850, Nov. 7.—Authorizing G.T.R. to build spur for Consumers Metal Co., Lachine, Que.

27851, Nov. 13.—Extending to Dec. 15 time within which A. B. Pottinger is directed, under order 27627, Aug. 17, to enquire into and report on cost of building of Hastings St. viaduct over Vancouver, Victoria & Eastern Ry. & Navigation Co.'s track.

27852, Nov. 12.—Approving agreement between Bell Telephone Co. and Noisy River Telephone Co., in Simcoe, Dufferin and Grey Counties, Ont.

27853, Nov. 13.—Authorizing C.P.R. to build spur for Bengo-Canadian Pulp & Paper Co. at mileage 1.27, Wayagamack spur, Cap de la Madeleine Parish, Que.

27854, Nov. 13.—Authorizing G.T.R. to build spur across Duberger St., Montreal, for Crane, Ltd.

27855, Nov. 13.—Extending for one year from Nov. 13 time during which Lake Erie & Northern Ry. is authorized to operate over crossing of Toronto, Hamilton & Buffalo Ry.

27856, Oct. 31.—Approving G.T.R. clearances at railway sidings serving Crushed Stone, Ltd., at Kirkfield, Ont.

27857, Nov. 14.—Authorizing Toronto, Hamilton & Buffalo Ry. to cross at grade unopened road allowance between Lots 6 and 7, in Hamilton, Ont.

27858, Nov. 14.—Authorizing Canadian Northern Ry. to build spur for Imperial Oil Ltd., at Youngstown, Alta.

27859, Nov. 14.—Authorizing C.P.R. to build 4 industrial spurs for Leaside Munitions Co., Leaside, Ont.

27860, Nov. 18.—Authorizing C.P.R. to build at Tenth St., Regina Beach, Sask.

27861, Nov. 16.—Suspending, pending hearing, order re Canadian Northern Ry., C.P.R., and G.T.R. tariffs showing proposed increase in local switching charges to become effective Nov. 18.

27862, Nov. 18.—Authorizing Grand Trunk Pacific Saskatchewan Ry. to build interchange track with C.P.R. in Weyburn, Sask.

27863, Nov. 15.—Ordering that in case of mixed carloads consisting of grain or grain products, as defined in special tariffs, and calf meal, from one shipper to one consignee, and shipped from jobbing points whence specific commodity rates have been, or may be, published, 8th class rates shall apply on the calf meal; the aggregate minimum weight of such mixed carloads to be that of the said special tariffs on grain and grain products.

27864, Nov. 19.—Amending order 27741, Oct. 1, re Quebec, Montreal & Southern Ry. train service.

27865, Nov. 16.—Authorizing G.T.R. to build spur for Electric Iron, Ltd., Lakefield, Ont.

27866, Nov. 18.—Authorizing C.P.R. to remove spur on Gowanlock & McEvoy's property in Mc-Irvine Tp., Ont.

27867, Nov. 18.—Approving agreement, Nov. 7, between Bell Telephone Co. and Cambray Telephone Co., Victoria county, Ont.

# Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

**Canadian Pacific Ry.**—Rock ballast is being laid on the Montreal-Toronto line west of Vaudreuil, and it is expected to complete the rock ballasting of the double track this season to mileage 28 on the Winchester sub-division. This will complete this ballasting from Windsor St. Station, Montreal, to near St. Clet, 34 miles. (Nov., pg. 488.)

The Dominion Atlantic Ry. station at Bridgetown, N.S., was burned to the ground Nov. 10.

The Edmonton, Dunvegan & British Columbia Ry.'s general offices in Edmonton, Alta., a 2½ story frame building, valued at \$10,000, were destroyed by fire recently. Temporary offices have been opened. New plans have been announced for rebuilding.

Residents of the Grouard district recently urged upon the Alberta Government the desirability of building a branch of the E.D. & B.C.R. into Grouard, Alta. The Premier promised the deputation that the government will do all that is possible to secure the early building of the branch line, for which the legislature had already provided a guarantee of bonds. Hon. J. L. Cote informed the deputation that he had taken up with the company the bettering of facilities for handling the Grouard district traffic, and had been assured that the necessary steps would be taken to have increased facilities provided at Ewalda, mileage 227.2 from Edmonton Jct., and 237.2 miles from the Grand Trunk Pacific Ry. terminals in Edmonton. Grouard is situated at the western end of Lesser Slave Lake, and is 7 or 8 miles back from the railway. The deputation pointed out that inward local freight for the 12 months Sept. 1, 1917, to Aug. 31, 1918, amounted to 493 tons, while 1,223 tons had been shipped out. (Nov., pg. 488.)

**Grand Trunk Pacific Ry.**—Work is reported to have been started on the enlargement of the company's locomotive house, machine shops and power house, and the laying out of additional yard tracks at the Edmonton, Alta., terminals. Other extensions, it is reported, will be undertaken in the near future. (Nov., pg. 488.)

**Grand Trunk Ry.**—At a meeting of the Ottawa City Council, Nov. 18, the question of G.T.R. crosstown tracks was discussed, and the board of control was asked to take the matter up with the company and with the Dominion Government. The consideration of motions to have bylaws submitted at the municipal elections in Jan., 1919, for raising \$190,000 for a subway under the tracks at Lyon St., and \$200,000 for a viaduct at the crossing on O'Connor St. was postponed. The present suggestion is that the crosstown lines be removed entirely, as suggested by the Federal Town Planning Commission. (Sept., pg. 390.)

**Pacific Great Eastern Ry.**—A press report stated Nov. 13, that track laying had been completed from the former track end near Clinton, to 59-Mile House, 18 miles, and that work has been started laying from 59-Mile House to a point six miles southerly from Horse Lake summit. This will complete the track laying work for the season. The Northern Construction Co., which has the contract, will carry on the deepening of cuts and other similar work on the uncompleted portions of the grade right of way into Prince George, B.C., during the winter. (Nov., pg. 488.)

**Pacific Great Eastern Ry.**—The British Columbia Government owns and operates this railway, one section of which, from North Vancouver to Whytecliffe, 13 miles, is not yet connected up with Squamish, from which point the line runs inland to Clinton, and is under construction thence to Fort George. It has been proposed that the North Vancouver-Whytecliffe section, which runs through a suburban area, should be electrified. The Premier of British Columbia is reported to have said that the government may undertake the work. There is, he added, enough water power at three points along the principal section of the line to operate the whole line to Fort George by electricity when conditions warrant its being done. We have been officially advised that only the future possibilities of electrification have been discussed, and that no active steps are being taken at present.

The deck of the new bridge at Kitsilano, on the West Vancouver-Whytecliffe section of the line, has been completed, and traffic was reported to have been run over the new bridge Nov. 7. (Nov., pg. 488.)

**St. John & Quebec Ry.**—The New Brunswick Government has decided to ask the Dominion Government to take over the St. J. & Q. Ry., which extends from Centreville to Gagetown, N.B., 121 miles, with an extension southerly, nearly completed, from Gagetown to a junction with the C.P.R. near Washfield, 37.8 miles, and a projected extension northerly from Centreville to Andover, N.B., 12 miles, surveys for which have been made. The construction was financed by the New Brunswick Government, which subsequently took over the company's charter, and the completed part of the line is being operated by the Canadian Government Railways on a percentage basis. The matter was expected to be discussed at Ottawa Nov. 19. (Nov., pg. 488.)

**Timiskaming & Northern Ontario Ry.** The Cochrane, Ont., Board of Trade is reported to have asked the Ontario Government to proceed with the extension of the T. & N.O.R. from Cochrane to James Bay, Hudson Bay.

**The Toronto, Hamilton & Buffalo Ry.** has under consideration the making of extensive alterations and additions to its Forest Ave. freight yards at Hamilton, Ont. The extension, it was reported, Oct. 23, is planned to run to a point above Emerald St., and involves the closing of Ghent St. and the removal of the Aged Women's Home on Wellington St. The City Council's special railway committee met Oct. 25, to discuss the matter, notwithstanding the fact that the formal notice of the company's intention had not been received. The committee considered that it was the company's intention to connect up the Forest Ave. delivery and storage yard with the Kinnear sorting yard at Ottawa St. The committee also considered that the building of the Red Hill cut off, as recommended in the Tye-Cauchon report (see Canadian Railway and Marine World, Sept., 1917, pg. 342) would give the company the accommodation desired, while preserving the city's interests. The committee passed the following resolution:—

"That negotiations be entered upon by the city with the railway companies concerned for the purpose of carrying out of the proposals of the Tye-Cauchon report,

and that the Board of Railway Commissioners be petitioned to co-operate with the city and railway companies during the investigations and negotiations. That the city solicitor be instructed to seek legislation empowering the Board of Railway Commissioners in the case of the City of Hamilton to carry out the provisions of the Tye-Cauchon report along the lines of the bill introduced by Senator George Lynch-Staunton on April 19, 1918, and in accordance with the suggestion of Sir James Lougheed on the introduction of the bill. That the Dominion War Board be petitioned as a measure of war relief to order the construction of the Red Hill cut off, provided by the Tye-Cauchon report, and that the City of Toronto and other municipalities affected by condition of freight congestion in the Hamilton and Niagara district be advised of the situation and asked to assist in forwarding and prosecuting this petition."

The city's works committee also gave some consideration to the matter Nov. 6, and authorized the engagement of N. Cauchon and D. Grubb to prepare a plan for carrying certain streets over the railway to give access to the mountain face park.

The Hamilton City Council received, Nov. 13, a copy of a Board of Railway Commissioners judgment, authorizing the company to proceed with its expropriation of certain properties required for the extension of its Kinnear yard at Hamilton. The council's special railway committee is considering the advisability of appealing against the judgment. (Oct., pg. 438.)

## Railway Rolling Stock Orders and Deliveries.

The Greater Winnipeg Water District has sold a 4-wheel switching locomotive to Peter Meagher, Duluth, Minn.

The Canadian Car & Foundry Co. has received an order from the Dominion Government for repairs to the Prime Minister's private car.

The C.P.R. has received 3 express refrigerator cars, 2 baggage and express cars and 1 wooden single track snow plough, from its Angus shops, Montreal.

The G.T.R., between Oct. 15 and Nov. 15, received 7 Mikado locomotives from the Canadian Locomotive Co., which were ordered by the Dominion Railways Department.

It is reported that experiments are being made in the U.S. as to the feasibility of using concrete in the construction of freight cars. It is stated that a gondola car is being built, for a thorough testing, and if satisfactory, cars of other types for freight service will be built.

Canadian Car & Foundry Co. delivered to Canadian Government Railways, recently, 30 Hart-Otis ballast cars, 50 tons capacity, and 376 steel frame box cars, 40 tons capacity. It has also delivered 49 all wood C.G.R. box cars, which have been repaired at the Montreal and Amherst plants.

The U.S. Government is reported to have recalled orders placed for 2,500 locomotives, 61,000 freight cars, and other minor equipment, intended for war service in Europe, since the signing of the armistice. The report also states that British, U.S. and French Governments have decided to pool their surplus rolling

stock in France, and in future to purchase through a common agency.

Canadian Northern Ry. received the following additions to rolling stock, up to Nov. 15:—10 switching locomotives from Canadian Locomotive Co.; 44 consolidation locomotives from Montreal Locomotive Works; 217 coal cars, 50 tons capacity, from Eastern Car Co.; 279 stock cars, 30 tons capacity, and 1,027 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co.

Canadian Government Railways, up to Nov. 15, received the following additions to rolling stock:—10 Pacific locomotives from Montreal Locomotive Works; 13 Mikado locomotives from Canadian Locomotive Co.; 323 coal cars, 50 tons capacity, from Eastern Car Co.; 396 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co., and 2 narrow gauge locomotives from Canadian Locomotive Co., for Prince Edward Island Ry.

### Railway Finance, Meetings, Etc.

**Canadian Pacific Ry.**—A dividend of 2½% on the common stock for the quarter ended Sept. 30, has been declared, payable Dec. 31, to shareholders of record Nov. 30. This dividend is at the rate of 7% a year from revenue, and 3% a year from special income account.

**Central Vermont Ry.**—The directors for the current year are: H. G. Kelley, Chairman; E. C. Smith, President; W. H. Biggarr, Vice President; Frank Scott, Vice President; E. J. Chamberlin, E. A. Chittenden, W. Seward Webb, A. Tuttle, C. F. Smith, S. E. Kilner, H. S. Marston, J. G. Smith, and W. M. Macpherson.

**Grand Trunk Ry.**—Application is being made to the Dominion Parliament for authority to create and issue for the company's general purposes, additional consolidated debenture stock bearing interest at 4%, of an amount the annual interest on which will not exceed £100,000.

**Grand Trunk Ry.**—The G.T.R., which guarantees the Detroit, Grand Haven & Milwaukee Rd. bonds, offered holders of the 6% consolidated mortgage bonds of that company, due Nov. 14 and 15, to extend the time for repayment of the bonds to Nov. 14 and 15, 1920, when repayment will be made at 101% for each bond. Holders who do not accept the extension will be paid off at par.

The Dominion Parliament will be asked next session to authorize the G.T.R. to create and issue additional 4% G.T.R. consolidated debenture stock to an aggregate amount, the annual interest upon which shall not exceed £100,000.

**Guelph Junction Ry.**—The directors on Nov. 22 declared a dividend of 10% on the capital stock, all of which is held by the city of Guelph, Ont. This represents approximately \$17,000, and brings up the total dividends for the year \$57,375, or 33¼% of the city's total investment.

**Kaslo & Slocan Ry.**—After the annual meeting of shareholders, which is called to be held in Montreal, Dec. 27, a special meeting will be held to approve an agreement to lease the line to the C.P.R., and to approve of the issue of bonds for the company's purposes.

**Moncton & Buctouche Ry.**—The special meeting of shareholders called for Oct. 8, and adjourned to Oct. 15, was further adjourned. The meeting was called to consummate the sale of the railway to the Dominion Government, but we are advised it will be some time yet before mat-

ters have been adjusted so that the final transfer can be completed.

**Quebec Southern Ry.**—Quebec South Shore Ry.—The United States Supreme Court refused, Oct. 28, to review the New York Federal Court's decree dismissing a suit brought on behalf of Quebec Southern Ry. stockholders for damages growing out of the consolidation and ultimate financial ruin of that railway and the South Shore Ry. The action was brought by the late Hiram A. Hodge's estate, the amount of damages sought being \$200,000, for alleged breach of contract for the financing and consolidation of the lines.

These two lines were acquired at the judicial sale for the Delaware & Hudson Co., and are now amalgamated and operated under the title of the Quebec, Montreal & Southern Ry.

**Timiskaming & Northern Ontario Railway.**—

	Sept. 1918	Sept. 1917
Passenger receipts . . . . .	\$54,223.19	\$79,065.34
Freight receipts . . . . .	155,866.27	125,695.48
Total receipts . . . . .	\$210,089.46	\$196,760.82

### Freight and Passenger Traffic Notes.

The Kettle Valley Ry. has stopped operating daylight trains 3 and 4, between Penticton and Petaia (Hope), B.C.

The C.P.R., on Nov. 3, withdrew the compartment observation cars from trains 51 and 52 between Winnipeg, Man., and Edmonton, Alta.

The Timiskaming & Northern Ontario Ry.'s eastbound traffic, via Cochrane, Ont., in September, was 928 cars, an increase of 5.4% over August. The westbound traffic was 373 cars, an increase of 7.5% over August.

The Canadian Northern Ry. is reported to have opened a tourist and travel bureau at 605 Hastings St. W., Vancouver, to give information and arrange tours throughout America, Europe and Asia, etc. R. Hay is in charge.

The C.P.R. has substituted dining cars for cafe parlor cars on trains 353, 354 and 356 between Montreal and Quebec. These trains also carry two 22-seat parlor cars, one containing a drawing room, and the other a buffet and observation end.

We are officially advised that the Dominion Atlantic Ry. has been operating a tri-weekly service over its North Mountain branch since Aug. 15. The present timetable has been effective since Sept. 29 and shows a train service on Tuesdays, Thursdays and Saturdays.

The Grand Trunk Pacific Ry. began to run its trains into the C.P.R. passenger station and freight terminals in Saskatoon, Sask., Oct. 24. Prior to that date passengers had to make a three mile auto bus transfer from the G.T.P.R. station into the center of Saskatoon.

The through standard sleeping car between St. Paul, Minn., and Vancouver, B.C., and the tourist sleeper between St. Paul and Edmonton, Alta., have been withdrawn, the cars now only being run between St. Paul and Moose Jaw, Sask., at which point through passengers change to and from C.P.R. main line cars.

Railway traffic, particularly in Saskatchewan and Alberta, was rather badly hit during the influenza epidemic, which has now practically worn itself out. Not only were the number of trains reduced on branch lines throughout the provinces, owing to the illness of railway employees,

but under the regulations put in force by the public health departments of the two provinces, large numbers of places were quarantined, and for some time the railway companies refused to sell tickets to these points.

The Edmonton, Dunvegan & British Columbia Ry., with its associated lines—the Alberta & Great Waterways Ry. and the Central Canada Ry.—put in operation from Nov. 6 to Nov. 15, a special rate for carrying cattle and sheep in carload lots to the Peace River Valley and other points.

The Alberta & Great Waterways Ry. put its winter timetable in operation Nov. 3, between Edmonton and Lac la Biche, Alta. A train leaves the Edmonton station at the corner of 121st St. and 107th Ave., at 8.30 a.m., Mondays and Fridays, arriving at Lac la Biche, at 6.30 p.m., returning therefrom at 6.30 a.m., Tuesdays and Saturdays, and arriving in Edmonton at 4.30 p.m. Between Lac la Biche and the end of track near MacMurray, an occasional train service is provided by the contractors.

The Edmonton, Dunvegan & British Columbia Ry., in conjunction with the Central Canada Ry., put on its winter through service to Spirit River and Peace River, Alta., Nov. 3. A train leaves the Edmonton station at 121st St. and 107th Ave. at 3 p.m., Mondays and Thursdays, and arrives there on the return trip at 9.30 p.m., Wednesdays and Saturdays. McLennan, the junction point with the C.C.R., is reached at 6 a.m.; Spirit River, 12.30 p.m.; Grande Prairie, 5.30 p.m., and Peace River, 12.30 p.m., Tuesdays and Fridays. The return train leaves Grande Prairie 6.30 a.m., Spirit River 11.20 p.m., Peace River 8 p.m., Tuesdays and Fridays, and McLennan, 6.30 a.m., Wednesdays and Saturdays.

### "No Strike" Order Cancelled.

The Dominion order in council prohibiting railway and other lockouts and strikes for the duration of the war was published in full in Canadian Railway and Marine World for November. On Nov. 14, the following statement was issued by the Labor Department:—

"On the recommendation of the Minister of Labor, the government yesterday revoked the 'no-strike' order-in-council, passed on Oct. 11, 1918. The immediate necessity of the original order was caused by a threatened strike, staged for Thanksgiving Day, by some 5,000 labor men. The order was not regarded by the Government as placing any disability upon the great majority of labor organizations who had accepted the government's war labor policy, as announced by order in council in July last, and were submitting all their grievances to the tribunals designated which were being operated with perfect success. The 'no-strike' order was issued only for the purpose of maintaining industrial peace during the continuance of the war, and is cancelled because it has served its purpose and is no longer necessary."

**Maritime Coal & Ry. Co.**—The Nova Scotia Government, on Nov. 6, approved, after amendment, the M.C. & R. Co.'s bylaw providing for increased freight rates, such rates to become effective on the same date as the company puts into effect the McAdoo scale of wages, and makes it applicable to all the employees, the new tariff to remain in force for the duration of the war and until further ordered.

## Canadian Transportation Men, Engineers, Etc. in the War.

**Demobilization of Railway Troops.**—The first step in regard to demobilization and the placing of soldiers back in civilian employment is reported to have been taken by the Militia Department. An order has been sent to every military district requesting the authorities to furnish information at once as to the number of men now attached to railway battalions

high tribute to the railway workers at the front. He said that if ever heroes deserved to be sung of it was the railway men. The latter were equal in heroism to any other body who served in the war. They built their lines right up to the front. They disdained danger. The engineers did things in the way of construction, which for speed and daring had

acceptance of hardship—all this was very fine, indeed.

**The Timiskaming & Northern Ontario Railwaymen's Patriotic Association**, to July 31, had contributed \$92,749.41 to the Red Cross Society and the Canadian Patriotic Association.

### PERSONAL NOTES.

**Sergt. L. Creighton**, reported admitted to the General Hospital, Boulogne, France, Oct. 12, with gunshot wound in the knee, and **K. Creighton**, reported wounded, Oct. 10, are sons of **H. C. Creighton**, Superintendent, Canadian Express Co., St. John, N.B.

**Lieut. J. S. Flanagan**, recently reported killed in action in France, entered C.P.R. service in the Passenger Department, London, Eng., in 1912. He enlisted in Dec., 1914, and was given a commission in the 3rd County of London Regiment, Nov., 1915.

**Private R. C. Morland**, King's Liverpool Regiment, recently killed in action at Hendecourt, France, was 26 years old. He entered C.P.R. service in Liverpool, Eng., Apr. 15, 1907, and enlisted Feb. 8, 1916. He was mentioned in dispatches three times, and awarded the Military Medal.

**Brigadier-General J. W. Stewart**, D.S.O., formerly of Foley Bros., Welch & Stewart, railway contractors, Vancouver, B.C., who, it was announced recently, had been appointed to control the railway operations in France, has an appreciative friend in **A. B. Cook**, who has also been associated with railway building in Canada and elsewhere. While not accurate in all detail, the following statement indicates the manner of the man, whose work has received considerable praise from the authorities:—"Let me tell you of the case of **Jack Stewart of Canada**. He came out from the old country 30 years ago and worked for \$1 a day driving a team on a Canadian railroad. He got on in the world and in time amassed a fortune. The war broke out and Stewart enlisted as a private. He got to France and when he saw the engineers of the French and British armies at work, it gave him the itch. There was too much red tape. It took a month to have a thing started let alone completed. To build a little bridge a bunch of European engineers would take weeks. Stewart asked leave to take a hand in some of the transport work. In time he gained this privilege and when a bit of a bridge was to be built, three weeks was the time given some British engineers. 'I'll do it in two days with 1,000 Canadians,' volunteered Stewart. They gave him his way and he built the bridge in a day and a half. He built the systems of light railways up to the front line. Before he went in, the Englishmen hauled wagons and guns by hand or by horses in the way their fathers did it. Stewart networked the front lines with light railways. He went to the hills of Canada and gathered together 5,000 rough-neck railway men, bridgemen, axemen and mule skinnners, and they gave him full charge of the building of railways for all the allied armies. The allied lines never went ahead a hundred yards without being followed by a band of steel over which Stewart made it possible to keep the front line supplied constantly with men, guns and food. This was what baffled the Germans more than anything else. They couldn't understand it and never will understand it. The people of

who have actual railway experience. The military authorities understand this order to mean that the railway troops will be demobilized first. The method adopted to reduce the strength of units locally will be to board all men and discharge those in the lower categories. In discharging the men of low categories, preference will be shown towards the married men and the older men.

**The Railway Troops Service.**—Rev. Dr. Beatty, of the Canadian chaplain service, preaching in Montreal recently, paid a

never been equalled. In many cases, the engineers in charge undertook, at the request of the fighting command, duties which it could not be supposed would ever be carried out—that is, the laying down of strategic railways on the instant, as it were. There would be a sudden need for this railway; and the engineers would do the impossible, and finish the job on time. The network of railways, right up to the lines, was something wonderful, and the endurance, the cheerfulness of the men, their initiative, their

America can thank God that before the United States went in Jack Stewart of Canada got his way at the front. He was the connecting link in bringing to bear on offensive and defensive works of warfare the system of doing things originated in the western states and in western Canada. There is nothing that a railway construction man will not tackle and there is little in the building line that he cannot do. And the best part of the story is that you never hear about Stewart in the papers. He is never decorated or knighted or any of the rest of it. He is a brigadier general in the Canadian army. But he is a silent worker."

Lieut. W. A. Stewart, who has been awarded the Military Cross recently, is son of W. A. Stewart, formerly Superintendent, Ontario-St. Lawrence canals. He enlisted with the 59th Battalion, Kingston, Ont., and was wounded in August.

Lieut. John Hatherly Way, eldest son

Lieutenant J. H. Way.

of Capt. J. B. Way, of Sault Ste. Marie, Ont., who was killed in action, east of Arras, France, Aug. 27, was born in the Nipissing District, Apr. 17, 1889, educated in the public schools and collegiate institute at Sault Ste. Marie, Ont., entered the service of the Imperial Bank, and was located at Rosthern, Sask., on the outbreak of war. He attended the School of Infantry at Toronto, holding a commission in the 51st Regiment, Sault Ste. Marie Rifles, and was appointed one of the officers of the 119th Battalion at its formation, taking an active part in the recruiting of that unit in the Algoma District. He proceeded to Camp Niagara in May, 1916, and overseas in July, 1916. On the break up of the unit in England he was posted to the 58th Battalion in France and was engaged with that unit during the heavy operations before Amiens, and east of Arras, where he was killed by machine gun fire, deeply regretted by his brother officers and the men of his unit, by whom he was highly esteemed. His father, Capt. J. B. Way, Freight and Passenger Agent, C.P.R., Sault Ste. Marie, went on duty with the Sault Ste. Marie Canal Military Guard

shortly after war broke out, and on Mar. 15, 1915, obtained leave of absence from the C.P.R. for military service, proceeding to Camp Niagara, Ont., as Paymaster of the Machine Gun Corps, remaining there until November, 1918, when he accompanied the corps to Exhibition Camp, Toronto.

### Valuation of Materials, Etc., for Dominion Taxation Purposes.

R. W. Breadner, Commissioner of Taxation, Finance Department, Ottawa, in a paper read before the Dominion Association of Chartered Accountants recently, said:—"Another question of vital importance to those engaged in business at present is that of inventories. Owing to the very high prices now prevailing, and the practical certainty of a drop when normal conditions return, the department has ruled that inventories of merchandise shall be taken at cost, or at market values if less than cost. It is no business of the department if a company sets aside a reserve against the contingency of a

### Flagging Protection on Double Tracks.

The Board of Railway Commissioners passed general order 255, Nov. 20, as follows:—Re the question of more adequate flagging protection on double tracks and the proposed amendment to rule D35 of General Train and Interlocking Rules, as outlined in circular 163, Apr. 9, 1918, and submitted for consideration to the railway companies. Upon reading the replies filed by and on behalf of the railway companies, and the written submissions and representations made to the board on behalf of the Brotherhood of Locomotive Engineers; and upon the report and recommendation of the board's Chief Operating Officer, it is ordered that General Train and Interlocking Rules, approved by order 7563, July 12, 1909, be amended by striking out the first paragraph of double track rule 35 and substituting therefor the following:—

"D35. A yellow flag or yellow light placed beside the track on the same side as the engineer of an approaching train,

Rapid Railway Construction on British Western Front in France. British official photograph. Crown copyright reserved. Photograph loaned by C.P.R.

future fall in prices, but whether any part or the whole of that reserve will be allowed as an expense can only be determined after scrutiny of the returns for assessment purposes, and consideration of the conditions that have arisen after the setting aside of that reserve. The department cannot settle that question in advance."

The Canadian Northern Ry. and the Grand Trunk Pacific Ry.—Recent press reports in the western provinces stated that the management of these two lines had arranged a close co-operation throughout the west, whereby each will use those parts of the other's tracks and terminals where such use can be more economically made in giving public service than in using its own facilities. We were officially advised Nov. 13, that the only arrangement of the kind the C.N.R. has in contemplation is running rights over the G.T.P.R. from Regina to Moose Jaw, Sask., the G.T.P.R. to use the C.N.R. terminals in Moose Jaw. Reference to this matter will be found under Canadian Northern Ry. Construction on another page. No other arrangements, we are advised, have been made; in fact, the Moose Jaw agreement will not be signed until some minor differences between the companies are adjusted.

or, where the practice is for trains to run to the left, a yellow flag or yellow light placed on the left side of the track, as well as on the same side (between tracks) as the engineer of an approaching train, so that the engineer of the approaching train shall have a clear view of said signal for a distance of at least 1,200 ft.—indicates that the track 3,000 ft. distant is in condition for a speed of but 6 miles an hour, unless otherwise instructed, and the speed of the train will be controlled accordingly. A green flag or a green light placed beside the track on the same side as the engineer of an approaching train, or on the left side of the track, if so operated, at a point beyond the slow track, indicates that full speed may be resumed."

Railway Lands Patented.—Letters patent were issued during October, respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry. ....	160.00
Canadian Northern Western Ry. ....	318.55
Edmonton, Dunvegan & British Columbia Ry. ....	56.33
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. ....	321.00
Total .....	855.88

## Mainly About Railway People Throughout Canada.

**G. M. Hickey**, station master, C.P.R. station, Calgary, Alta., died there, Nov. 1, aged 25.

**W. R. Flynn**, of the special service department, Canadian Northern Ry., died at Port Arthur, Ont., Nov. 7, aged 29, from influenza.

**John Maughan**, who died at Toronto, Nov. 28, was father of W. Maughan, Assistant General Passenger Agent, Eastern Lines, C.P.R., Montreal.

**Sir George Bury**, who retired recently from the Vice Presidency of the C.P.R., was born Mar. 6, 1866, and not in 1886, as stated in our last issue.

**Charles A. Lutz** has been appointed Treasurer, United States Railroad Administration, vice L. G. Scott, Comptroller, Wabash Ry., acting Treasurer, resigned.

**L. C. Clarke**, engineer and contractor, North Bay, Ont., who died recently, aged 38, was for some time engaged on contract work on the C.P.R. Lake Superior Division.

**Frederick Hamilton Baker**, only surviving son of W. R. Baker, C.V.O., ex Secretary, Canadian Pacific Ry., Montreal, died at Edmonton, Alta., Nov. 2, aged 28.

**James Barbour**, Claims and Right of Way Agent, Canadian Northern Ry., Toronto, who died there, Oct. 17, left an estate of \$32,725, his widow being sole beneficiary and executor.

**D. C. Coleman**, Vice President, Western Lines, C.P.R., made his first trip of inspection since his recent appointment, from Winnipeg to Victoria, B.C., during the latter part of October and early part of November.

**Grant Hall**, Vice President, C.P.R., was entertained to luncheon, Nov. 16, by the company's Winnipeg staff, on finally leaving there for Montreal after several years residence, latterly as Vice President and General Manager, Western Lines, C.P.R.

**O. H. Kerr**, Travelling Auditor, C.P.R., who died at Revelstoke, B.C., Nov. 5, aged 30, entered C.P.R. service in Aug., 1902, as office boy, and was promoted to clerk in Sept., 1903, and to Assistant Travelling Auditor, Dec. 1, 1912. He was appointed Travelling Auditor July 1, 1913.

**W. A. Mather**, General Superintendent, Saskatchewan District, C.P.R., Moose Jaw, of whom some biographical data were given in our last issue, was incorrectly referred to as General Superintendent, Manitoba District, C.P.R., Winnipeg. His correct title was given in the list of transportation appointments in the same issue.

**C. A. Hayes**, General Manager, Eastern Lines, Canadian Government Railways, was presented with a chest of silver by the staff at Moncton, N.B., Nov. 20, on leaving there for a western trip, prior to taking up his appointment as Vice President in charge of traffic, Canadian Northern Ry. System and Canadian Government Rys., Toronto.

**Capt. P. W. Freeman**, reported wounded in the leg near the knee recently, is son of P. A. Freeman, Chief Engineer, Nova Scotia Tramways Co., Halifax, N.S. This was his third time wounded, and in addition he was gassed once. His brother, Lieut. H. G. Freeman, returned to Nova Scotia recently and was discharged owing to influenza. On his recovery he applied

to be sent overseas again, but peace has supervened.

**James Powell**, chief draftsman, Motive Power Department, G.T.R., Montreal, has

**A. E. Warren**,  
General Manager, Western Lines, Canadian Northern Ry. System—Canadian Government Railways.

**Geo. Hodge**,  
Assistant to Vice President, Eastern Lines, C.P.R.

retired, and has been appointed instructor in mechanical drawing, for the re-education of returned soldiers, at the Montreal Technical School, under Canadian Government (Civil Service) Hospital Commission. He had been in G.T.R. service for

36 years, and since 1899, as chief draftsman of the Motive Power Department. He has also been Secretary of the Canadian Railway Club for about 12 years.

**A. P. Barnhill**, K.C., who has been appointed a director of the Canadian Northern Ry. Co., was born at St. John, N.B., May 27, 1863, and was admitted as a barrister in 1889, and a K.C. in 1905. He practises in St. John, and was President, St. John Barristers Society in 1908-09. He is associated with several industrial and financial undertakings, and was a member of the International Commission created in 1908, to consider treaty rights and the joint use of the St. John River.

**Thomas Cantley**, who has been appointed a director of the Canadian Northern Ry. Co., was born at New Glasgow, N.S., in 1854, and commenced his business life as a telegraph operator. He entered business on his own account as T. Cantley & Co., in 1878, and entered Nova Scotia Steel & Coal Co.'s service in 1885, and was appointed Assistant Manager in 1889; General Manager, 1901, and was subsequently also Vice President, and President of the company, and latterly, Chairman of the board of directors.

**Patrick M. Cotter**, Freight and Passenger Agent, Quebec Central Ry., Quebec, Que., died there Nov. 26, aged 65. He was born at Quebec, Que., and at 15 years old entered transportation service in the North Shore Ry. office, and was later transferred to Ottawa, the company having been absorbed into the C.P.R. He subsequently returned to Quebec and entered Quebec & Lake St. John Ry. service, eventually becoming station agent, and in 1903 transferred to Quebec Central Ry. service. He was a director of the Magdalen River Ry. Co.

**William J. Rohider**, whose appointment as General Master Car Builder, C.P.R., Montreal, was announced in our last issue, was born at Savannah, Ga., Feb. 15, 1869, and entered railway service in Oct., 1884, since when he has been, to Oct., 1905, apprentice, assistant foreman, Car Department, and foreman, Passenger Car Department, Central of Georgia Ry., Savannah, Ga.; Oct., 1905, to Oct. 15, 1918, Master Car Builder, same road, and since the operation of U.S. railways by the U.S. Railroad Administration, alternative member of the Committee on Standards and Inspection.

**Robert Phipps Ormsby**, who has been appointed Secretary, Canadian Northern Ry. Co., Toronto, was born at Arklow, Ireland, June 26, 1869, and was educated at Reading and Ipswich Grammar Schools, and Cambridge University, England. He was for a short time in C.P.R. service at Vancouver, B.C., and later with the Great Northern Ry. at St. Paul, Minn. He entered Canadian Northern Ry. service in 1902, as secretary to the Chief Solicitor, and in 1910 was appointed Assistant Secretary of the company, which position he held until his recent appointment as Secretary.

**Emery C. P. Cushing**, who has been appointed Assistant Purchasing Agent, C.P.R., Winnipeg, was born at Ottawa, Ont., Nov. 13, 1886, and entered C.P.R. service Dec. 1, 1902, since when he has been, to Mar. 15, 1907, clerk and stenographer, Passenger Department, Ottawa; Mar. 15, 1907, to Aug. 1, 1908, clerk and stenographer, General Passenger Department, Montreal; Aug. 1, 1908, to Aug. 1, 1912, clerk and stenographer, President's office, Montreal; Aug. 1, 1912, to May 1, 1918,

chief clerk and secretary to the President (Lord Shaughnessy), Montreal; May 1 to Sept. 30, Assistant to General Purchasing Agent, Montreal.

**J. D. McDonald**, who has been appointed Assistant General Passenger Agent, Eastern Regional District, U.S. Railroad Administration, Chicago, Ill., was born at Toronto, Aug. 27, 1855, and entered Grand Trunk Ry. service in 1868, since when he has been, to 1870, messenger, Toronto; 1870 to 1875, assistant ticket agent, Toronto; 1875 to 1896, ticket agent, Buffalo, N.Y.; 1896 to May, 1902, City Passenger and Ticket Agent, Buffalo, N.Y.; May, 1902, to Mar. 1, 1911, District Passenger Agent, Toronto; Mar. 1, 1911, to Oct., 1918, Assistant General Passenger Agent, Chicago, Ill.

**Sir Hormisdas Laporte**, who has been appointed a director of the Canadian Northern Ry. Co., was born at Lachine, Que., Nov. 7, 1850, and was educated at Sault au Recollet, and McGill University. He entered business life in the retail grocery trade and passed to the wholesale trade in 1881. He was one of the founders of the Montreal Chamber of Commerce, and was a president of that body. He is President of the Saguenay Electric Co., was at one time one of the harbor commissioners for Montreal, and was Mayor of the city 1904 to 1906, and is associated with several industrial and charitable organizations.

**Hon. Gideon D. Robertson**, who was appointed Minister of Labor in the Dominion Government, Nov. 7, was born at Welland, Ont., Aug. 26, 1874. He was, from June, 1892, to Aug., 1896, telegraph operator, G.T.R., London Division; Aug., 1896, to Sept., 1901, telegraph operator, C.P.R., Eastern Division; Sept., 1901, to Apr., 1908, agent and yardmaster, C.P.R., Atlantic Division; Apr., 1908, to Feb. 1914, General Chairman, Order of Railroad Telegraphers on the C.P.R., and Feb., 1914, to Jan. 1, 1918, Canadian Vice President, Order of Railroad Telegraphers. He was appointed a senator, Jan. 31, 1917, and a government minister without portfolio, Oct. 23, 1917.

**Charles Percy**, who died at Westmount, Quebec, Nov. 30, aged 74, was formerly Treasurer, G.T.R., and retired from active service in 1900. He commenced his railway service in the railway clearing house in London, Eng., and was subsequently secretary of an association regulating the railway traffic between England and Scotland. In 1875 he was selected as Treasurer for the Great Western Ry. of Canada, and afterwards became associated with the Midland Ry., both of which are now parts of the G.T.R. system. He was later, Secretary-Treasurer, Chicago & Grand Trunk Ry. Co., and was appointed Assistant to the General Manager, G.T.R., at Montreal, in 1886, and Treasurer of the company in 1894.

**T. A. Wilson**, whose appointment as Superintendent, Smiths Falls Division, Quebec District, Smiths Falls, Ont., was announced in our last issue, entered railway service in Jan., 1885, since when he has been, to July, 1892, successively, call boy, Stratford, Ont.; operator and brakeman, G.T.R.; July, 1892, to Oct., 1900, agent and operator at various points. Lake Superior Division, C.P.R.; Oct., 1900, to Oct., 1912, General Yardmaster, C.P.R., Ottawa, Ont.; Oct., 1912, to June, 1916, Assistant Superintendent, District 3, Lake Superior Division, C.P.R., Schreiber, Ont.; June, 1916, to Oct. 16, 1918, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont.

**A. E. Warren**, who has been appointed General Manager, Western Lines, Canadian Northern Railway System, Canadian Government Railways, Winnipeg, was born at Taunton, Eng., June 9, 1874, entered railway service in 1889, and served

**G. L. Courtney**,  
General Manager, Pacific & Great Eastern Ry.

**C. E. Stockdill**,  
Assistant to Vice President, Western Lines, C.P.R.

in various capacities in Car Service Department, Superintendent's, General Superintendent's and Manager's offices, and station and yard service, C.P.R., until July, 1901, when he resigned to enter mercantile business. He entered Canadian Northern Ry. service in Aug., 1902, and has served as station agent, chief

clerk to General Manager, Superintendent, General Superintendent and Assistant to General Manager, Western Lines. From Jan. 1 to Aug. 1, 1918, he was loaned to the Dominion Government and acted as Chief Operating Officer, Department of Railways and Canals, Ottawa.

**Lord Shaughnessy**, Chairman, C.P.R. Co., left Montreal, Nov. 23, for a trip to England. While there he will meet his son, Capt. W. J. Shaughnessy, who has spent considerable time in France, and may possibly visit France, where his other son, Capt. A. T. Shaughnessy, who was killed in the earlier stages of the war, is buried. A Montreal daily paper states that when Lord Shaughnessy is in London, he will "take his seat for the first time in the House of Lords." Our contemporary is a little behind the times, as Lord Shaughnessy took his seat in the House of Lords, Nov. 23, 1916.

**George L. Courtney**, whose appointment as General Manager, Pacific Great Eastern Ry., Vancouver, B.C., was announced in a recent issue, was born at Chatham, Ont., Oct. 7, 1868, and entered transportation service in 1884, since when he has been, to 1886, clerk, G.T.R., Chatham, Ont.; 1887 to 1889, clerk, G.T.R., Hamilton, Ont.; 1889 to 1890, clerk, C.P.R., Vancouver, B.C.; 1890 to 1895, Traffic and Passenger Agent and Contracting Freight Agent, C.P.R., Victoria, B.C.; 1896 to 1900, Agent, C.P.R., Victoria, B.C.; 1900 to 1906, Traffic Manager, Esquimalt & Nanaimo Ry., Victoria, B.C.; 1906 to 1908, District Freight and Passenger Agent, C.P.R., and Esquimalt & Nanaimo Ry., Victoria, B.C.; 1908 to 1915, in private business; 1916 to June, 1918, Agent, Canadian Pacific Ocean Services, Ltd., Hong Kong, China.

**George Hodge**, whose appointment as Assistant to Vice President, Eastern Lines, C.P.R., Montreal, was announced in our last issue, was born there, Oct. 2, 1874, and entered C.P.R. service Mar. 24, 1890, since when he has been, to Aug., 1890, junior clerk, Passenger Department; Aug., 1890, to Apr., 1892, clerk, Vice President's office; Apr., 1892, to June, 1896, secretary to Vice President; June, 1896, to Jan., 1907, chief clerk to Vice President; Jan., 1907, to July, 1908, Superintendent, Montreal Terminals; July, 1908, to Feb., 1911, Superintendent, District 3, Eastern Division, all at Montreal; Feb., 1911, to Mar., 1912, Superintendent, District 2, Ontario Division, London, Ont.; Mar., 1912, to May, 1915, General Superintendent, Eastern Division, Montreal; May, 1915, to Oct., 1918, Assistant to General Manager, Eastern Lines, Montreal.

**B. J. Farr**, whose appointment as Superintendent of Motive Power and Car Department, Grand Trunk Western Lines Rd., Detroit, Mich., was announced in our last issue, was born at Elenburg, N.Y., Sept. 8, 1876, and entered railway service in 1893, since when he has been, to 1898, machinist apprentice, Central Vermont Ry., St. Albans, Vt.; 1898 to 1900, Erecting Shop Foreman, same road, St. Albans, Vt.; 1900 to 1905, General Foreman, same road, St. Albans, Vt.; 1905 to 1906, General Foreman, Motive Power and Car Department, Delaware & Hudson Co., Schenectady, N.Y.; 1906 to 1908, Master Mechanic, Motive Power and Car Department, United Fruit Co., Port Limon, Costa Rica; 1908 to 1914, Engineering Department, Panama Canal, Gatun and Cristobel, Panama; 1914 to 1916, General Foreman, G.T.R., Battle Creek, Mich.; 1916 to Oct., 1918, Master Mechanic, G.T.R., Battle Creek, Mich.

**Charles Chardon Labrie**, whose appointment as Purchasing Agent, Canadian Northern Ry., Vancouver, B.C., was announced in our last issue, was born at Quebec, Que., Sept. 8, 1882, and entered transportation service, May 7, 1905, since when he has been, to June, 1906, material agent, James Bay Ry., Mackenzie, Mann & Co., Ltd., Toronto; June, 1906, to July, 1907, clerk, Chief Engineer's office, same company, Toronto; July, 1907, to Sept., 1909, assistant construction accountant, same company, Toronto; Sept., 1909, to July, 1910, construction accountant, same company, Toronto; July, 1910, to Dec., 1912, construction accountant, Canadian Northern Eastern Ry., Stewart, B.C.; Dec., 1912, to Mar., 1918, Managing Accountant and Purchasing Agent, Mount Royal Tunnel & Terminal Co., Mackenzie, Mann & Co., Montreal; Mar. to Oct. 31, 1918, Auditor, Canadian Northern Pacific Ry., Vancouver, B.C.

**James Joseph Walker**, formerly Mechanical Accountant, Intercolonial and Prince Edward Island Rys., who died Oct. 28, was born at Halifax, N.S., Mar. 6, 1854. He entered Government railways services Sept. 3, 1869, since when he was, to Nov. 1, 1869, station master, Bedford, N.S.; Nov. 1, 1869, to Nov. 1, 1871, operator, Halifax, N.S.; Nov. 1, 1871, to Dec. 1, 1872, clerk, Halifax, N.S.; Dec. 1, 1872, to Nov. 1, 1873, operator and baggage master, St. John, N.B.; Nov. 1 to Dec. 1, 1873, brakeman, Halifax, N.S.; Dec. 1, 1873, to July 1, 1874, clerk, Moncton, N.B.; July 1, 1874, to Feb. 1, 1875, operator and baggage master, Halifax, N.S.; Feb. 1, 1875, to Aug. 1, 1898, clerk, Moncton, N.B.; Aug. 1, 1898, to Jan. 1, 1904, chief clerk, Moncton, N.B.; Jan. 1, 1904, to Sept. 1, 1916, when he was granted a pension by the Intercolonial and Prince Edward Island Railways Employees' Provident Fund.

**P. Carleton Perry**, whose appointment as Assistant Resident Engineer, Grand Trunk Pacific Ry., Regina, Sask., was announced in our last issue, was born at Fort William, Ont., July 27, 1889, and entered railway service, May 6, 1906, since when he has been, to Nov., 1909, axeman, chainman, rodman and inspector, G.T.P.R., Fort William, Ont.; Dec., 1909, to Mar., 1910, rodman, Northern Pyrites Co., Superior Jct., Ont.; Apr. to Nov., 1910, inspector, G.T.P.R., Fort William, Ont.; Dec., 1910, to Nov., 1911, level man and topographer, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.; Jan. to Mar., 1912, draftsman, G.T.P.R., Fort William, Ont.; Apr. to Aug., 1912, instrument man, G.T.P.R., Fort William, Ont.; Aug., 1912, to Sept., 1914, draftsman G.T.P.R., Fort William, Ont.; Apr. to June, 1915, rodman, G.T.P.R., Fort William, Ont.; June, 1915, to July, 1916, rodman, G.T.P.R., Edmonton, Alta.; July, 1916, to Sept., 1918, instrument man, G.T.P.R., Edmonton, Alta.

**Robert Arnott Sewell**, whose appointment as Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, was announced in our last issue, was born at Brampton, Ont., Sept. 2, 1880. He entered transportation service with the Canadian Express Co., as clerk at Brampton, Ont., in Jan., 1895, and remained in that service until May, 1898, when he entered C.P.R. service, since when he has been, to Dec., 1898, assistant agent, Cheltenham, Ont.; Dec., 1898, to Apr., 1899, operator at various points on the Eastern Division; Apr., 1899, to Aug., 1903, operator, relieving agent and dispatcher at various points on the Ontario Division; Aug., 1903, to Jan.,

1912, agent and dispatcher at various points on the Western Lines; July, 1914, to Dec., 1916, agent, Oshawa, Ont.; Dec., 1916, to Nov., 1917, Chief Dispatcher, Toronto; Nov., 1917, to Oct., 1918, Inspector of Transportation, Eastern Lines, and for a short time, acting Superintendent, Trenton Division, Ontario District.

**William C. Paul**, who has been appointed Trainmaster, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., was born at Coldstream, Ont., Dec. 22, 1889, and entered railway service Feb. 1, 1907, since when he has been, to Sept., 1908, car checker, Algoma Central & Hudson Bay Ry., Tagona, Ont.; Sept., 1908, to May, 1910, clerk, General Superintendent's office, same road, Sault Ste. Marie, Ont.; May, 1910, to Feb., 1911, accountant, same road, Sault Ste. Marie; Feb., 1911, to Oct., 1914, chief clerk, Superintendent's office, same road, Sault Ste. Marie; Oct., 1914, to May, 1916, chief clerk, General Superintendent's office, same road, and Algoma Eastern Ry., Sault Ste. Marie; May to Dec., 1916, chief clerk, General

**W. J. Robider.**  
General Master Car Builder, Canadian Pacific Ry.

Manager's office, A.C. & H.B.R., Sault Ste. Marie; Dec., 1916, to Jan. 15, 1917, chief clerk, Chief Engineer and General Superintendent's office, same road, Sault Ste. Marie; Jan. 15, 1917, to Nov. 18, 1918, Assistant Trainmaster, same road, Steelton, Ont.

**Chester P. Siems**, head of the Siems-Carey Railway & Canal Co., died at his home in New York, N.Y., Oct. 23, aged 33. He was born at St. Paul, Minn., and graduated from Yale in 1907, after which he entered the engineering department of the Spokane, Portland & Seattle Ry. In 1908 he joined his father in forming the firm of Siems & Co., for carrying out large construction programmes for the Great Northern and the Northern Pacific Ry. In 1911 the firm was converted into the Siems-Carey Co., and Mr. Siems was elected president. In Feb., 1912, the Marsh-Siems-Carey-Smith Co. and the Siems-Carey, Ltd., both construction companies, were launched, and carried out contracts for the Chicago,

Milwaukee & St. Paul, Grand Trunk, and the Canadian Pacific Rys. Mr. Siems in 1916 established the Siems-Carey Railway & Canal Co. It had a contract for 2,000 miles of railway construction in China, against which protest was made by the Japanese Government and it was postponed.

**Robert Walton**, appointed recently Division Master Mechanic, Farnham Division, Quebec District, C.P.R., Farnham, Que., was born at Peterborough, Ont., Oct. 16, 1880, and entered C.P.R. service, Nov. 9, 1895, since when he has been, to Mar. 10, 1896, lighting switch lamps, Havelock, Ont.; Mar. 10, 1896, to Sept. 13, 1897, clerk and checker, Havelock, Ont.; Sept. 13, 1897, to Sept. 17, 1898, wiper, Havelock, Ont.; Sept. 17, 1898, to Aug. 11, 1899, fireman, Havelock Ont.; Aug. 11, 1899, to Sept. 2, 1900, fireman, Toronto; Sept. 2 to Nov. 2, 1900, fireman, Havelock, Ont.; Nov. 2, 1900, to Feb. 21, 1905, fireman and night foreman, Havelock, Ont.; Feb. 21, 1905, to Oct. 2, 1907, locomotive man, Havelock, Ont.; Oct. 2, 1907, to Mar. 21, 1908, locomotive man, Toronto; Mar. 21, 1908, to May 16, 1912, locomotive man, Havelock, Ont.; May 16, 1912, to June 3, 1916, locomotive man, Toronto; June 3, 1916, to July 1, 1918, Road Foreman of Locomotives, Toronto; July 1 to Sept. 18, 1918, relieving Division Master Mechanic, Ontario District, Toronto.

**R. Armstrong**, who has been appointed Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, Man., was born at Kingston, Ont., Jan. 27, 1865, and entered railway service July 4, 1886, since when he has been, to June 1, 1894, consecutively, operator and agent at Calabogie, Ont.; agent at Lavant, Ont.; ticket and billing clerk at Kingston, Ont., and agent at Renfrew, Ont., for Kingston & Pembroke Ry. After two years in private business, he was from June 9 to 30, 1896, operator on the C.P.R. at Weyburn, Sask.; for four years, operator and agent, Mountain Section, Pacific Division, C.P.R.; two years relieving agent and dispatcher, Kootenay Section; four years yard agent, Vancouver; one year agent, Vancouver wharf; and to June 1, 1908, agent, same road, Vancouver; June 1, 1908, to Dec. 31, 1909, General Agent, same road, Fort William, Ont.; Dec. 31, 1909, to July, 1912, Superintendent, Superintendent of Terminals, same road, Fort William, Ont.; July, 1912, to May, 1913, Superintendent, District 3, Saskatchewan Division, same road, Saskatoon, Sask.; May, 1913, to Oct. 14, 1918, Superintendent, Souris Division, Manitoba District, Souris, Man.

**William A. Cowan**, General Superintendent, Transcontinental Division, Canadian Government Railways, Cochrane, Ont., died there, Nov. 17, from influenza. He was born at Galt, Ont., Jan. 22, 1877, and entered railway service July 23, 1899, as bridge carpenter, C.P.R., London, Ont., where he remained until Sept. 25, 1901. He graduated from the School of Practical Science, Toronto, Apr. 30, 1904, and from May 1, 1904, to Feb. 1, 1905, was transit man, C.P.R., London and Toronto; Feb. 1 to Oct. 15, 1905, Assistant Engineer of Terminals, C.P.R., Toronto; Apr. 15, 1905, to Feb. 14, 1908, Resident Engineer, District 3, Ontario Division, C.P.R., Toronto; Feb. 19, 1908, to Nov. 1, 1909, Resident Engineer, District 2, Ontario Division, C.P.R., London, Ont.; Nov. 1, 1909, to Oct. 1, 1911, Resident Engineer, District 1, Eastern Division, C.P.R., Farnham, Que.; Oct. 1, 1911, to Nov. 1, 1912, Assistant Engineer, C.P.R., Montreal; Nov. 1, 1912, to Jan. 9, 1914, Superintendent

ent. District 1, Atlantic Division, C.P.R., Brownville Jct., Me.; Jan. 10 to Mar. 15, 1914, Engineer of Construction, Halifax Ocean Terminals, Intercolonial Ry., Halifax, N.S.; Mar. 15, 1914, to May 1, 1915, Resident Engineer, District 2, Intercolonial Ry., Truro, N.S.; May 1, 1915, to June, 1917, Division Engineer, Transcontinental Division, Canadian Government Railways, Cochrane, Ont.; Feb. 1 to Apr. 1, acting Assistant General Superintendent of that division, and from June, 1917, to the time of his death, General Superintendent. The funeral took place at Quebec, Que.

**William J. Pickrell**, whose appointment as Master Mechanic, New Brunswick District, C.P.R., St. John, N.B., was announced in a recent issue, was born at London, Ont., Sept. 15, 1880, and entered C.P.R. service Jan. 3, 1900, since when he has been, to July 30, 1901, wiper, Toronto; July, 1901, to Oct. 31, 1904, fireman, Toronto; Nov. 1, 1904, to Aug. 3, 1906, travelling fireman, Toronto; Aug. 4, 1906, to Aug. 14, 1908, Assistant Road Foreman of Locomotives, Toronto; Apr. 15, 1908, to May 9, 1910, locomotive man, Toronto; May 10 to June 30, 1910, rule examiner, Toronto; July 1 to Oct. 14, 1910, locomotive man, Toronto; Apr. 9 to May 16, 1912, acting District Master Mechanic, District 3, Ontario Division, Toronto; May 17 to Oct. 31, 1912, acting District Master Mechanic, District 1, Ontario Division, Toronto; Nov. 1 to Dec. 1, 1912, District Master Mechanic, District 3, Ontario Division, Toronto; Dec. 2 to Dec. 8, 1912, locomotive man, Toronto; Dec. 9, 1912, to July 23, 1913, District Master Mechanic, District 3, Ontario Division, Toronto; July 29 to Aug. 17, 1913, Assistant Superintendent, District 3, Ontario Division, Toronto; Aug. 18 to Oct. 31, 1913, District Master Mechanic, District 3, Ontario Division, Toronto; Nov. 1, 1913, to Apr. 23, 1915, Assistant Superintendent, District 2, Atlantic Division, Woodstock, N.B.; Apr. 24, 1915, to Sept. 18, 1916, Master Mechanic, Ontario District, Toronto; Sept. 19, 1916, to Sept. 19, 1918, Assistant Superintendent, Farnham Division, Quebec District, Farnham, Que.

**Samuel J. Hungerford**, who has been appointed Assistant Vice President, Canadian Northern Ry. System, Canadian Government Railways, Toronto, was born near Bedford, Que., July 16, 1872, and entered railway service in May, 1886, since when he has been, to Feb., 1891, machinist apprentice, South Eastern Ry., and C.P.R., Farnham, Que.; May, 1891, to Aug., 1894, machinist, at various points in Quebec, Ontario and Vermont; Sept., 1894, to Aug., 1897, charge man, C.P.R., Windsor St., Montreal; Aug., 1897, to Apr., 1900, Assistant Foreman, C.P.R., Farnham, Que.; Apr., 1900, to Feb., 1901, Locomotive Foreman, C.P.R., Megantic, Que.; Feb. to Sept., 1901, General Foreman, C.P.R.; Feb., 1903, Locomotive Foreman, C.P.R., Cranbrook, B.C.; Feb., 1903, to Jan., 1904, Master Mechanic, C.P.R., Western Division, C.P.R., Calgary, Alta.; Jan., 1904, to Dec., 1907, Superintendent, Locomotive Shops, C.P.R., Winnipeg; Jan. 1908, to Feb., 1910, Superintendent of Shops, C.P.R., Winnipeg; Mar., 1910, to Apr., 1915, Superintendent of Rolling Stock, Canadian Northern Ry., Winnipeg; May, 1915, to Nov. 1, 1917, Superintendent of Rolling Stock, C.N.R., Toronto; Nov. 1, 1917, to Dec. 1, 1918, General Manager, Eastern Lines, C.N.R., Toronto.

**F. P. Brady**, who has been appointed General Manager, Eastern Lines, Canadian Northern Ry. System, Canadian Gov-

ernment Railways, Montreal, was born at Haverhill, N.H., June 22, 1853, and entered railway service 1869 as station baggagemaster Passumpsic Ry., since when he has been consecutively: 1873 to 1880, train dispatcher Northern Rd., at Concord, N.H.; 1880 to 1888, Chief Train Dispatcher Southeastern Ry., at Richford, Vt.; 1888 to 1889, Trainmaster C.P.R.; 1889 to 1898, Assistant Superintendent same road; 1898 to May, 1901, Superintendent same road at Smiths Falls, Ont.; May, 1901, to Sept., 1902, Superintendent districts 10 and 11, same road, at Toronto; Sept., 1902, to May, 1903, Superintendent district 19 same road at Fort William, Ont.; June 1, 1903, to Feb., 1904, Assistant General Superintendent Central Division, Winnipeg, Man.; Feb., 1904, to Sept. 16, 1908, General Superintendent Lake Superior Division, C.P.R., North Bay, Ont.; May 1, 1908, to June, 1909, Member of the Canadian Government Railways Board of Management; June, 1909, to June, 1913, also General Superintendent, Canadian Government Railways, Moncton, N.B.; June, 1913, on the abolition of the Canadian Government Railways Managing Board, to May, 1915, General Superintendent, Canadian Government Railways, Moncton, N.B.; May, 1915, to June 1, 1917, General Superintendent, Canadian Government Railways, Cochrane, Ont.; June 1, 1917, to Dec. 1, 1918, General Manager, Western Lines, Canadian Government Railways, Winnipeg, Man.

**Charles A. Hayes**, who has been appointed Vice President, Traffic, Canadian Northern Ry. System, Canadian Government Railways, Toronto, was born at West Springfield, Mass., Mar. 10, 1865, and entered railway service in 1882, since when he has been, to 1884, clerk, Freight Auditor's office, Connecticut River Rd., now Boston & Maine Rd.; 1884 to Oct., 1887, similar position, Boston & Lowell Ry., Boston, Mass.; Oct., 1887, to Nov., 1890, clerk, General Freight Agent's office, Boston & Lowell Ry., and its successor, Boston & Maine Rd.; Nov., 1890, to June, 1892, General Freight and Passenger Agent, Central New England & Western Ry., Poughkeepsie, N.Y.; June to Oct., 1892, Division Freight Agent, Philadelphia & Reading Rd., while it had control of the C.N.E. & W.R., Hartford, Conn.; Oct., 1892, to June, 1896, New England Agent, National Despatch Line, Boston, Mass.; June, 1896, to July, 1899, New England Agent and acting General Manager, National Despatch Line, Boston, Mass.; July, 1899, to May, 1903, Manager, National Despatch-Great Eastern Line, Buffalo, N.Y.; May, 1903, to Apr., 1908, Assistant General Freight Agent, G.T.R., Chicago, Ill.; Apr., 1908, to Oct. 16, 1911, General Freight Agent, G.T.R., Montreal; Oct. 16, 1911, to June, 1913, Freight Traffic Manager, G.T.R., Montreal; June, 1913, to June 1, 1917, Freight Traffic Manager, Canadian Government Railways, Moncton, N.B.; June 1, 1917, to Dec. 1, 1918, General Manager, Eastern Lines, Canadian Government Railways, Moncton, N.B.

**Timiskaming & Northern Ontario Ry. Wages.**—The Minister of Labor has appointed a board of conciliation and investigation to deal with the claims of the T. & N.O.R. clerks, station baggage men and freight handlers. R. H. Parmenter of Toronto represents the railway, J. G. O'Donoghue, Toronto, represents the men and Judge Denton, of Toronto, is Chairman.

## Canadian Northern Railway Construction, Betterments, Etc.

**Eastern Lines.**—Reports are current that extensive betterments are to be carried out on the company's eastern lines, and particularly on the line from Toronto via Parry Sound to the junction with the transcontinental line near Sudbury.

**Ottawa-Toronto Line.**—We are officially advised that a contract has been let to W. Leacey, Brockville, Ont., for the construction of 2 concrete abutments to replace wooden cribs under I beam span, under Y track at Brockville.

We are officially advised that a contract has been let to the Dominion Construction Co., Toronto, for putting in concrete abutments for a deck plate girder span over a creek and the C.P.R. spur to ballast pit, at mileage 12.9, on the Trenton subdivision near Malvern, Ont. The bridge is at present carried on pile foundations.

**Leaside Terminals.**—It is reported that the terminal yards and buildings at Leaside, Toronto, have been so far completed that it is expected to begin occupying them within a few weeks. Everything, however, is said to depend upon the arrival of rails for laying the tracks.

**Western Branch Line Betterments.**—A press report states that during the construction season, now practically closed, considerable betterment work has been done on many of the western branch lines. The policy of removing wooden bridges has been continued, and on the main line a number of old bridges have been taken out and replaced by permanent steel structures on concrete abutments.

**Moose Jaw, Union Station.**—Grading was started Oct. 25 for the tracks to the new union station at the Crescent, Moose Jaw, Sask. The new station will be jointly used by the C.N.R. and the Grand Trunk Pacific Ry. Representatives of the company, interviewing the city council Nov. 4 on some matters connected with the work, are reported to have stated that it was hoped to have the rails laid by the end of the year, or early in Jan., 1919. A temporary station will be provided and trains will be run into it as soon as track-laying is finished.

**Extension into Kamloops.**—We are officially advised that it is expected to complete, in the near future, a piece of line from 300 ft. from a junction with the line on the north bank of the South Thompson River into the town of Kamloops, B.C., where a station will be built. The bridge across the river has already been built. This piece of line will form part of the projected branch line to Vernon, etc.

**False Creek Terminals.**—At the request of D. B. Hanna, President, the City Engineer of Vancouver has forwarded to Toronto a complete set of his plans for the development of the False Creek terminal sites and a copy of his report on harbor development. The plans show the proposed disposal of a 21 acre area of the reclaimed False Creek, through which it is proposed to have a 50 ft. channel. Provision is being made for interswitching tracks with all the railways entering the city. (Nov., pg 485.)

**The Canadian Council of Agriculture**, at a meeting at Winnipeg recently, passed a resolution favoring, among other things, public ownership and control of railway, water and aerial transportation; telephone, telegraph and express systems, all projects in the development of natural power and of the coal mining industry.

# The Consolidation of the Canadian Northern and the Canadian Government Railways' Management.

Sir Robert Borden, in speaking at the Toronto Exhibition directors' luncheon on Sept. 9, as reported in Canadian Railway and Marine World for October, said, among other things: "The total railway mileage owned by Canada is very large, comprising nearly 14,000 miles, and reaching from the Atlantic to the Pacific. All the lines included in this mileage should be operated as one system, and under one management. This system should not be administered by a department of the government, but it should be connected as soon as practicable with steamship lines on both the Atlantic and the Pacific, and last, but not least, its operation should be kept absolutely free from party political interference. For these reasons, and for this purpose, the Canadian Northern Ry. System's board will be reconstituted in the immediate future." To carry out the policy indicated by the Prime Minister, an order in council was passed Nov. 20, transferring the operation and management of the Canadian Government lines, including the Intercolonial Ry. and its recently acquired branch lines, the Prince Edward Island Ry., and the National Transcontinental Ry. to the Canadian Northern Ry. directors. The order is as follows:—

"Whereas the Minister of Railways and Canals represents that under the provisions of the Department of Railways and Canals Act, Revised Statutes of Canada, chap. 35, the management, charge and direction of all government railways is vested in the minister, and by the Government Railways Act, chap. 36, Revised Statutes of Canada, sec. 49, the Governor in Council is authorized to make such regulations as he deems necessary for, inter alia, the management of all or any of the government railways: and whereas the minister further represents that, with a view to attaining a maximum of economy and efficiency in the operation of the Canadian Government Railways and of the Canadian Northern Ry. System, it is desirable that there should be a board of management of the Canadian Government Railways, consisting of the persons who comprise the board of directors of the Canadian Northern Ry. Co.

"Therefore, the Governor General, by and with the advice and consent of the King's Privy Council for Canada, is pleased to order that the order in council of June 5, 1917, P.C. 1529, whereby C. A. Hayes was appointed General Manager of Eastern Lines, and F. P. Brady was appointed General Manager of Western Lines, Canadian Government Railways, shall be, and the same is, hereby rescinded; and the Governor General in council is further pleased to order and declare that the persons from time to time comprising the board of directors of the Canadian Northern Ry. Co., shall be, and they are hereby appointed, a board of management of the Canadian Government Railways, and are hereby given the powers vested in the General Manager under the general regulations of the Canadian Government Railways, adopted by order in council of Jan. 22, 1914, P.C. 184."

The mileage of the co-ordinated lines as at June 30, 1917, was as follows:

Canadian Government Railways.	Miles.
Intercolonial .....	1,510.40
Elgin & Havelock .....	27.00
International of N.B. ....	111.30
Moncton & Buctouche .....	34.00
New Brunswick & P.E.I. ....	36.05
St. John & Quebec .....	119.87

St. Martins .....	30.00
Salisbury & Albert .....	45.00
York & Carleton .....	10.50

Prince Edward Island .....	1,924.12
National Transcontinental .....	277.78
	2,003.03

	4,204.93
--	----------

Canadian Northern System .....	9,405.44
	13,610.37

**Additional Directors.**—In view of the extensive mileage in the Maritime Provinces and Quebec of the lines which have been consolidated, the government has recognized the importance of giving those provinces substantial representation on the directorate, and for this purpose the Canadian Northern Ry. directors have elected the following additional directors, viz.: Thos. Cantley, New Glasgow, N.S.; A. P. Barnhill, K.C., St. John, N.B.; and Sir Hornisdas Laporte, Montreal.

**Officials, appointments, jurisdiction, etc.**—As a result of the co-ordination of the various lines and for the purpose of effectually consolidating the management, the jurisdictions of the principal C.N.R. officials have been extended over the C.G.R. also, viz.: D. B. Hanna, President; A. J. Mitchell, Vice President, Finance and Accounts; R. C. Vaughan, Assistant to President; Z. A. Lash, Senior Counsel; Gerard Ruel, Counsel. M. H. MacLeod, Vice President, Operation, Maintenance and Construction; S. J. Hungerford, Assistant Vice President; E. Langham, General Purchasing Agent, and J. P. Driscoll, General Superintendent Car Service.

C. A. Hayes, heretofore General Manager, Eastern Lines, C.G.R., Moncton, N.B., has been appointed Vice President in charge of traffic, C.N.R. and C.G.R., at Toronto.

For operating purposes the C.N.R. and C.G.R. lines have been merged and divided into Eastern Lines and Western Lines, respectively; the Eastern Lines comprising all C.N.R. lines east of Port Arthur, Ont., and all C.G.R. lines east of O'Brien, Que.; the Western Lines comprising all C.N.R. lines, Port Arthur and west thereof, and C.G.R. lines west of O'Brien, Que. F. P. Brady, heretofore General Manager, Western Lines, C.G.R., Winnipeg, has been appointed General Manager, Eastern Lines, C.N.R. and C.G.R., at Montreal; and W. A. Kingsland, formerly General Superintendent, Quebec Lines, C.N.R., has been appointed Assistant General Manager, Eastern Lines, C.N.R. and C.G.R., at Montreal. A. E. Warren, General Manager, Western Lines, C.N.R., Winnipeg, has had his jurisdiction extended to include C.G.R. lines west of O'Brien, Que. Louis Lavoie, heretofore Purchasing Agent, Canadian Government Rys., Railways and Canals Department, Ottawa, has been transferred to Toronto as Assistant General Purchasing Agent, C.N.R. and C.G.R.

The accounting and auditing departments for Eastern and Western Lines, C.N.R., located heretofore at Toronto and Winnipeg respectively, are being consolidated in Toronto. C. E. Friend, heretofore General Auditor, C.N.R., Winnipeg, has been transferred to Toronto as Comptroller, C.N.R.; and J. D. Morton, heretofore Assistant Comptroller, C.N.R., Toronto, has been appointed General Auditor, C.N.R., there. Several other officials and their staffs will be transferred from Winnipeg to Toronto on Jan. 1, particulars of which and other appointments are

given in "Transportation Appointments Throughout Canada" on another page of this issue.

The C.N.R. management has secured the old Imperial Hotel property on Adelaide St. East, Toronto, for traffic department and divisional operating offices.

The circulars announcing appointments of officials having jurisdiction over both the C.N.R. and C.G.R. are headed "Canadian Northern Railway—Canadian Government Railways," and the general officers' letter headings, etc., are printed in the same way. It is said that it is the government's intention to name the whole co-ordinated system Canadian National Railways, and that the necessary legislation will be introduced at the Dominion Parliament's next session.

**Inspection of Canadian Government Rys.**—D. B. Hanna, President, left Toronto, Nov. 26, for a trip over the C.G.R. in Quebec, the Maritime Provinces and Eastern Ontario, accompanied by most of the other directors, viz.: A. J. Mitchell, Vice President; Major Graham A. Bell, C.M.G., acting Deputy Minister of Railways and Canals; Robt. Hobson, Hamilton, Ont., and R. T. Riley, Winnipeg. Other directors joined them en route, viz.: A. P. Barnhill, K.C., of St. John, N.B., at Ottawa; Sir Hornisdas Laporte, at Montreal, and Thos. Cantley, of New Glasgow, N.S., further down the line. The party also comprised M. H. MacLeod, Vice President, Operation, Maintenance and Construction; and R. P. Ormsby, Secretary, C.N.R. S. J. Hungerford, Assistant Vice President, accompanied the party to Quebec, and F. P. Brady, General Manager, Eastern Lines, joined them at Montreal. Division and other local officials joined the party en route travelling through their respective jurisdictions.

From Toronto they went to Ottawa by C.N.R., thence to Montreal by C.G.R., and from there over the I.R.C., the Quebec Bridge and the N.T.R. to Quebec. The further itinerary planned included, from Levis via I.R.C. to Moncton, N.B., where two days would be spent, and then on to Sydney, Prince Edward Island, Halifax and St. John, returning via Quebec and over the National Transcontinental, to Cochrane, Ont., and from there to Toronto the intention being to reach Toronto early in the second week of December.

The principal objects of the directors' trip are to consider the question of betterments, new construction, additional rolling stock, etc., as well as a possible reorganization of the C.G.R. staff. It is probable that after Mr. Hanna's return to Toronto a number of changes in the C.G. R. staff at Moncton, etc., will be announced.

**St. Malo Shops, Que.**—The Mayor of Quebec, on Nov. 13, telegraphed the Minister of Railways, asking that the National Transcontinental Ry. shops at St. Malo, Que., be put into operation at once, in accordance with the agreement with the city, in order to provide against unemployment caused by the closing of munition plants. The Minister of Railways replied, stating that the operation of the Canadian Government Railways had been placed under the Canadian Northern Ry. directors, and advised the mayor to communicate with the President, D. B. Hanna. This is a good beginning, and it is to be hoped that a similar policy will be adhered to.

# Suspension of Car Demurrage Rules on Account of Influenza Epidemic.

The Chief Railway Commissioner, Sir Henry Drayton, gave the following judgment Oct. 25:—A letter has been received by the board from the James Shearer Co., Montreal, as follows: "At our yards in Montreal we are practically tied up on account of the epidemic of Spanish influenza, and we find that the Eagle Lumber Co. at St. Jerome, to which we are shipping material to be dressed for us, is in the same predicament and in all probability cars will be under demurrage before we can even start to unload them. As this is a matter entirely beyond our control, we would ask if it is not possible to make special arrangements to have the demurrage charges withheld until the epidemic subsides. We trust you will be able to do something to relieve us, otherwise we shall be heavily penalized by the railways, due to the unavoidable illness of our employees."

The car demurrage rules do not cover a case of this character. While the rules arrived at were largely the result of negotiation and agreement between shippers and companies, a condition such as the present was never contemplated. There is no doubt as to the effect of the present epidemic. The railways themselves are unable to handle freight concurrently. A large number of cars set out for movement cannot be moved, simply because so many of the railway men are suffering from influenza that it is impossible for the railways to move them. This fact is well known and has been recognized by the shipping public.

Precisely the same conditions apply to the employees of industrial and other plants. As I see it, it would be absolutely unfair and improper to penalize shippers who cannot accept cars owing to the ravages worked by the epidemic on their employees. The matter is one absolutely beyond their control. Demurrage ought not to be charged under such conditions; and in my opinion the railways ought to be advised that demurrage ought not to be charged, and that if necessary the appropriate amending order will be made as of this date.

On Nov. 25, the Chief Commissioner gave the following judgment:—On Oct. 25 a judgment was issued providing that demurrage should not be charged where shippers were unable to accept cars owing to the ravages worked by the epidemic among their employees. This judgment was followed up by a memorandum dated Nov. 14, which was communicated to the different parties in interest by a letter from the board's Secretary, as follows: "I am directed by the board to write that

considerable misapprehension appears to exist as to the meaning of the direction given by the board on Oct. 25 last dealing with charges for demurrage during the influenza epidemic. The effect of the board's memorandum is not to abolish car demurrage tolls during the period of the epidemic. Relief, however, is extended to such consignees and consignors who were unable to load or unload cars concurrently owing to the illness of their employees. The general duty to unload promptly, where such unloading can be accomplished, still remains, but during the prevalence of the epidemic the railway companies may and must, where demurrage otherwise would be charged, relieve firms of demurrage payments to the extent that such firms have been unable to make prompt loading or unloading as a result of influenza among their employees. As a result it is the duty of the companies to consider each case on its merits, and apply the appropriate relief. As a further result, all railway companies which excuse the payment of demurrage on the grounds of influenza existing among the employees of consignees or consignors are justified in such action, having regard to all the prohibitions of discrimination."

The Car Service Bureau and those applying for relief under the judgment of Oct. 25 do not seem as yet to have arrived at any proper procedure in carrying out the board's directions, as a number of specific complaints have been received. There ought to be no difficulty in giving effect to the board's directions. The situation is perfectly plain. In the first instance, consignors and consignees who make delay either in loading or unloading cars, are subject to the penalties provided under the existing rules; but consignors and consignees who have been unable to load or unload as the result of the influenza among their employees are to be excused from the operation of the rules. Prima facie, a defaulting consignee or consignor is liable, and the onus of proof is on any consignee or consignor to show such a state of affairs existing as the result of the epidemic, and under which, with due diligence, it was impossible for the delay to have been prevented.

Applicants for relief under the board's order, so that the question can properly be disposed of not only as between the railways and the merchants, but as between merchants themselves, and so that all may be treated on a like basis and without discrimination, should file with the Car Service Bureau, or with the immediate railway company interested, evidence in writing, either by affidavit or

declaration, giving the following particulars: The number of men employed immediately previous to the epidemic. The number of men employed during the continuance of the epidemic and at the time the default in question took place. Any special or auxiliary efforts made to release the cars during such period, such as taking men when possible from other branches of the firm's activities, or securing them from outside sources, such as the services of outside carters when available, or showing that no men were available in other branches of the applicant's business. What action, if any, was taken to stop further shipments to the plant until the epidemic had ceased. If no action was so taken to show whether, in the course of trade, and having regard to the dates of shipments, any such action was possible.

Some of the complaints that have been received show that at least in part the applications are based upon the so called bunching of cars. The rules already provide for this, and apart from any specific direction, merchants are entitled to relief when cars are bunched, or in other words, when cars are being forwarded at the one time in greater numbers than as ordered and unloading facilities permit.

On the receipt of this material the matter ought to be promptly dealt with by the Car Service Bureau, or by the railway company interested, as the case may be, and under the circumstances the preliminary payment of the demurrage claim ought not to be insisted upon. It is, of course, open to the bureau or to the railway company interested to challenge the statements made and to ask in doubtful cases for further proof; but I confidently expect that the bureau and the railways will adjust, without the necessity of any board hearings, the great majority of cases which will arise.

The Car Service Bureau submits that when it is found that delays are in fact chargeable to the inability of employees of consignors or consignees owing to influenza, to load or unload, the higher tariff now in force ought to be reduced to the lower tariff of \$1 a day. There is no room for the distinction that the Car Service Bureau desires to make. When delays are unavoidable, owing to the ravages of the epidemic, it is not a question of the scale of charges; it is a question as to whether or not demurrage should or should not be charged, and the board has ruled that it ought not to be charged. No charge, therefore, of any character is to be made for unavoidable defaults attributable to the foregoing reasons.

## Traffic Orders by Board of Railway Commissioners.

### Interswitching of Freight Traffic.

General order 252. See page 538 of this issue, "Revised regulations for interswitching, etc., of freight traffic."

### Minimum Weight for Crushed Stone.

General order 253. Oct. 29. Re complaint of Canadian Manufacturers' Association against increased carload minimum weight for crushed stone published by Grand Trunk, Canadian Pacific, and Canadian Northern Railways, effective October 1, 1918. Upon hearing the complaint at Toronto, Oct. 17, and its appearing that certain carriers have published and filed schedules increasing certain car-

load minimum weights to conform to Canadian Railway War Board's circular 75, dated Aug. 5, it is ordered that the said schedules be amended as follows, viz.: To provide that the minimum weight for crushed stone and other building and paving materials, now shown as the marked capacity of the car, but not less than 60,000 lb., be the marked capacity of the car, but not exceeding the actual weight when cars are fully loaded, subject to the said minimum of 60,000 lb. To provide that no greater weight shall be charged for the said materials than that to which the shipper may be restricted by the carrier by reason of any track

bearing limitations. That the amendments to give effect to this order come into force not later than Nov. 18, 1918.

### Stoves for Fruit Shipments.

General order 254. Oct. 25. Re complaints of Dominion Brokers, Ltd., Calgary, Alta.; Plunkett & Savage, Calgary; Armstrong Growers' Association, Armstrong, B.C., and the Okanagan United Growers, Ltd., Vernon, B.C., against requirement of Canadian Pacific Ry. that, owing to the shortage of refrigerator cars and heaters, shippers of vegetables in British Columbia furnish stoves or other method of heating lined box cars, equipped with floor racks, in substitution

# Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,  
Marine, Express, and Telegraph, also Railway and  
Canal Contractors' Interests.

Official Organ of various Canadian Transportation  
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,  
70 Bond Street, Toronto, Canada.

ACTON BURROWS,  
Managing Director and Editor-in-Chief.  
AUBREY ACTON BURROWS - Secretary and  
Business Manager.

Associate Editors  
JOHN KEIR and DONALD F. KEIR

United States Business Representative,  
A. FENTON WALKER, 143 Liberty St., New York

Member of  
Canadian Press Association,  
Associated Business Papers,  
Audit Bureau of Circulation.

Authorized by the Postmaster General for Canada,  
for transmission as second class matter.

SUBSCRIPTION PRICE, including postage any-  
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.  
The best and safest way to remit is by express money  
order. Where one cannot be obtained, a post office  
money order, or bank draft, payable at par in Toronto,  
may be sent. Cheques or drafts not payable at par in  
Toronto cannot be accepted. Remittances should be  
made payable to Canadian Railway and Marine World.

for heated refrigerator cars. Upon hear-  
ing the matter at Vancouver, June 6; Cal-  
gary, Alta., June 10, and Edmonton, Alta.,  
June 11, 1918, and upon reading the fur-  
ther submissions filed, it is ordered that  
the C.P.R., according to its powers and  
as required by shippers, supply heaters  
in all cars furnished for the receipt of  
vegetables in carloads, subject to the  
charges provided for in its published and  
filed tariff for cars so supplied and fur-  
nished; and it is also ordered that heaters  
supplied by shippers when the said rail-  
way company is unable to comply with  
the provisions of this order be returned  
by the said railway company, and by  
other railway companies subject to the  
board's jurisdiction, in cases of joint  
movements, free of charge to the point of  
shipment of the said vegetables; and it is  
further ordered that schedules giving  
effect to this order be forthwith published  
and filed so as to give one day's notice to  
the board.

## Transfer Track at Yorkton.

27845. Nov. 8. Re order 25724, Dec.  
15, 1916, authorizing Canadian Northern  
Saskatchewan Ry. (Wroxton Westerly  
Branch) to construct a transfer track be-  
tween its railway and the C.P.R., in the  
n. w.  $\frac{1}{4}$  of sec. 36, and the n. e.  $\frac{1}{4}$  of sec.  
35, Tsp. 25, R. 4, west of second meridian,  
at Yorkton, Sask.; and re order 27559,  
Aug. 14, 1918, apportioning the cost of  
the said transfer track; and re application  
of Canadian Northern Saskatchewan Ry.  
for an order suspending order 2559, Aug.  
14, 1918, apportioning the cost of the  
transfer track. Upon reading what is  
filed in support of the application, and  
on behalf of the C.P.R., and upon the re-  
port and recommendation of the board's  
Chief Traffic Officer, it is ordered that  
order 27559, apportioning the cost of the  
transfer track, be suspended until such  
track has been constructed and in opera-  
tion for three months, at which time the  
matter may be dealt with again upon the  
basis of the actual results of the opera-  
tion.

## Local Switching Charges.

278661. Re application of Toronto  
Board of Trade, Canadian Explosives,  
Ltd., Montreal, and Canadian Manufac-  
turers' Association for an order disallow-  
ing the increased tariffs of local switching  
charges of the Grand Trunk, Canadian  
Pacific, and Canadian Northern Railways,  
filed to become effective Nov. 18, 1918.  
Upon reading what is filed in support of  
the application and the report and recom-  
mendation of the board's Chief Traffic  
Officer, it is ordered that the application  
be dismissed, and that the following  
tariffs showing the proposed increases in  
local switching charges to become effec-  
tive Nov. 18, be suspended pending hear-  
ing and order of the board: Canadian  
Northern, C.R.C. E. 1151; Canadian Pac-  
ific, C.R.C. E. 3588; Grand Trunk, C.R.C.  
E. 4055.

## Freight Rates on Calf Meal.

27863. No. 15. Re application of the  
W. A. Jenkins Manufacturing Co., Lon-  
don, Ont., for application of special mile-  
age grain products tariff rates on ship-  
ments of calf meal. Upon hearing the  
matter at Toronto, June 24, the applicant  
company, the Canadian Freight Associa-  
tion, and the C.P.R. being represented at  
the hearing, and what was alleged; and  
upon reading the further submissions  
filed and the report and recommendation  
of the board's Chief Traffic Officer, it is  
ordered that in the case of mixed car-  
loads consisting of grain or grain pro-  
ducts, as defined in the special tariffs ap-  
pertaining thereto, and calf meal, from

one shipper to one consignee, and shipped  
from jobbing or redistributing centers  
other than the point or points of manu-  
facture of the calf meal whence specific  
commodity rates have been, or may be,  
published, the 8th class rates shall apply  
on the calf meal; the aggregate minimum  
weight of such mixed carloads to be that  
of the said special tariffs on grain and  
grain products; and it is further ordered  
that the said application, except as above  
provided, be dismissed.

## Heater Charges for Bananas.

27886. Nov. 25. Re application of  
C.P.R., under sec. 29 of the Railway Act,  
for an order rescinding order 27461, July  
22, 1918, made upon the complaint of  
Plunkett & Savage, against a heater  
charge of \$22.50 a car from Minneapolis,  
Minn., to Calgary, via the Minneapolis,  
St. Paul & Sault Ste. Marie and Canadian  
Pacific Railways, on five carloads of  
bananas ex New Orleans, declaring that  
the said heater charge was wrongfully  
made and authorizing the applicant com-  
pany to repay to the complainants the  
excess amount charged and collected by  
it on the said shipments. Upon reading  
what is filed in support of the application  
and upon the report of the board's Chief  
Traffic Officer, it is ordered that the appli-  
cation be dismissed, and that the said  
order 27461 be suspended pending hear-  
ing and further order of the board.

27887. Nov. 25. Re application of  
C.P.R., under sec. 29 of the Railway Act,  
for an order rescinding order 27458, July  
22, made on the complaint of the Vipond  
Fruit Co., Winnipeg, against a heater  
charge of \$15.00 a car on bananas from  
Minneapolis, Minn., to Winnipeg, declar-  
ing that the said heater charge was  
wrongfully made and authorizing the ap-  
plicant company to refund the said  
amount to the complainant company. Upon  
reading what is filed in support of the  
application and upon the report of the  
board's Chief Traffic Officer, it is ordered  
that the application be dismissed, and  
that the said order 27458 be suspended,  
pending hearing and further order of the  
board.

## Trackmen's Eyesight and Hearing.—

The Board of Railway Commissioners has  
issued the following circular:—"The  
board has given careful consideration to  
the employment by railways of trackmen  
suffering disability from defective hear-  
ing and eyesight, and to accidents result-  
ing therefrom, and while realizing the  
desirability, owing to the present short-  
age of unskilled labor, of hampering the  
railways as little as possible in their  
selection of this class of labor, it is of  
the opinion that where a trackman is em-  
ployed, the foreman engaging him might  
reasonably satisfy himself that the can-  
didate for employment suffers no such  
serious physical disability with respect to  
hearing and eyesight as will render him  
specially liable to accident, or increase  
the hazard of the employment for which  
he is engaged; and the co-operation, as  
far as possible, of the railways is there-  
fore asked in furtherance of this protec-  
tion."

Eastern Canadian Passenger Associa-  
tion.—Owing to the resignation of the  
chairman, A. L. Miller, formerly General  
Agent, New York Central Rd., at Mont-  
real, on his appointment to a similar po-  
sition at Albany, N.Y., A. J. Parr, G.F. &  
P.A., Timiskaming & Northern Ontario  
Ry., presided at the association's last two  
meetings. The election of a chairman to  
succeed Mr. Miller will be made at the  
January meeting.

## The Canadian Railway War Board's Work.

**Canadian Railway Board of Adjustment No. 1.**—Owing to ill health, U. E. Gillen, Vice President, G.T.R., Transportation and Maintenance, has resigned the adjustment board's chairmanship and has been succeeded by S. N. Berry, Vice President, Order of Railway Conductors; Geo. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., being elected Vice Chairman. The other members of the board are:

Railway representatives, A. D. MacTier, Vice President, Eastern Lines, C.P.R.; W. D. Robb, Vice President, Mechanical Department, and acting Vice President, Transportation and Maintenance, G.T.R.; S. J. Hungerford, Assistant Vice President, Canadian Northern and Canadian Government Rys.; A. J. Hills, Assistant to President, Canadian Northern and Canadian Government Rys.

Railway employes organizations' representatives: Ash Kennedy, A.G.C.E., Brotherhood of Locomotive Engineers; G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Enginemen; S. N. Berry, Vice President, Order of Railway Conductors; Jas. Murdock, Vice President, Brotherhood of Railroad Trainmen; J. M. Mein, Deputy President, Order of Railway Telegraphers; Wm. Dorey, Vice President, International Brotherhood of Maintenance of Way Employes.

**Committee on Transportation-Demobilization.**—As a result of several conferences at Ottawa between the board's executive and representatives of the Dominion Government, to arrange for handling troops and civilians returning from overseas, it has been decided to place the details of arranging the traffic, which will be quite heavy, in the hands of a sub-committee of the board, composed of railway passenger traffic department officers, who have given particular attention to the handling of troops since Canada entered the war. The officers appointed are: Walter Maughan, A.G.P.A., Canadian Pacific, Montreal, chairman; H. H. Melanson, P.T.M., Canadian Government Railways, Moncton, N.B.; and C. W. Johnston, A.G.P.A., Grand Trunk, Montreal. This committee will see to the provision of the necessary equipment, the routing of traffic via lines which may be in a position to handle it best at the time, and other matters connected with the management of the traffic. The committee, which has its headquarters in Montreal, will work in close conjunction with Col. Clarke, Director of Supplies and Transport, Militia Department, Ottawa, who will act in an advisory capacity to the committee.

**Freight Shed Hours.**—Referring to circular 83 and the board's telegram of Oct. 10, concerning change in opening and closing hours of freight sheds. The effective date of this arrangement has been further postponed until Jan. 1, 1919, in order to provide time for further enquiries, the necessity of which has developed.

**Notice of Changes in Handling Traffic.**—It has come to the board's notice that occasionally changes are made by railways in their arrangements for the handling of traffic and that the public is unnecessarily inconvenienced through such changes being made effective before reasonable notice is given. There would seem to be no reason, except where immediate action is necessary, as in the case of embargo restrictions at times, for not giving the public notice of contemplated

changes which directly affect the shippers' forwarding arrangements, etc., and it is directed, therefore, that until further advised, member lines give the public not less than 10 days notice prior to the effective date of such changes.

**Ontario Operating Committee.**—The board has appointed a committee to supervise and regulate the movement of traffic in Ontario, so as to avoid congestions. In order that the greatest degree of satisfaction possible may be given to the public, its members will seek the co-operation of boards of trade and others. The members of the committee are: J. Balkwill, Superintendent, Canada Division, Michigan Central, St. Thomas; C. G. Bowker, General Superintendent, Ontario Lines, G.T.R., Toronto; D. Crombie, General Superintendent, Ontario Division, Canadian Northern, Toronto; W. R. Davidson, General Superintendent, Eastern Lines, G.T.R., Montreal; H. T. Malcolmson, General Superintendent, T.H. & B. Ry., Hamilton, and Allan Purvis, General Superintendent, Ontario District, C.P.R., Toronto. The committee, which will have its headquarters at Toronto Union Station, will hold its first meeting there Dec. 4.

### Appointments to Board of Railway Commissioners.

The terms for which D'Arcy Scott was appointed Assistant Chief Railway Commissioner for Canada and for which S. J. McLean was appointed as one of the commissioners having expired, the Dominion Government has re-appointed Mr. McLean as a commissioner, and has appointed J. G. Rutherford, of Calgary, Alta., as another commissioner. No one has been designated as Assistant Chief Commissioner.

**Simon James McLean** was born in Quebec, June 14, 1871, and was educated at private and public schools there, and at Cumberland, Ont., and later, at the Ottawa Collegiate Institute, and from 1890 to 1894 was a student in the Department of Political Science in the University of Toronto. Among the academic positions held by him at various times, are 1894-5, MacKenzie Fellow, University of Toronto; 1895-6, University Fellow in Economics, Columbian University, New York; 1896-7, University Fellow in Economics, Chicago University; 1897-1902, Professor of Economics, and Sociology, University of Arkansas; 1902-06, Associate Professor of Economics, Leland-Stanford Jr. University, California; 1906-08, Associate Professor of Political Economy, University of Toronto. He is a B.A. and LL.B. of Toronto University; M.A. of Columbia University, and Ph.D. of Chicago University. While in California he was elected to the chairmanship of the transportation section of the Commonwealth Club of San Francisco. He has been a prolific writer on transportation subjects, having contributed largely to technical periodicals, reviews, etc. From 1898 to 1901 he acted in an advisory capacity to the Department of Railways and Canals, and prepared a special report which was subsequently published by that department. In 1901 he was appointed special commissioner on railway rate grievances for Canada, and conducted investigations throughout the Dominion. The findings of this investigation were embodied in a report which recommended that a railway

commission be organized for Canada, with power over rates and classification, and that it should have transferred to it the functions hitherto exercised by the Railway Committee of the Privy Council. These recommendations were adopted by the government, and embodied in the Railway Act of 1903. From 1904 to 1905 he was expert agent of the U.S. Census Bureau, and of the Interstate Commerce Commission, and conducted investigations to determine the valuation of railway property in the Western States, and in 1908 he acted as chairman of conciliation boards to investigate disputes in two mining cases. He was first appointed to the Board of Railway Commissioners for Canada, Sept. 17, 1908, for 10 years.

**John Gunion Rutherford, C.M.G.**, who has been appointed a member of the Board of Railway Commissioners for Canada, was born at Mountain Bank, Peeblesshire, Scotland, Dec. 25, 1857, and educated at Glasgow High School, Ontario Agricultural College, Guelph, and Ontario Veterinary College, Toronto, graduating as veterinary surgeon, with gold medal, in 1879. He practised in Canada, the United States and Mexico for several years, settling in Portage la Prairie, Man., in 1884, and acted as veterinary officer to the Northwest Field Force in the rebellion in 1885, for which he holds the medal and clasp. From 1887 to 1892 he was Veterinary Inspector for Manitoba, and from 1890 to 1894, associate Editor, Nor' West Farmer. In 1892 he was elected to the Manitoba Legislature as member for Lakeside, and represented the constituency to 1896; 1896 to 1900, editor, Manitoba Liberal; 1897 to 1900, member of the House of Commons for Macdonald, Man. He was appointed Chief Veterinary Inspector for Canada in 1902, and his title was changed in 1904 to Veterinary Director General. In 1906 he was also appointed Live Stock Commissioner for Canada, and in 1908 was elected an honorary associate of the Royal College of Veterinary Surgeons, and, as a delegate, attended the International Institute of Agriculture, Rome, Italy; International Congress of Tuberculosis, Washington, D.C., and was elected President of the American Veterinary Medical Association. In 1909 he acted as chairman of the international committee on bovine tuberculosis, and was President of the C. S. Association for 1909-10. He was made a Companion of the Order of St. Michael and St. George in 1910, resigned the position of Live Stock Commissioner in July, 1911, and that of Veterinary Director General in Aug., 1912, when he was appointed Superintendent of Animal Husbandry, Department of Natural Resources, C.P.R., Calgary, Alta., which position he held until his present appointment.

**Gilbert Murray**, whose appointment as Resident Engineer, Grand Trunk Pacific Ry., Melville, Sask., was announced in our last issue, was born at Boston, Mass., in March, 1883, and from 1899 to 1901, was rodman and instrument man for Hyde & Sherry, Boston, Mass.; 1902 to 1904, Inspecting Engineer of the water system, Sydney, N.S.; 1904 to 1912, leveler, draftsman, transit man and Resident Engineer on location and construction of main line and branches in Alberta and British Columbia, Grand Trunk Pacific Ry.; 1913 to 1917, location and reconnaissance engineer, Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta.; 1917 to Sept. 1, 1918, instrument man, Grand Trunk Pacific Ry., Regina, Sask.

# Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

**Algoma Central & Hudson Bay Ry.**—S. WORTH has been appointed Superintendent in charge of operations, with supervision over train, yard and station service, reporting to the General Superintendent. Office, Sault Ste. Marie, Ont.

**W. C. PAUL**, heretofore Assistant Trainmaster, Steelton, Ont., has been appointed Trainmaster, reporting to the Superintendent. Office, Sault Ste. Marie, Ont.

**A. P. WILSON**, heretofore Local Freight Agent, C.P.R., Lethbridge, Alta., has been appointed Joint Agent, A.C. & H.B.R. and Canadian Government Rys., Hearst, Ont.

**Canadian Government Rys.**—See Canadian Northern Ry.

**Canadian Northern Ry. System**—Canadian Government Rys.—The Dominion Government has placed the management of the Canadian Government Railways under a board of management, consisting of the C.N.R. directors, of which D. B. HANNA is President. For the present the lines will be operated under the joint names given above, but it is said that legislation will be introduced, at the Dominion Parliament's next session, to change the designation to Canadian National Railways.

**R. C. VAUGHAN**, Assistant to President, C.N.R., has had his jurisdiction extended to include the C.G.R. Office, Toronto.

**Z. A. LASH, K.C.**, Senior Counsel, C.N.R., Toronto, has had his jurisdiction extended over the C.G.R. Office, Toronto.

**F. H. PHIPPEN, K.C.**, General Counsel, C.N.R., having resigned, **GERARD RUEL**, heretofore General Solicitor, C.N.R., succeeds him as Counsel, with jurisdiction over C.N.R. and C.G.R. lines. Office, Toronto.

**M. H. MACLEOD**, Vice President, C.N.R., in charge of operation, maintenance and construction, has had his jurisdiction extended to include all C.N.R. and C.G.R. lines. Office, Toronto.

**S. J. HUNGERFORD**, heretofore General Manager, Eastern Lines, C.N.R., has been appointed Assistant Vice President, with jurisdiction over all C.N.R. and C.G.R. lines. Office, Toronto.

**C. A. HAYES**, heretofore General Manager, Eastern Lines, C.G.R., Moncton, N.B., has been appointed Vice President, in charge of traffic, with jurisdiction over all C.N.R. and C.G.R. lines. Office, Toronto.

**GEO. H. SHAW**, General Traffic Manager, C.N.R., Toronto, is reported to have resigned.

**A. J. HILLS**, heretofore Assistant to the Executive, C.N.R., has been appointed Assistant to the President, with jurisdiction over all C.N.R. and C.G.R. lines. He will continue to act as special representative of the executive in connection with adjustment of wages and working conditions. In addition to performing such other duties as may be assigned to him, he will exercise supervision over the Resources Department. Office, Toronto.

**E. LANGHAM**, heretofore General Purchasing Agent, C.N.R., has had his jurisdiction extended to include all C.G.R. lines. Office, Toronto.

**LOUIS LAVOIE**, heretofore Purchasing Agent, C.G.R., Railways Department,

Ottawa, has been appointed Assistant General Purchasing Agent, C.N.R. and C.G.R. Office, Toronto.

**C. E. FRIEND**, heretofore General Auditor, Winnipeg, has been appointed Comptroller. Office, Toronto.

C. A. Hayes,  
Vice President, Traffic, Canadian Northern Ry.  
System and Canadian Government Rys.

Samuel J. Hungerford,  
Assistant Vice President, Canadian Northern Ry.  
System, Canadian Government Rys.

**J. D. MORTON**, heretofore Assistant Comptroller, has been appointed General Auditor. Office, Toronto.

**R. S. GOSSETT**, Auditor of Disbursements, C.N.R., Toronto, is continued in that position. Office, Toronto.

**T. W. RALPH**, heretofore chief clerk, Auditor of Disbursements' office, C.N.R., Toronto, has been appointed Assistant Auditor of Disbursements, C.N.R. Office, Toronto.

**H. G. FOREMAN**, Chief Accountant, C.N.R., Toronto, is continued in that position. Office, Toronto.

**W. F. ANDERSON**, heretofore Auditor Freight and Passenger Receipts, Western Lines, C.N.R., Winnipeg, has been appointed Auditor of Freight Receipts, C.N.R. Office, Toronto, from Jan. 1, 1919.

**E. A. KENDREE**, heretofore chief clerk, Auditor Freight and Passenger Receipts' office, freight branch, Western Lines, C.N.R., Winnipeg, has been appointed Assistant Auditor of Freight Receipts, C.N.R. Office, Toronto, from Jan. 1, 1919.

**H. G. HANNA**, heretofore Auditor, Ontario and Quebec Lines, C.N.R., Toronto, has been appointed Auditor of Passenger Receipts, C.N.R. Office, Toronto.

**F. J. GASCOIGNE**, heretofore chief clerk, Auditor of Freight and Passenger Receipts' office, passenger branch, Western Lines, C.N.R., Winnipeg, has been appointed Assistant Auditor of Passenger Receipts, C.N.R. Office, Toronto, from Jan. 1, 1919.

**A. C. EGAN**, heretofore Auditor of Agencies, Western Lines, C.N.R., Winnipeg, has been appointed Auditor of Agencies, C.N.R. Office, Toronto, from Jan. 1, 1919.

**W. L. BROWN**, heretofore chief clerk, Auditor Ontario and Quebec Lines' office, C.N.R., Toronto, has been appointed Assistant Auditor of Agencies, C.N.R. Office, Toronto.

**H. F. PARKER**, heretofore Freight Overcharge Adjuster, Western Lines, C.N.R., Winnipeg, has been appointed Auditor of Freight Overcharges, C.N.R. Office, Toronto, from Jan. 1, 1919.

The accounting and auditing departments' offices will be located at 68 and 74 King St. East, Toronto.

**J. P. DRISCOLL**, heretofore Superintendent of Car Service, Western Lines, C.N.R., Winnipeg, has been appointed General Superintendent of Car Service, C.N.R. and C.G.R. Office, Toronto.

**E. CRAWFORD**, heretofore Superintendent of Car Service, Eastern Lines, C.N.R., Toronto, has been appointed Superintendent of Car Service, Western Lines, C.N.R. and C.G.R. Office, Winnipeg.

**W. W. SLOAN**, heretofore Special Agent, C.N.R., Toronto, has resigned.

**F. P. BRADY**, heretofore General Manager, Western Lines, C.G.R., Winnipeg, has been appointed General Manager, C.N.R. lines east of Port Arthur, Ont., and all C.G.R. lines east of O'Brien, Que. Office, Montreal.

**W. A. KINGSLAND**, heretofore General Superintendent, Quebec Lines, C.N.R., has been appointed Assistant General Manager, Eastern Lines, C.N.R. and C.G.R. Office, Montreal.

**A. E. WARREN**, General Manager, Western Lines, C.N.R., has had his jurisdiction extended to include all C.G.R. lines west of O'Brien, Que. Office, Winnipeg.

**G. N. PALMER**, heretofore chief clerk to Auditor of Disbursements, C.G.R., has been appointed Auditor of Disbursements, C.G.R., vice C. F. Burns, deceased. Office, Moncton, N.B.

**G. ROSEBUSH**, heretofore Roadmaster, Trenton and Picton Subdivisions, C.N.R., Toronto, has been appointed

Roadmaster, Tweed and Brockville Subdivisions, C.N.R., vice C. Martin, transferred. Office, Yarker, Ont.

W. M. JACKLIN, heretofore Superintendent of Track, Ontario Division, C.N.R., Toronto, has been appointed Roadmaster, Trenton and Picton Subdivisions, C.N.R., including Trenton yard, vice G. Rosebush, transferred. Office, Toronto.

A. H. CAVANAGH, heretofore Trainmaster, C.N.R., Capreol, Ont., has been appointed Assistant Superintendent, C.N.R., there.

J. DUGUID has been appointed Locomotive Foreman, C.N.R., Capreol, Ont.

A. P. WILSON, heretofore Local Freight Agent, C.P.R., Lethbridge, Alta., has been appointed Joint Agent, C.G.R. and Algoma Central and Hudson Bay Ry., Hearst, Ont.

J. B. KELLY has been appointed Inspector, Sleeping and Dining Car Department and News Service, Western Lines, C.N.R., vice W. C. Potts, resigned. Office, Winnipeg.

F. BRADLEY, heretofore Equipment Inspector, has been appointed Platform Inspector, Sleeping and Dining Car Department and News Service, Western Lines, C.N.R., vice E. H. Drew, resigned. Office, Winnipeg.

A. E. McALLAN has been appointed Equipment Inspector, Sleeping and Dining Car Department and News Service, Western Lines, C.N.R., vice F. Bradley, promoted. Office, Winnipeg.

W. B. STEEVES, heretofore Assistant Master Mechanic, C.N.R., Saskatoon, Sask., has been appointed Locomotive Foreman, C.N.R., there, vice A. Mallinson, transferred.

A. MALLINSON, heretofore Locomotive Foreman, C.N.R., Saskatoon, Sask., has been appointed Locomotive Foreman, Calgary, Alta., vice F. Clark, who has left the service.

**Canadian Pacific Ry.**—GRANT HALL, Vice President, has been elected a director and member of the executive committee, vice Sir George Bury, resigned. Office, Montreal.

O. PEPIN has been appointed Chief Dispatcher, Farnham, Que., vice A. E. Gough, deceased.

R. WALTON, heretofore relieving Master Mechanic, Ontario District, Toronto, has been appointed Division Master Mechanic, Farnham Division, Quebec District, vice W. Wells, transferred. Office, Farnham, Que.

W. A. BLACK has been appointed Locomotive Foreman, Farnham, Que., vice D. W. Watson, transferred.

D. W. WATSON, heretofore Locomotive Foreman, Farnham, Que., has been appointed Locomotive Foreman, Sortin, Montreal.

T. H. HAMILTON, heretofore Assistant Superintendent, Trenton Division, Ontario District, Trenton, Ont., has been appointed Assistant Superintendent, Smiths Falls Division, Quebec District, vice J. A. Cook, resigned. Office, Smiths Falls, Ont.

C. CONNORS, heretofore Division Master Mechanic, Bruce Division, Ontario District, Toronto, has been appointed Road Foreman of Locomotives, Havelock, Ont.

J. A. TOBIN heretofore Assistant Superintendent, Bruce Division, Ontario District, Toronto, has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice T. H. Hamilton, transferred. Office, Trenton, Ont.

H. C. TAYLOR has been appointed Car Service Agent, Ontario District, vice G. T. Coleman, transferred. Office, Toronto.

A. A. SMITH has been appointed Trainmaster, Ignace, Ont., vice J. L. Jamieson, promoted.

J. L. JAMIESON, heretofore Trainmaster, Ignace, Ont., has been appointed Superintendent, Kenora Division, Manitoba District, vice J. M. MacArthur, Office, Kenora, Ont.

E. C. P. CUSHING, formerly Secretary to the President (Lord Shaughnessy), and latterly Assistant to the General Purchasing Agent at Montreal, has been appointed Assistant Purchasing Agent at Winnipeg, not Purchasing Agent, as stated in our last issue. F. E. GAUTIER is still Purchasing Agent at Winnipeg. The mistake was not ours, but was caused by incorrect information sent us from Montreal.

R. ARMSTRONG, heretofore Superintendent, Souris Division, Manitoba District, Souris, Man., has been appointed Superintendent, Brandon Division, Manitoba District, vice C. S. Mahaig, whose appointment as Superintendent, Cran-

Frank P. Brady,  
General Manager, Eastern Lines, Canadian Northern Ry. System, Canadian Government Rys.

brook Division, British Columbia District, was announced in our last issue. Office, Brandon, Man.

A. C. HARSHAW, heretofore Superintendent, Cranbrook Division, British Columbia District, Cranbrook, B.C., has been appointed Superintendent, Souris Division, Manitoba District, vice R. Armstrong, transferred. Office, Souris, Man.

A. S. McDONALD, formerly Locomotive Foreman, Regina, Sask., who was mentioned in our last issue, as having been transferred, has been superannuated.

A. T. SHORTT having resumed his duties as Superintendent of Shops, Ogden, Alta., W. H. WORTMAN has returned to his position as Division Master Mechanic, Cranbrook, B.C.

W. H. WORTMAN, Division Master Mechanic, Cranbrook Division, British Columbia District, Cranbrook, having returned after leave of absence, J. W. JACKSON has resumed his position as Locomotive Foreman, Kamloops, B.C.

RICHARD MARPOLE'S title of General Executive Assistant has been changed to Executive Agent. Office, Vancouver.

N. J. KER, C.E., Townsite Agent and Engineer, Vancouver, has also been appointed Assistant Executive Agent in British Columbia. Office, Vancouver.

J. M. MacARTHUR, heretofore Superintendent, Kenora Division, Manitoba District, Kenora, Ont., has been appointed Superintendent, Medicine Hat Division, Alberta District, vice C. A. Cotterell, whose appointment as Assistant General Superintendent, British Columbia District, Vancouver, was announced in our last issue.

**Canadian Pacific Ocean Services, Ltd.**—Major H. MAITLAND KERSEY, D.S.O., London, Eng., has resigned the position of Managing Director.

C. E. BENJAMIN, General Passenger Agent, Trans-Pacific Lines, Montreal, is reported to have been appointed Passenger Traffic Manager in full charge of the services both on the Atlantic and Pacific Oceans. Office, Montreal.

**Grand Trunk Ry.**—W. A. BOOTH, heretofore assistant chief draftsman, Motive Power Department, has been appointed chief draftsman, Motive Power Department, Montreal, vice Jas. Powell.

W. J. HYMAN, heretofore assistant chief draftsman, Car Department, Montreal, has been appointed chief draftsman, Car Department, there.

W. A. WAUGH has been appointed foreman, iron machine shop, Montreal, vice W. A. Pitt.

T. MORTON has been appointed foreman, passenger car shop, Montreal, vice J. Brooks.

H. H. HAMILL, heretofore Commercial Agent, Detroit, Mich., has been appointed General Agent, Freight Department, Lines in Canada. Office, Detroit, Mich.

E. F. FLINN has been appointed General Western Freight Agent, Lines in Canada. Office, Chicago, Ill.

**Grand Trunk Pacific Ry.**—F. HOLLAND, heretofore foreman boilermaker, Melville, Sask., has been appointed Travelling Boiler Inspector, Transcona, Man.

R. MARSHALL has been appointed foreman boilermaker, Melville, Sask., vice F. Holland, promoted.

H. SAUNDERS has been appointed Car Foreman, Biggar, Sask., vice T. E. Annesly, transferred.

W. E. BELL has been appointed acting Division Superintendent of Telegraphs, Lines in Alberta and British Columbia, with jurisdiction over all matters pertaining to construction and maintenance of telegraph and telephone lines and operation of railway and commercial telegraphs, vice W. J. Rooney, on leave of absence. Office, Edmonton, Alta.

E. WARNING has been appointed Roadmaster, Edmonton to Obed, Districts 7 and 8, vice O. H. Anderson, transferred. Office, Edson, Alta.

O. H. ANDERSON, heretofore Roadmaster, Edmonton to Obed, Districts 7 and 8, has been appointed Roadmaster, Alberta Coal and Mountain Branches. Office, Edson, Alta.

J. A. M. BROWN has been appointed Roadmaster, McBride, B.C., vice J. Carlson, transferred.

J. CARLSON, heretofore Roadmaster, McBride, B.C., has been appointed Roadmaster, Endako, B.C.

C. E. JENNEY, General Agent, Passenger Department, G.T.P.R., Vancouver, B.C., has had his jurisdiction extended to cover the G.T.P. Coast Steamship Co. in British Columbia, south of Rivers Inlet,

Vancouver Island, the States of Idaho, Oregon and Washington, and Utah as far south as Ogden and Salt Lake City, and the portion of Montana west of and including Shelby Jct. to Helena and Butte.

T. E. ANNESLY, heretofore Car Foreman, Biggar, Sask., has been appointed Car Foreman, Prince Rupert, B.C., vice F. E. Dymond, who has left the service.

**Michigan Central Rd.**—J. M. CAMPBELL has been appointed Assistant Division Engineer, St. Thomas, Ont., vice W. J. Shaw, promoted.

**Pere Marquette Ry.**—P. M. BOYLE, Trainmaster, Detroit, Mich., is reported to have been appointed Trainmaster, Canadian Division, St. Thomas, Ont.

**United States Railroad Administration.** Eastern Region, comprising Pere Marquette Ry., Ann Arbor Rd., Detroit & Toledo Shore Line Rd., Port Huron Union Depot Rd., Lake Michigan Car Ferry Association, Grand Trunk Western Lines Rd., Detroit & Mackinac Rd., Detroit, Bay City & Western Rd., Port Huron Southern Rd., and Port Huron & Detroit Rd. The following appointments have been made: Assistant General Passenger Agents, J. D. McDonald, Chicago, Ill.; John Dunphy, Detroit, Mich.; General Baggage Agent, A. E. Plumer, Detroit, Mich.; Division Passenger Agents, O. L. Kinney, Chicago, Ill.; J. W. Kearns, Detroit, Mich.; N. De Young, Grand Rapids, Mich.; F. A. Young, Saginaw, Mich.; J. K. Cooper, Toledo, Ohio; R. W. Youngs, London, Ont.; Travelling Passenger Agent, G. W. Norman, Detroit, Mich.

### Edward Fitzgerald's New Appointment.

Edward Fitzgerald, formerly Assistant General Purchasing Agent, C.P.R., Montreal, and since early in the war Purchasing Agent, and subsequently Assistant to the Chairman, Imperial Munitions Board, Ottawa, has been appointed Vice Chairman of the Hudson's Bay Co.'s Canadian Advisory Board, with office at Winnipeg. Sir Augustus Nanton, of Winnipeg, who is one of the C.P.R. directors, and Vice President of the Winnipeg Electric P. is chairman of the H.B.C. Canadian Advisory Board, among the other members being G. W. Allan, K.C., M.P., and G. F. Galt, Winnipeg.

As Mr. Fitzgerald will devote his whole time to H.B.C. affairs, it is safe to assume that he will be its chief active executive officer in Canada, with jurisdiction over its vast fur and other trading, ocean and inland navigation and its large land interests. Mr. Fitzgerald left Ottawa for London, Eng., towards the end of November, to consult with the H.B.C. directors, expecting to return to Ottawa in January to clear up some Imperial Munitions Board work and take up his new duties in Winnipeg in February.

He was born at Ottawa, Ont., Nov. 9, 1874, and educated at the Model School there. He entered C.P.R. service in July, 1892, as junior clerk in the Purchasing Department, and was from Oct., 1898, to May, 1905, Commissary Agent; May, 1905, to Mar., 1910, Assistant to Purchasing Agent; Mar., 1910, to May, 1915, Assistant General Purchasing Agent. In May, 1915, he was assigned to the British Government as officer in charge of the War Office Purchasing Agency in Canada, and in Dec., 1915, was appointed Purchasing Agent, Imperial Munitions Board, and June, 1916, Assistant to the Chairman, I.M.B. He was made a Commander of the Order of the British Empire in Jan., 1918.

## Steel Rails and Rolling Stock Orders and Railway Betterments and Extensions Now to Proceed.

Ottawa press dispatch, Nov. 12.—Action is being taken promptly by the Dominion Government along the lines set forth recently by the Finance Minister to keep the wheels of industry turning in Canada during the period of transition from war to peace conditions, and to absorb labor which will be released by the cessation of production of munitions of war. Already orders have been placed for 200,000 gross tons of 85-lb. steel rails, which will be used in the making of required betterments and extensions on Canadian railways. The Dominion Iron & Steel Co., of Sydney, N.S., has been given an order for 125,000 gross tons, and the Algoma Steel Corporation, Sault Ste. Marie, an order for 75,000 tons. The rolling of these

E. C. P. Cushing,  
Assistant Purchasing Agent, C.P.R., Winnipeg.

rails is to begin very shortly, and deliveries are to be made at the rate of about 20,000 tons a month by each company. The price to be paid is to be determined later and is to be based on the cost of production. These orders will be followed by orders to various companies for accessories, angle bars, bolts, spikes, and tie plates to the extent of 65,000 tons. Their production will give employment to a considerable number of workmen, and the laying of the rails next spring will also call for many laborers. It is stated that these orders will be succeeded by others which will keep the rail mills engaged for a year or more.

At the conclusion of a conference today (Nov. 12) between Hon. A. K. Maclean and other members of the Dominion Government's Reconstruction and Development Committee and representatives of the Canadian Government Railways, Canadian Northern, Canadian Pacific and Grand Trunk, it was announced that big orders for rolling stock for the Canadian Northern and Canadian Government Railways will be placed shortly by the government with the several car building

companies of the country, and will keep them busy for a year to come. At present the Canadian Government Railways and the Canadian Northern are much below their requirements of rolling stock. The Grand Trunk will also require some cars. The Canadian Pacific is engaged upon a car building programme which will keep its shops busy at least nine months. When materials become available in larger quantities the company will, it is said, have additional work for its plant. At present car building plants, with one exception, are all engaged upon orders which will not be completed before the end of the year.

With respect to betterments and extensions over Canadian railways, it is pointed out that the Canadian Northern has certain uncompleted sections to be put into condition for operation. There are also certain projected lines, construction of which may be undertaken if economic conditions warrant. The railways are now suffering from a shortage of labor. They are in a position to employ a considerable number of workers. Next spring they will require more men for betterments and maintenance of way, and a still larger number if new construction is undertaken. Hence those who attended the conference separated with a feeling of optimism.

Ottawa press dispatch, Nov. 27.—Presidents of the big Canadian railway companies are in conference with the government today, respecting their plans for after war developments. There was a general discussion on the question of extension and equipment. It is the intention of all the companies to go ahead with their construction programme on such lines as are considered necessary. All the roads will do more or less replacement work and also proceed with numerous branch feeders, especially in the west, that have been suspended since the war began. They also intend to place heavy orders for equipment in locomotives, freight and passenger cars. Their programme will absorb a great deal of the floating labor of the country.

### Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co.'s operators have been placed on the same wage basis as C.P.R. telegraphers, increases to date from Sept. 1, by an award of the Canadian Railway War Board's committee.

The Western Union and Postal Telegraph services are consolidated, from Dec. 1, under U.S. Government control. It is announced that the U.S. Postmaster General has fixed the compensation to be paid annually, but the amount has not been made public. The Postal Telegraph Co. asked for \$3,800,000 a year and interest, but the Post Office Department is reported to have stated that as the company had been unable to furnish any approximate valuation of its property, an award had been made on the best information available, on the same principles used in making the award for the Western Union agreement. No physical consolidation of the two companies is contemplated. The Postal Telegraph Co. states that it will fight the award in the U.S. Court of Claims.

# Electric Railway Department

## Increases in Electric Railway Freight and Passenger Rates.

**British Columbia Electric Ry.**—The Board of Railway Commissioners passed order 27868, Nov. 19, as follows:—Re application of British Columbia Electric Ry. for permission to increase commutation fares for carriage of passengers between points on Vancouver, Fraser Valley and Southern Railway: Upon hearing the application at Ottawa, Aug. 27, in the presence of counsel for the company and the Municipality of Burnaby, and upon reading the further written submissions filed, it is ordered that the company be authorized to charge the increased commutation fares as published in its tariff C.R.C. 7 filed with the board, and that the said tariff become effective Dec. 1.

Judgment was delivered in Vancouver recently by Justice Macdonald in the action brought by the City of Vancouver against the British Columbia Electric Ry., for an alleged breach of the 1901 agreement in collecting a fare in excess of 5c. The city council in July passed a bylaw authorizing the company to charge a fare of 6c, which the mayor refused to sign. The company nevertheless proceeded to put the bylaw in force. Other factors were brought into the conflict, and on the bylaw being put to a vote of the rate-payers it was defeated. The hearing of arguments was concluded Oct. 29 and judgment was reserved. A Vancouver paper gives the following summary of the judgment:—

Referring to the refusal of the mayor to sign the bylaw, the judge says: "It was the duty of the mayor, under sec. 226 of the Vancouver Incorporation Act, as head of the council to sign such bylaw." He follows this statement with a quotation from the act covering the provision, and adds: "There is no power of veto vested in the mayor, nor can he, as it were, reconsider a bylaw, once it has passed the council."

In referring to the contention that while it might have been the mayor's duty, as a ministerial act, to sign the bylaw, he should not be called upon to do so, in view of the fact that the vote of the electors took place subsequently, which resulted in a decision adverse to the bylaw, the judge says that this fact does not affect the company's legal position in the slightest, if the bylaw were properly passed at the council meeting of July 8.

"In other words," he says, "if such bylaw became effectual so as to support the amending agreement and induced the company to incur a liability the council could not subsequently reconsider or virtually repeal such bylaw through the assistance of an adverse vote of the electors."

Continuing, the judgment points out that the agreement of 1901, in which the street car rates were fixed, contains a provision to the effect that if these are found inadequate, the company may apply to the council for a revision, and it could, if it saw fit, agree to an adjustment. It was contended that this discretionary power was taken away from the council by later amendments, but the judge did not hold with that contention, and quoted voluminous authorities in support of his position.

"In my opinion it was not necessary," he states, "then, nor since, through subsequent legislation, for the city council to submit a bylaw authorizing an agreement with respect to fares, chargeable by the company, to the city electors entitled to vote on money bylaws, for their approval."

The minutes of the council, the judge says, show clearly that the bylaw was given its several readings and passed and signed by the clerk, and that it was doubtless taken for granted by all parties that the procedure bylaw would be complied with. "The company, acting on this reasonable presumption, proceeds to carry out on its part the intention of all parties, that it should agree to pay the increased wages asked by its employees. From the sequence of events, resulting in the apparent passage of the bylaw, I have no reason to doubt that the council was, at the time, acting in good faith. Even apart from the dangers of a threatened sympathetic strike, the council was doubtless very anxious that the then existing disruption of business should speedily terminate.

"Even although the council was acting within its powers in passing the bylaw authorizing the passing of the agreement, and intended it to be effective, can their intention be destroyed by the action of the mayor in withholding his signature?" the judge asks. In reply to this, he states that no authority was submitted to him which, in his opinion, supported an affirmative reply to the question.

As to the power of the council to reconsider such a bylaw, the judgment states that "over a month after it had been passed it could not be reconsidered," and concludes with the statement that if he is right in that conclusion, the mayor has no discretion, but owes a public duty which should be performed by his signing both the bylaw and the agreement and thus render them fully effective, and the company as a party interested has a right to call for the execution of this ministerial act on the part of the mayor. "A time can be limited by the formal order for judgment, within which the mayor should sign the bylaw and agreement."

**Fort William Municipal Ry.**—The Fort William Utilities Committee and the Port Arthur Utilities Commission, sitting jointly, recently decided that for the present there will be no change in the operation or administration of the lines, and that full consideration will be given to the question of fares early in 1920.

The Montreal Tramways Co.'s new franchise gives the Montreal Tramways Commission power to fix rates for school children and apprentices lower than the regular tariff, for use on week days only, between certain specified hours. In the new schedule of fares fixed by the Quebec Public Utilities Commission provision was made for the issue of school children's tickets, but nothing was said about tickets for apprentices. The Montreal Tramways Commission directed, Oct. 10, that children's tickets should be useable by apprentices between 6 a.m. and 7 p.m. The commission administering the city's affairs passed a resolution, Oct. 23, setting out that in its opinion the Montreal Tramways Commission has not the right to

amend the contract between the city and the M.T. Co. as it did, and such a precedent would allow the Tramways Commission in future to modify the contract on other points, without the city's consent. The resolution was rescinded subsequently, and the matter was discussed by the city commissioners Oct. 31, when a resolution was passed asking the Tramways Commission to provide that school children's tickets should be made available for use between 7 a.m. and 7 p.m., instead of between 8 a.m. and 6 p.m. as at present, and that these tickets be made available for use by apprentices between 6 and 8 a.m., and between 5 and 7 p.m.

**Moose Jaw Electric Ry.**—The Moose Jaw, Sask., City Council passed a resolution recently outlining concessions which the city might make to the company to secure better service, and the repair of the South Hill bridge. At a meeting of the city council, Nov. 4, a letter was read from A. H. Dion, General Superintendent, M.J.E. Ry., which said, in part:—"The resolution was submitted to the directors, who instruct me to state that the proposed relief is unsatisfactory and quite inadequate. It appeared that your resolution was passed under a misapprehension as to the conditions. The directors were unanimous in the decision that they could not go on with the operation of the railway under existing conditions, as that would only mean the piling up of constantly increasing losses to the company. The company has borne the burden as cheerfully as possible, always hoping for better conditions, but now the load is too heavy, and the future offers no encouragement. The interests of the shareholders would be served by immediately ceasing the operation of the railway." The letter concluded by stating that a memorial was being prepared by the company for submission to the council at an early date.

The Moose Jaw Board of Trade passed a resolution recently favoring the appointment of a commission to investigate the company's affairs. In the course of the discussion it was suggested that the city council would be justified in offering financial support to the company, in addition to granting a new franchise. (Nov., pg. 505.)

**The Ottawa Electric Ry.** on Oct. 26 filed with the Board of Railway Commissioners the following special passenger tariff, to become effective Nov. 18:—

Zone 1: Within the municipal limits of the City of Ottawa, and beyond to the Experimental Farm, and to Cloverdale Ave. on the Rockcliffe line. Zone 2: West of zone 1, and including McKellar. Zone 3: East of Cloverdale Ave. to and including Rockcliffe Rifle Range. Zone 4: West of McKellar, to and including Britannia-on-the-Bay.

Cash fares, between 6 a.m. and 12 midnight:—

	Adults	Children under 10
Within zone 1, 2, 3 or 4.....	5 cents	3 cents
Between zone 1 and zone 2 or 3	10 "	6 "
Between zone 1 and zone 4....	15 "	9 "
Between zone 2 and zone 3....	10 "	6 "
Between zone 2 and zone 4....	15 "	9 "
Between zone 3 and zone 4....	20 "	12 "

Between 12 midnight and 5.30 a.m., double the above fares.

Special tickets—Between zone 1 and

zone 2 or 3, 3 tickets 25c; between zone 1 and zone 4, 2 tickets 25c.

Workmen's tickets—Good only within zone 1 from first morning trip until 7.30 a.m., and between 5 and 6.30 p.m.:—33 tickets \$1, 8 tickets 25c.

School children, under 14—Good only between 7 and 9.30 a.m., 11.30 a.m. and 1.30 p.m., and 3.30 and 5 p.m.:—40 tickets \$1. One ticket for each zone travelled.

Sunday—7 tickets 25c. One ticket for each zone travelled.

Objections to the tariff having been made by Westboro' Village and Nepean Township, the matter was heard by the Board of Railway Commissioners at Ottawa Nov. 18, when, after argument, the hearing was adjourned for two weeks, the tariff being suspended in the meantime.

**Pictou County Electric Ry.**—The Nova Scotia Board of Commissioners of Public Utilities has issued an order authorizing the company to charge increased fares on its electric railway, and increased rates for electric power, heat and light, from Dec. 1. The first four parts of the order deal with rates for light, heat and power, and the last paragraph deals with fares on the electric railway, as follows:—Cash fare 7c, in each zone. Strips of 8 tickets, 50c; one ticket good for a single fare in each zone. Strips of 10 tickets, 50c; one ticket good for a single fare in each zone on week days only until 8 a.m., and between 5 and 6.30 p.m.

**Port Arthur Civic Ry.**—See Fort William Municipal Ry.

**Regina Municipal Ry.**—Receipts for the 10 months ended Oct. 31, \$194,169.30; passengers carried, 4,164,156, against \$193,740.75 and 4,129,143 for the corresponding 10 months of 1917. The monthly figures for the current year are reported as follows:—

	Passengers carried.	Passenger receipts.
January .....	521,269	\$21,606.70
February .....	418,551	19,433.05
March .....	453,592	21,008.80
April .....	379,641	18,020.70
May .....	401,984	19,182.65
June .....	406,332	19,881.75
July .....	448,742	23,626.20
August .....	443,122	21,461.00
September .....	323,920	15,613.85
October .....	297,003	14,334.60

Commenting on these figures, a local paper says: "The increase to a straight 5c fare is responsible for an increase in revenue of \$20,000 on the 10 months...., the average increase per month is actually higher, as the increased fare was not put into effect until February.... Due to the influenza epidemic, the traffic for October fell off 114,121 passengers, a decrease of 27.76% compared with the passenger traffic for Oct., 1917. In October the total passenger revenue was \$14,334.60, compared with \$17,288.75 in Oct., 1917, a decrease of \$2,954.15, or 17.09%."

**Sherbrooke Ry. & Power Co.**—A press report states that the company applied to the Sherbrooke, Que., City Council Nov. 5 for authority to charge increased fares, and giving notice that in the event of the application being refused it would have to discontinue the electric car service after Nov. 30. An alternative proposition was made that the city acquire the railway at a price to be fixed by arbitration.

**The Winnipeg Electric Ry.**'s application of Oct. 18 to the city council for authority to charge increased fares was published in full in Canadian Railway and Marine World for November. The necessity for applying for relief had been evident for some time, and the public had been educated to this point by advertising, and by the company's bulletin, which is dis-

tributed on the cars every fortnight. The application for relief, however, was hastened by the award of the board of conciliation which investigated demands for increased wages from motormen and conductors, and granted increases representing an addition to the company's pay roll of \$362,000 annually. The company's application to the city council asked for a 6c fare, and 7 children's tickets for 25c, all other fares to be abolished. The council debated the application for three days and the friendly spirit which pervaded the discussion was very marked. The company's General Manager, A. W. McLimont, attended all the sessions and discussed the company's difficulties very frankly. Practically each member of the council admitted the company had established a prima facie case for increased revenue, and expressed the opinion that immediate assistance must be given. Upon the advice of the City Solicitor, however, a motion, which was favorably spoken to, granting a temporary increase of fares, was not put, but another motion was passed, the intent of which, it was explained, would compel the company to immediately apply to the Manitoba Public Utilities Commission for relief, and a committee of five members of the council, together with the City Solicitor, was appointed to appear with the company's representatives before the commissioner and support the application for an interim order as outlined above, pending investigation of the application for permanent relief. The commissioner expressed pleasure at the fact that the city and the company had got together and had agreed as to the nature of the order, which he promulgated forthwith, authorizing the following fares temporarily, effective Nov. 1:—

Cash fare .....	5c
Tickets (white), good at all times .....	5 for 25c
Tickets (red), good from 6 to 8 a.m., 5 to 6.30 p.m., week days, all day Sundays, and at all times for soldiers in uniform .....	6 for 25c
Tickets (green), for children under 16 years of age—good at all times .....	7 for 25c
The old rates prior to Nov. 1 were:—	
Six unlimited tickets for 25c.	
Eight workmen's tickets for 25c.	
Ten children's tickets for 25c.	

In announcing the new fares, Traffic Superintendent Knox notified conductors as follows:—"All of the above tickets will be designated by a heavy black irregular saw-tooth impression across the face of the ticket. Until Sunday, Nov. 3, at midnight, outstanding tickets will be accepted for passage on our cars; after that time they will not be good for transportation. Passengers offering old tickets after above date should be requested to purchase new tickets and to present the old tickets for redemption at one of the company's offices. If passengers insist on using the old tickets you may permit them to do so, but 1c must be deposited by the passenger in fare box with the old ticket. This applies to all classes of old tickets."

A complete investigation of the company's affairs is now in progress before the Public Utilities Commission, in order to decide on what fares shall be authorized for the future.

The Winnipeg Board of Trade, which has some 2,000 members, has voted in favor of the company being allowed to increase its fares. The vote was taken by mail, owing to the influenza ban prohibiting meetings in the city. Some time ago the board's executive considered it a matter of policy to declare itself on the company's application for an increase, and in a questionnaire asked the opinions of the members. The result of the vote

was, 645 for an increase and 49 against. The city newspapers have supported the company's application.

## Dismantling of London and Lake Erie Ry. and Transportation Co's Line.

Failing in attempts to dispose of its electric railway from London to Port Stanley, Ont., as a going concern, either as a whole or in part, at prices fixed by the company, the line is being scrapped. It was finally closed for traffic Oct. 15, and the work of scrapping it was put in hand at once, the removal of the rails being commenced Oct. 21. The rails and other material, rolling stock, etc., are to be sold as early as possible.

The final offer for the purchase of the line was made by the City of London, Sept. 28, the price named being \$300,000. The company, E. B. Woods, President, is reported to have informed the mayor that more than that sum could be realized by scrapping the line. In connection with the scrapping of the line, a proposition came before the London Board of Control, Oct. 18, for the purchase of the bridge across the Thames, south of the city, in order that it might be turned into a general traffic bridge for the benefit of that section of the city. It was subsequently reported that the bridge would be suitable only for pedestrian traffic, and that its remodelling for vehicular traffic would make it nearly as expensive as the construction of a new bridge at Richmond St.

The city of London's interest in the line centered in the section from London to Lambeth, which it was thought at one time might be acquired. As the line is now being taken up, a proposition for establishing a bus line between the two points—one vehicle to carry passengers and another to carry freight—was endorsed by residents of Lambeth, Nov. 6. It is proposed to operate motor busses with a return fare of 25c.

Among the company's liabilities is a considerable sum due to the city of St. Thomas for taxes, rental, etc. The company's tracks connect with those of the St. Thomas St. Ry., which is owned by the city, and run over them for a short distance. \$2,400 was reported to have been paid over Nov. 6, leaving about \$5,000 due the city, which it demanded should be paid at once, or the track connection would be cut. G. B. Woods, President, had an interview with the city authorities Nov. 6, when he asked that the company's cars, with the rails and other materials, be allowed to run over the city's tracks to the steam railway yards for shipment. The city authorities refused to agree to the request, and it is reported that the connection was severed the same day.

**Winnipeg and Zone Fares.**—In addressing the Winnipeg City Council recently, A. W. McLimont, General Manager, Winnipeg Electric Ry., said:—"The company has no objection to putting into effect the zone system if the people want it. It is immaterial to us what system we have in operation so long as it will yield us sufficient revenue. My own opinion, however, is that the zone system would not be permitted by the people of Winnipeg. It would create a hardship for many of the poorer people living in the suburbs, and I do not think it will be at all popular. But we are willing to try it if you say so."

## Hull Electric Co's Snow Sweeper and Locomotive.

The Hull Electric Co. has added to its equipment a combined snow sweeper and locomotive, built by the Ottawa Car Manufacturing Co., with the following dimensions:—

Length over all as sweeper.....39 ft. 0 in.  
Length over all as locomotive.....24 ft. 0 in.  
Width over all.....8 ft. 8 in.  
Width of cab outside.....8 ft. 1 in.  
Length of cab outside.....12 ft. 4 in.  
Distance between bolster centers.....12 ft. 6 in.

The underframe is of steel construction, built as one unit. Side sills are 10 in. channel reinforced with a 14 x 1/2 in. plate. All center and cross sills are of 10 in. channel. The underframe is tied together with lateral bracing, and large gussets and corner plate. At the ends of the underframe there is a specially constructed frame, which carry the brooms and are made removable when used as a locomotive.

The cab is of wood construction with 16 steel panels, 4 windows on each side and 3 at each end. A sliding window on each side is provided for look out, and there

broom drive shaft, air compressor, motor resistance, air tanks, etc. This housing is made of sheet steel in 2 sections, so that it can be made shorter when the car is used as a locomotive.

The brooms are driven by a Westinghouse 101-B motor. The trucks are equipped with Westinghouse 101-B motors, 4 motors, double end equipment, with Westinghouse 402 controllers. The sweeper is equipped with Ohio Brass Co. pneumatic sanders. The lights are in one circuit of 5 lights, arranged at center of cab. The air brakes are Westinghouse, type S.M.E.; the trucks wheelbase is 4 3/4 ft.

The body is painted antique brown with gold numbers.

## Answers to Questions on Electric Railway Topics.

The following answers to questions sent to the American Electric Railway Association's question box, have been supplied by R. M. Reade, Superintendent, Quebec Ry., Light, Heat & Power Co., Quebec, Que.:—

Combined Snow Sweeper and Locomotive, Hull Electric Co.

is a large sliding door on one side. The roof is of the turtle back type, supported on steel carlines. The interior of body is finished in ash, natural finish.

The special machine is designed so that the motorman can operate all the apparatus used for lowering and raising the brooms, also the plough, without leaving his controller. The brooms and plough are lowered and raised by a chain device wound on to a cast iron drum, worked by a worm and gear on a 1 13 16 inch c.r. shaft, connected by miter gears to the winding machine shaft inside of cab operated by motorman.

The brooms are mounted on a heavy shaft and supported by 3 heavy malleable iron pedestals with bronze bearings. They are driven by heavy chain and sprocket drive from main driving shaft, which is directly connected to the motors by gear and pinion drive, having the same gear ratio as the truck motors. The broom drive shaft is of cold rolled steel and supported by 2 heavy cast iron pedestals with babbit bearings. A heavy sprocket is fitted and keyed on one end of shaft, from which power is transmitted to the broom shaft sprocket.

Motor housing is provided at each end, to enclose broom driving motors for

**Route Accounting Methods.**—What method should be pursued in allocating expenses and earnings, as between different lines and routes of the same system?

We have always allocated expenses on a mileage basis of the different lines and routes. We have a car hour basis, but it is not so satisfactory. Earnings for each line or route are kept separate.

**Track Maintenance Economies.**—In view of the necessity of economizing in the use of both labor and materials, what economies in track maintenance can be put into effect with the least inconvenience to the public and the least permanent injury to the company's property?

Due chiefly to the high cost, besides prices and delivery on rails not guaranteed by factories, we have been using for the past two or three years, a welding motor generator set. It has played a very important part in our railway track repairs, and by this means we are obtaining renewed life in the track on many parts of the system. After metal has been welded, the finished work is ground off to a smooth surface by means of the Atlas rail grinder. Built up welds are being made at cupped joints, at chipped intersecting flangeways and at other badly worn parts. In fact, many pieces of

track have been restored which otherwise would have required renewal at the time repair was made. Even if the percentage of unsuccessful repairs is large, the cost of them is so small that as a whole the work undoubtedly figures as an economy. All this work is being done at night between 12 midnight and 5 a.m., when cars have stopped running.

**Concrete vs. Wooden Ties.**—Taking into consideration the difficulty of securing, and the increased cost of, wooden ties, what is your opinion as to the desirability of substituting concrete ties therefore?

So far, we have had no difficulty in getting suitable ties, costing us 75c each. We have had no experience with concrete ties.

**Movable Snow Breaker.**—What is a good and cheap type of movable snow breaker for use on an interurban line, where they can be placed in the fields, only after the crop has been harvested, and must be removed in the spring?

We have used with good success rough wooden fences 12 ft. by 8 ft. high as a snow break. They are inexpensive, and easily put together by any track gang. Material required: 3 rough scantlings 3 x 4 in. x 8 ft., 8 rough boards 4 x 1 in. x 12 ft., 3 short scantlings 3 x 4 in. x 4 1/2 ft., 3 machine bolts 7 x 1 1/2 in. To make—the three long scantlings are laid parallel on the ground 6 ft. apart, and 7 of the rough boards are nailed at right angles to the scantlings, leaving 6 in. between each board; the 3 short scantlings are bolted to the center of the long scantlings acting as hinges; the 8 board is now nailed to the 3 short scantlings about a foot from the ends of same, enabling the fences to be folded and easily carried, when not in use.

**Repairs in Asphalt Pavement.**—What is the best method of temporarily patching holes in asphalt pavement between tracks? Can asphalt block or concrete be used for this purpose with good results?

All our pavement between tracks is either scoria, asphalt blocks or macadam. We have had no experience with asphalt pavement between tracks. I see no reason why asphalt blocks could not be used for patching asphalt between tracks.

**Women as Conductors.**—Can women conductors be effectively used in the smaller cities, say those having populations between 20,000 and 50,000? If not, why?

No experience. I see no reason whatever why women conductors could not make good in the smaller, as well as the larger, cities.

**Emergency Motormen.**—Will companies whose lines serve munitions plants or other centers of war or government activities, give their experience in the employment of employees of those plants in the operation of cars for single trips to the plants in the morning and away from the plants at night? Am informed that this method of making up the shortage in labor has proved successful in a number of instances.

Before the Ross rifle factory closed down 18 months ago, situated on the upper town, we ran single trip cars from the lower level of the city (two miles from the factory) in the morning, to the factory, and from the factory in the evening. The employees of the factory living on the lower level soon got to know of this convenience, patronizing these cars well, due to our announcing the fact in the press that they would be carried without transferring morning and evening.

**Sale of Tickets.**—Do you consider the sale of tickets—not at reduced rates, in connection with 6c, 7c or 8c fare, to be essential to the convenience of either the public or the company? What are the relative advantages or disadvantages?

Yes. An essential convenience to the public, because it enables them to always have the exact fare ready, while the company has the benefit of the credit thus obtained in its unredeemed ticket account.

**Traffic Right of Way.**—Do the traffic laws or ordinances of your state or city, give the right of way to vehicles or street

cars, proceeding in any particular direction, or upon any particular street? Do you not consider that some such provision of law would be desirable?

Our traffic law, 23-a, clause 12, reads: "All vehicles going east and west have the right of way over those vehicles going north and south." I consider that a general law should be in force making all tramway streets, main streets, giving the traffic on these main streets the right of way over all traffic coming along intersecting streets. This would cut down all classes of accidents to a minimum.

## The American Electric Railway Association's Action on the Electric Railway Industry's Condition.

A New York press dispatch of Nov. 4, which was widely published in both the United States and Canada, stated that the American Electric Railway Association, at a meeting attended by some 1,000 delegates, representing electric railway interests in all parts of America, had adopted a resolution recommending public ownership of all city and interurban electric railways. This was not correct. At the meeting referred to, which was held Nov. 1, J. D. Mortimer, President, Milwaukee Electric Railway & Light Co., moved a resolution reciting the industry's present condition, and its inability to continue service without substantial relief being afforded it, and recommending member companies to afford every facility to cities and municipalities for acquiring existing transportation facilities. On a further motion by Mr. Mortimer, the resolution was referred to the association's executive committee, for such action as it might see fit to take.

The following resolution was adopted unanimously at the same meeting:—"The whole structure of the franchise relationship between electric railways and the various communities has broken down under the strain of the war. The rapid increase in the cost of all material, the extraordinary demands of labor made necessary by the rise in the cost of living, the alarming decrease in the purchasing power of the nickel, have brought the electric railways of this country face to face with bankruptcy. Practically every other industry except public utilities, whose rates are regulated by law, has been able readily to adjust its methods of doing business to meet the war demands, and the radical increases in the cost of operations and of manufacture have been promptly reflected in the selling price, and so passed on to the consumer. In all other departments of our commercial and industrial life, where the economic laws of supply and demand have been unhampered and allowed free play, the inevitable increase in the cost of production has been taken care of in the perfectly normal way of increased cost to the consumer. It is only in those industries where the public has attempted to fix a just and fair price for service rendered, and where the artificial standard has been substituted for the natural one, that we find this complete breakdown under war conditions. Industry generally was never so prosperous, notwithstanding the increase in the cost of labor and material. The public utilities, and especially the electric railways, present practically the only exception to this rule of prosperity. They, on the contrary, are steadily being destroyed by the war.

"A tabulation of 388 electric railways, representing over 63% of the electric

mileage of the United States, shows a falling off in income of 82% for the first six months of 1918, compared with the corresponding period of last year. Many of the companies are facing an actual operating deficit, in spite of the increase in gross receipts. The scale of wages established by the National War Labor Board in cases already decided, when applied to the industry generally, will add over \$100,000,000 to its already greatly increased operating expenses. As a consequence of the rapidly mounting costs of operation and the steadily declining net income, the financial standing of the electric railways has been seriously affected, and it is no longer possible to attract new capital for the efficient operation of the properties in the interest of the public.

"These facts lead inevitably to the conclusion that the present relationship between the companies and the public, as evidenced by existing franchises with fixed rates of fare, is economically unsound; that the present system of regulating fares by franchises or commissions is admittedly not sufficiently responsive to violent and radical changes in operating conditions. Under the present system, before the company can justify an increase of its fare, it must first show that for a longer or shorter period it has suffered loss under the existing fare, which loss cannot be compensated for by the new rate. In any other business, the prudent manager is able to provide against increases in cost by promptly advancing his selling price. The electric railway must stagger along under the 5c fare for months until its credit is destroyed, its service impaired, its equipment deteriorated, and it has become obvious to the community that it is on the brink of destruction, before its case has been sufficiently made out to justify an increase in its rate.

"The declaration of war found the electric railways thoroughly unprepared for the problems thrust upon them. Without in any way lessening our efforts to win the war by supplying this essential service to the public, it would seem to be the part of wisdom for us to take up for serious consideration the problems of peace. Of all the problems of re-adjustment which this nation will have to meet and solve after the war, none will be more serious or more difficult than that of the electric railway industry. In the light of our experience, as emphasized by war conditions, it is manifest that to insure the efficient operation of the electric railways of the country after the war, there must be a recasting of the entire basis of the relationship existing between the electric railways and the communities they serve. In many cases, electric railway franchises, which had come to be

considered as valuable assets, in the light of recent experience have been proved to be liabilities. Already there is a growing recognition of this fact in different parts of the country, as evidenced by the operation at cost plans adopted recently in Boston, Chicago, and Cincinnati. In the past, the sole interest of the community has been thought to be in the service rendered, but with a broader conception of the underlying problems involved, there is a growing tendency to recognize a community of interest in the problems of profit and loss, as having a direct and immediate bearing upon the rate of fare.

"Now, therefore, be it resolved by the American Electric Railway Association: That it is the deliberate judgment of this association, that, in the light of the experience of the industry during the war, the entire subject of the relationship between electric railway companies and the public should have, now and during the reconstruction period following the war, the most earnest consideration of the representatives of both the public and the companies; that among other things, a radical revision of electric railway local franchises should be made, if the industry is to continue to render efficient service to the public, and that a committee be appointed by the President of the association, whose duty it shall be to make a study of reconstruction problems, particularly those relating to local franchises, and report their recommendations at an early date."

**Commercial Development of Quebec.**—R. M. Reade, Superintendent, City and Quebec County Division, Quebec Ry., Light & Power Co., wrote a local paper recently on this subject, advocating the formation of a foreign trade committee of the Quebec Board of Trade, for the purpose of increasing the import and export trade of the port. Mr. Reade points out how the great ports of Europe and in other parts of the world have been built up by the extension of foreign trade. With the number of railways centering on Quebec, and the opening of the Quebec Bridge, Mr. Reade considers it time for Quebec people to awake to the realization of their opportunities and to take advantage of the natural and other advantages of the port, and of the great trade opportunities that will be within reach of those who seek for them on the coming of peace.

**Toronto Ry. Wage Conciliation Board.**—On the application of the Toronto Street Railway Employees Union, a board of conciliation is to enquire into the men's demand for a revision of the wage scale, to bring the rate of pay to 43c an hour for the first 3 months, 46c for the next 9 months, and 48c for the second year. The company opposed the application for a board on the ground that a wage agreement was already in force, and had a considerable time to run, but has now nominated F. H. Phippen, K.C., ex-General Counsel, Canadian Northern Ry., to represent it on the board. H. W. Harper will represent the men, and County Judge Barron, of Stratford, Ont., will be chairman.

The New Brunswick Power Co. has applied to the New Brunswick Public Utilities Commission for authority to abandon its street car service along Rodney wharf, St. John, and to remove the trestle. The St. John City Council has made application for an order directing the continuation of the service. The commission decided to hear both applications together at an early date.

## Mainly About Electric Railway People.

Wilson Phillips, formerly Superintendent, Winnipeg Electric Ry., has removed to Toronto.

E. Patterson has been appointed Roadmaster, Montreal & Southern Counties Ry., vice W. H. Maxwell, resigned.

City Commissioner Thornton, Regina, Sask., who acted as Chairman of the City Committee in charge of the Victory Loan, was reported to be suffering from influenza recently.

Herbert C. Howard, who was appointed Publicity Agent, Winnipeg Electric Ry., in February, and who resigned in May, on joining the Vancouver Daily Sun's staff, has returned to W.E.R. service as Publicity Agent, vice F. H. Williams, resigned.

J. B. Leitch, heretofore chief clerk to General Superintendent, Winnipeg Electric Ry., Winnipeg, has been appointed Assistant to General Superintendent. He has been in the company's service for 9 years, 6 of which were spent as chief investigator in the accident and claims department.

## Electric Railway Notes.

The Calgary Municipal Ry. put in operation Nov. 6, an augmented service during the rush hours.

A motion to commit R. J. Fleming, General Manager, Toronto Ry., to jail, for contempt of court, in not conforming to the court's order to supply the city with certain information as to the company's equipment, was dismissed at Toronto, Nov. 6, after a conference between the parties, when it was arranged that additional information be supplied.

The Hamilton & Dundas Ry. service is being checked by the Dundas, Ont., Town Council, on account of complaints of inadequate service. The council proposes, in the event of the complaints being found to be reasonable, to apply to the Ontario Railway and Municipal Board for an order setting out the number of cars which should be operated for the convenience of passengers at certain hours.

In consequence of the influenza epidemic, the operation of electric railways throughout Canada was considerably interfered with from the middle of October to the end of November. In Saskatchewan and Alberta, in particular, the service appears to have suffered most, not only on account of some cutting down of the service, but owing to the fact that the provincial boards of health in those provinces made the wearing of masks by all passengers compulsory.

The Ontario Appeal Court reserved judgment, Nov. 6, in the matter of the rights of certain bondholders in the Grand Valley Ry. Co. This is an issue to decide the rights of certain different classes of bondholders to rank on the purchase money of the road, which had been paid into court. At the trial it was decided that the holders of the 1902 bonds, who had not exchanged, were entitled to their money, and this has been appealed by the other bondholders, who claim to share.

Suits entered by L. Dubois with respect to the Montreal Tramways Co.'s new franchise were finally disposed of by Justice Dulos, Oct. 31. The injunction proceedings were disposed of prior to the hearing of the fares question by the Quebec Public Utilities Commission, but the

last action was one to quash the contract. This was met by the company entering an inscription of law, which was maintained by the judge, and the action was dismissed with costs, Dubois being declared to have no status in the case.

## Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and subsidiary companies.—

	Sept. 1918	Sept. 1917	Sept. 30, 1918	Sept. 30, 1917
Gross	\$575,476	\$457,709	\$1,533,783	\$1,350,512
Expenses	444,928	381,591	1,295,634	1,157,813
Net	130,548	76,118	238,149	192,699

Cape Breton Electric Company.—

	Sept. 1918	Sept. 1917	12 months to Sept. 30, 1918	12 months to Sept. 30, 1917
Gross	\$46,026.98	\$39,805.36	\$501,334.17	\$443,695.05
Exp.	35,161.83	25,628.29	365,570.16	274,100.50
Net	10,865.15	14,177.07	135,764.01	169,595.54

Levis Tramways Co.—Application will be made to the Quebec Legislature to incorporate a company with this title with the powers generally granted to a railway company, and with power to acquire the Levis County Ry.'s property, rights and franchises. The applicants are Senator R. Dandurand, S. H. Ewing, J. A. Ewing, Montreal; E. A. MacNutt, Westmount, Que.; J. C. Blouin, Levis, Que.

London Street Railway.—

	Oct. 1918	Oct. 1917
Gross	29,848.73	\$34,206.31
Expenses	28,075.09	27,624.76
Net	1,773.64	6,581.55

New Brunswick Power Co.—Under acts passed by the New Brunswick Legislature relative to the taking over of the St. John Ry. Co. by the New Brunswick Power Co., the holders of St. J. Ry. bonds, maturing 1925 and 1827, can surrender them and receive therefor Dominion War Loan bonds, par for par, with adjustment of interest. The N.B.P. Co. has deposited with the Secretary-Treasurer of New Brunswick, Dominion War Loan bonds maturing 1925, of a face value equal to the St. J. Ry. outstanding bonds, together with a cash deposit for the equalization of the interest. The Montreal Trust Co. and the Royal Bank of Canada, Fredericton, N.B., are receiving the St. J. Ry. bonds for exchange.

Toronto Ry., Toronto & York Radial Ry. and allied companies.—

	Sept. 1918	Sept. 1917	9 months to Sept. 30, 1918	9 months to Sept. 30, 1917

Gross	\$285,670	\$267,170	\$2,674,137	\$2,431,794
Expenses	207,477	203,744	2,028,450	1,861,667
Net	78,193	63,426	645,687	570,127

The surplus, after deducting fixed charges, for September is \$22,254.58.

New Brunswick Power Co.—J. A. Sullivan, of Boston, Mass., legal adviser of the city council of St. John, N.B., in connection with street railway matters, is reported to have stated, Nov. 10, that after the thorough investigation of the company's status, then going on, had been completed an application would be made to the arbitrators for dates of hearing. He was working with a view to have everything in shape to have the necessary legislation ready for consideration at the next session of the New Brunswick Legislature.

## On the Way to France.

By Ralph M. Reade,

Superintendent City and Quebec Railway Division, Quebec Railway, Light & Power Company.

(All rights reserved.)

1. "Cheer up, my friends!" said Uncle Sam,  
"I've just received your telegram—  
A million Yanks are now in France  
To lead the Huns a merry dance:  
Ten million strong are coming 'cross the sea,  
To do the right and keep the jubilee—  
Then, here's to our uncle and here's to his gallant sons;  
They will teach that right is might with Yankee guns!"

Chorus

"Steaming, steaming, over the ocean blue,  
Chasing the Kaiser's submarines  
And sinking quite a few:  
Steaming, steaming, taking a sporting chance,  
Sinking the Huns with Yankee guns—  
On the way to France.

2. "Our soldier boys across the sea,  
Will fight the fight for liberty,  
While you and I must do our share  
With plow and hoe to keep them there;  
In Berlin town upon the River Spree,  
Our flag shall wave, the symbol of the free—  
Then, here's to our uncle and here's to his gallant sons;  
They will teach that right is might with Yankee guns."

London St. Ry. Difficulties.—For some time past complaints as to the service given by the London St. Ry. have been considered by committees of the London, Ont., City Council, and have been discussed with C. B. King, Manager, and other officials of the company. Among other matters about which there is a difference of opinion are increased fares, and fines for alleged infractions of a city bylaw affecting time and speed of cars. The fare question was under consideration during the summer, and on the city council failing to come to terms, the company reduced its car schedule to endeavor to meet the increasing cost of operation by effecting a reduction in running expenses. The reduced schedule was put into effect July 1, and this was met by the council calling for the continuance of the old schedule, and passing a bylaw fixing the speed of cars, etc. The penalty fixed for breach of this bylaw is \$10 a day. A bill for \$210, for alleged violations during October, has been sent to the company. It is said that the whole matter will be taken up by the city council before the Ontario Railway and Municipal Board, a motion to that effect having been given notice of, for consideration by the council's no. 1 committee.

Influenza Among Winnipeg Electric Railway Employees.—Winnipeg, in common with other cities, has suffered severely from Spanish influenza, and the Winnipeg Electric Ry.'s staff has not escaped. As soon as the influenza reached the city, the company's medical officer began inoculating the employees, and while this had a very beneficial effect, yet at one time nearly 50% of the office staff were suffering. Early in November, A. W. McLimont, General Manager, established a relief committee, upon which each of the 16 departments in the whole organization was represented. This committee investigates each case in the home of the employee, and then reports back to Mr. McLimont, with recommendations as to the nature of relief which should be given. The various cases receive Mr. McLimont's personal consideration, and relief, either financial or otherwise, was immediately extended.

## Notes on Electric Railway Service at Cost.

That the condition of electric railway companies is decidedly precarious, and that immediate relief is necessary to save the roads from utter collapse, is reflected in the action of the President of the United States, who issued a statement recently in which he laid particular emphasis upon the situation that confronts the companies all over the country. The special purpose of his review of the situation was to impress upon the governing bodies in all municipalities where electric railway service is provided, the necessity for treating the roads liberally, and with the consideration that their condition justifies. He said in part that the roads are confronted with unusual burdens and that they should be permitted to earn sufficient revenue to pay operating expenses and show a fair return upon invested capital. This recommendation comes at a most opportune time, for with very few exceptions electric railways are not earning enough to pay their constantly increasing cost of operation. More than 90% of the electric railways in the United States are financially shaky, while many have collapsed under the strain. The same condition exists in Canada, for there are very few lines anywhere in the Dominion that are securing enough revenue to meet the cost of operation. So many factors have combined to make this condition possible that the wonder is that many of the roads are able to operate at all, for while expenses have increased in some instances 400%, and while nearly everything has about doubled in cost in the past four years, yet the railways in most instances are compelled to operate for the same rate of fare that prevailed when expenses were but a small fraction of what they are now.

The wages of employees are being constantly advanced to help to meet the rising cost of living; the price of equipment is continually soaring to new high levels; requests for more and better service, made necessary in great part by war activities, are making demands upon the companies that are taxing their every resource, improvements are insisted upon, and yet the companies find that they cannot secure additional revenue to meet these demands. Increased fares are denied them, so that their revenue is constantly below the cost of operation, and when this condition arrives the credit of the companies is destroyed, for investors fight shy of an enterprise that is not making enough to pay expenses. In view of this condition, President Wilson's remarks are most timely, and should be carefully considered by those who, while expecting a continuation of street railway service, are loth to admit that the companies are entitled to more revenue to meet the conditions that everyone knows to exist.

The main trouble with the electric railways is that they are selling 1918 service on the basis of 1898 costs. Investigators differ slightly as to the comparative cost of running an electric railway today and 20 years ago, but there is little doubt that in the past four or five years operating costs have increased in the neighborhood of 100%, with the prospect of still further increases. Many of those who use electric cars today can recall the first service of its kind that was installed in the various cities. Horse cars, with their short hauls, cheap equipment and limited service, were the forerunners of our present transportation facilities.

When electric power was substituted for the horse driven vehicles, it was believed that unlimited service could be provided almost anywhere, at almost any time, for the same rate of fare that had prevailed during the days of the horse cars. For a time this theory seemed to be practical; but, with the installation of electric power, the demands made upon the companies by cities in which they operated should have indicated that it would only be a question of time before there would be a limit to the service that could be given at the old fare.

At first, electric cars were small, and light, and covered comparatively short distances, but an ever increasing population drove homeseekers farther from the business centers, and the electric railway companies, in order to keep pace with this growth, extended their tracks, purchased new equipment and added constantly to their working forces. In time the car designers had to make their product larger and larger. Lines were continually lengthened, until interurban companies joined their tracks to city property; gradually old equipment became obsolete and had to be replaced with heavier rails, more expensive road beds, costly poles carrying more and larger feed wires, great power houses and substations became necessities, and within these were installed heavy modern electrical machinery. So quickly did these changes come about that equipment had to be junked before it had outlived its usefulness, and here entered the question of obsolescence, which is such an important factor in modern electric railway operation. One item alone will suffice to show how operating conditions have changed: Cars of the type used when horses were the motive power cost about \$1,000; the modern electric cars cost anywhere from \$15,000 to \$18,000; other items of equipment have been similarly affected, and yet, in the face of the tremendous increase in the cost of operation, the rate of fare has remained practically where it was when street railway transportation was first introduced. When we add to these conditions the farther complication caused by labor shortage, and the inability to procure, at any price, some types of necessary equipment, it is not difficult to realize that the tramway companies are confronted by the most critical period in the history of the industry.

The "service at cost" plan of electric railway operation which is now being advocated in Ontario is, in reality, a co-operative plan under which electric railways must be conducted at the maximum of efficiency and at the minimum of cost. There are co-operative banks and co-operative stores, and it is proposed to operate the electric railways on the same plan. In any co-operative enterprise, the main idea is to do the business without profit and to maintain the lowest possible selling price. As a co-operative bank loans money on the basis of actual cost of doing business, and as the co-operative store sells its commodities at actual cost, so a co-operative street railway plan would provide for the selling of transportation at exactly what it costs to give the service. Co-operative street railway operation has been in force in Cleveland, Ohio, for eight years, and it has given the utmost satisfaction to everyone. The same idea has been applied to the electric railways in Montreal, Boston, Cincinnati, Kansas City, Des Moines, Chicago, Dallas,

Toledo and the entire State of Massachusetts, while a number of other cities, as well as the State of Rhode Island, are about ready to adopt the plan. The complete success of co-operative or service at cost plan, wherever it has been tried, encourages the growing belief that it is just what Ontario needs, because it offers a prompt improvement of service, a more complete public control over the management of the railways, the immediate extension of service where needed, and all at a rate of fare just sufficient to pay the actual cost of good service. One of the most desirable features of the service at cost plan is the fact that it invariably enlists the co-operation of the public and re-establishes confidence in the operation of the railway.

### Electric Railway Projects, Construction, Betterments, Etc.

**Levis County Ry.**—We are officially advised that work on the reconstruction of the company's tracks in Levis, Que., was suspended Nov. 15 on account of winter conditions. It is expected to restart the work next May. (Sept., pg. 403.)

**Quebec Ry., Light & Power Co.**—Considerable damage was done to the Montmorency Division's track by a high tide in the St. Lawrence River, Nov. 19. Damage was done to some extent all along the line, and between Limoilu and Station Monument, the north track was lifted by the tide and landed in the ditch, while the south track was lifted and deposited approximately in the place of the north track.

A press report stated, Nov. 21, that instructions had been given to the City Solicitor of Quebec to take proceedings against the company to compel it to construct additional tracks in the Limoilu district. (Sept., pg. 403.)

Since the foregoing was written we have been officially advised that, under an agreement with the Quebec City Council in 1916, the company agreed, among other things, to extend the line on Beauport Rd. to the end of the city limits, a little over a mile, the work to be completed by Dec. 31, 1917. Owing to the high cost of labor and materials, the work was not started. The district through which the extension would run is not built up, and for at least two years the extension would not be a paying one. The position taken by the company is that the city council should not press for the carrying out of the work until such time as the cost of material, labor, etc., is reduced.

**Toronto & York Radial Ry.**—We are officially advised that plans are being prepared for a car barn on the Kingston Road, Toronto, for the Scarborough Division. It was expected to have everything ready to start work on the building of the barn by Nov. 30. (Nov., pg. 505.)

**Chatham, Wallaceburg & Lake Erie Ry. Traffic.**—Owing to a cave in at its power house smoke stack at Chatham, Ont., Oct. 29, there was a shortage of power and freight traffic was reported to have been suspended for several days. Power to run the passenger cars was temporarily obtained from the Chatham Gas Co., and the local Hydro-Electric Committee. (Feb., pg. 77.)

# Marine Department

## Steel Cargo Building for Dominion Governments.

**Launchings of Vessels.**—The first of the vessels to be built under the Dominion Government's programme, one of 4,300 tons, was launched by Canadian Vickers, Ltd., at Montreal, Nov. 23, and the second one, of 8,100 tons, will be launched at the same yard Dec. 3. Their names are Canadian Voyageur and Canadian Pioneer, respectively.

**Operation of Vessels.**—The Minister of Marine has announced that all the vessels ordered, and to be ordered, by his department will be operated under the control of D. B. Hanna, President, Canadian Northern Ry., whose jurisdiction has now been extended over the Canadian Government Rys. The Canadian National Steamships, Ltd., is about to be incorporated, under the Dominion Companies Act, and all its stock will be held on behalf of the Dominion Government. It will be a sub-

Collingwood Shipbuilding Co., Kingston, Ont. ....	1	3,750	3,750
J. Coughlan & Sons, Ltd., Vancouver, B.C. ....	4	8,100	32,400
Davie Shipbuilding & Repairing Co., Lauzon, Que. ....	2	5,100	10,200
Halifax Shipyards, Ltd., Halifax, N.S. ....	2	8,100	16,200
Port Arthur Shipbuilding Co., Port Arthur, Ont. ....	4	3,400	13,600
Port Arthur Shipbuilding Co. ....	2	4,300	8,600
Tidewater Shipbuilders, Ltd., Three Rivers, Que. ....	4	5,100	20,400
Victoria Machinery Depot, Victoria, B.C. ....	2	8,100	16,200
Wallace Shipyards, Ltd., Vancouver, B.C. ....	2	4,300	8,600
Wallace Shipyards, Ltd. ....	2	5,100	10,200
Total .....	37		212,350

The 3,400 and 3,750 ton vessels are of the lake type, with single deck, poop,

to provide vessels suitable for certain trade, it was decided to add an additional deck, and make the vessels of the 3-deck type. For the additional deck an extra price of \$2.50 a ton was fixed.

**Prices for Steamships.**—The Toronto Globe attacked the Minister of Marine recently, for having given orders to J. Coughlan & Sons, of Vancouver, for 4 steel cargo, twin deck steamships of 8,100 tons d.w., at \$198 a ton, and to the Halifax Shipyards, Ltd., Halifax, N.S., for two 8,100-ton vessels at \$197 a ton. The Globe stated that the best previous price paid was reported to have been \$165 a ton, that the placing of contracts at nearly \$200 a ton was gross extravagance and that when the vessels were completed they would not be worth much more than half their cost. The Globe's information as to previous prices was incorrect, the

Steel Cargo Steamship, War Camp, 8,800 tons d.w., for British Government, built by J. Coughlan & Sons, Vancouver.

subsidiary of the Canadian National Railways, which, it is said, will be the name under which both the Canadian Northern Ry. and the Canadian Government Rys. will be operated, when the necessary legislation has been obtained. Separate subsidiary companies will also be incorporated for the ownership of each steamship.

R. C. Vaughan, Assistant to President, C.N.R. and C.G.R., has general charge of the arrangements for the operation, etc., of the steamships, one of which was launched by Canadian Vickers, Ltd., at Montreal, Oct. 23, and the second of which will be launched at the same yard on Dec. 3. It is probable that the appointment of a separate official to take direct charge of the operating of the steamships will be made in the near future. H. Milburne, formerly Wharf Superintendent, Canadian Northern Steamships, Ltd., Montreal, and latterly in charge of the Canadian Red Cross overseas shipments at Montreal, has been appointed Superintendent there for the Canadian National Steamships, Ltd.

**Orders for Steamships.**—We are officially advised that the following orders had been placed by the Dominion Department of Marine, up to Nov. 22:—

	No.	Deadweight tons each	Total d.w. tons
Canadian Vickers, Ltd., Montreal .....	2	4,300	8,600
Canadian Vickers, Ltd., Collingwood Shipbuilding Co., Collingwood, Ont. ....	6	8,100	48,600
	4	3,750	15,000

bridge and forecastle; the 4,300 and 5,100 ton vessels are of the single deck type, with poop, bridge and forecastle; and the 8,100 ton vessels are of the two deck type, with poop, bridge and forecastle.

Previous lists published mentioned 2 steamships of 4,300 tons, which we were advised on Aug. 15 had been ordered from the British American Shipbuilding Co., Welland, Ont. This contract is not being gone on with, and it is said that the company may be given a contract for smaller vessels, on account of the difficulty of taking the larger vessels through the Welland and St. Lawrence Canals in two sections to tide water.

An Ottawa press dispatch of Nov. 22 stated that an order in council had been passed authorizing the Minister of Marine to enter into a contract with Halifax Shipyards, Ltd., for the construction of 2 steel cargo steamships, 3-deck type, of approximately 10,500 tons dead weight each, at \$197.50 a ton. The dispatch quoted the order as stating that the company offered last May to build the vessels at \$195 a ton, but that the increased cost of labor and materials had caused an advance of \$2.50 a ton in the price.

Since the above was put in type we have been officially advised that an order in council has been passed as stated. When the first negotiations between the Marine Department and the company took place, and a promise was given of an order for several vessels, the price agreed on was \$195 a ton. As a result of further consideration given the matter, in order

"best," or highest previous price, was not \$165 a ton. That price was paid for two vessels, ordered from J. Coughlan & Sons, by the Imperial Munitions Board, for the British Government, in the spring of 1917, since when both labor and materials have greatly increased. Subsequent contracts were placed by the board at much higher rates, and J. Coughlan & Sons were given orders by the board for 4 more vessels at \$200 a ton. While the prices for all the Marine Department's contracts have not been made public, it is stated that the first two contracts given Canadian Vickers, Limited, were at \$207 a ton for a 4,300-ton steamship, and at \$180 a ton for an 8,100-ton steamship. The Collingwood Shipbuilding Co. is to get \$205 a ton for two 3,750-ton steamships. The Wallace Shipyards, Ltd., Vancouver, has contracts from the department for four vessels of 5,100 tons each at \$210 a ton.

According to figures submitted officially some time ago, it appears that the Imperial Munitions Board ordered 43 steel steamships, aggregating 211,300 tons, for about \$40,000,000, or an average of \$191.42 a ton. These wooden steamships are, of course, inferior in every way to the steel steamships being built for the Marine Department, and it is said that the steel steamships ordered by the Imperial Munitions Board are not of the same standard as those being ordered by the Marine Department. It must also be borne in mind that the Imperial Munitions Board orders were placed early in the war and that conditions have changed

very much since then.

Canadian Railway and Marine World believes that the contracts placed by the Marine Department recently are at the lowest prices at which shipbuilders will undertake the work. Apparently the To-

ernment's decision to engage in shipbuilding, private firms for which ships were being built in Canadian yards were paying prices for plates ranging from \$100 to \$180 a ton, and several small lots had to be purchased for upwards of \$200 a

tion in Sydney of a plate mill and the purchase therefrom of 250,000 tons of ship material at a basic price of \$83 a ton. The contract with the Steel Corporation provides that the price of plates will be reduced proportionate with any reduction that may hereafter occur in the cost of producing steel ingots. This cost will be determined at the end of every six months period by auditors selected by the Government for that purpose. While the fixed price seems high, it is from 50 to 100%—and more in many cases—lower than the prices then obtaining in the open market. It was necessary to provide assured supplies of plates for Canadian shipyards and other Canadian industries."

**Halifax Shipyards, Ltd., Halifax, N.S.**—Arrangements are reported to have been made with the city council for the temporary use of the city market building, as a moulding loft, in connection with the preparations for building the 8,100 ton steamships for the Dominion Government. It is expected that the keel of the first vessel will be laid during December.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—Having completed its orders for the British Government, received through the Imperial Munitions Board, has commenced work on 2 steel steamships of 3,400 d.w. tons for the Dominion Government.

**What is Low Water Mark?**—The Dominion Iron & Wrecking Co.'s appeal from the judgment against it on a contract for the removal of a part of the wrecked s.s. Bavarian, which has been lying at Indian Cove, Que., for several years, was dismissed by the Supreme Court, Nov. 26. The contract called for the placing of the wreck "high and dry

Steel cargo steamship, War Horus, for British Government, built by Port Arthur Shipbuilding Co., Port Arthur, Ont., leaving the head of the lakes for Montreal.

ronto Globe thinks it would be better for no orders to be placed now. But there is urgent need of shipping, and the Dominion Government would be derelict in its duty if it did not continue to place orders to keep all the steel shipbuilding plants in Canada going to their fullest capacity. Foreign governments and private owners are anxious to place orders in Canada at higher prices than the Dominion Government is paying, and as a matter of fact Canadian shipbuilders would be better off if they were allowed to take those orders instead of being confined to Dominion Government work. We have reason to believe that the orders given for the French Government recently, for building 70 wooden steamships in Canada, full particulars of which were published in Canadian Railway and Marine World for November, are at considerably higher prices than the Marine Department is paying for infinitely superior steel vessels.

The Toronto Globe also refers to the price of steel ship plates contracted for by the Dominion Government. The contract which the government has with the Dominion Steel Corporation, Sydney, N. S., for steel ship plates for 5 years is at a base price \$4.15, on a sliding scale; that is to say, the price was fixed on the price of steel ingots at the time the contract was signed, and in no event can it be higher than \$4.25. As the price of steel ingots declines, so will the price of the ships plates for the government during the five years of the contract. Every 6 months the government will send auditors to the Dominion Steel Corporation, to ascertain the costs. It is therefore self evident that the price of \$4.15 is only a base price and that as the cost of steel ingots declines so will the cost of the plates to the Dominion Government decline.

In connection with this matter, the Minister of Marine stated in an interview recently as follows:—"In January last and for some months previous to the gov-

ton. Through the courtesy of the U.S. Government, the department was enabled to obtain an assurance that sufficient plates to meet the requirements up to July or August next would be available from U.S. sources, at the rate fixed by

Launching of steel cargo steamship War Noble, for British Government, by J. Coughlan & Sons, Vancouver.

the U.S. Government, viz., \$65 a ton. It was in these circumstances and in pursuance of a policy to make Canada self contained in the matter of shipbuilding that the arrangement was concluded with the Dominion Steel Corporation for the erec-

at low water mark," and the work was to be completed by June 25. The company claimed that that meant low water mark at the time the contract was concluded, but, it was held that it meant ordinary low water mark.

# Cargo Steamship Building in Canada for British Government.

**Launchings of Steamships.**—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to Nov. 15, giving in each case the date of the launching, the name

Steel cargo steamship War Fiend, 3,400 tons deadweight, for British Government, just prior to launching by Midland Shipbuilding Co., Midland, Ont.

of the steamship, the name of the builder and the deadweight tonnage:—

Aggregate deadweight tonnage of 26 steel and 15 wooden steamships launched, 264,100 tons.

**Port Arthur Shipbuilding Co., Port Arthur, Ont.**—With the sailing of the s.s. War Karma from Port Arthur, Nov. 24, for delivery to the Imperial Munitions Board, at Montreal, this company has completed its orders for building steel steamships for the British Government. In all, seven vessels have been built for British service, 6 of 3,400 d.w. tons under direct order from the Imperial Munitions

Board, and one of 4,300 d.w. tons which was under construction for foreign interests and taken over by the board.

Quinlan & Robertson, Ltd., Quebec, Que.—The s.s. War Seneca, one of the steamships built by this firm for the British Government, had her trial trip in the St. Lawrence River, Nov. 23, but had only gone a short distance when a break occur-

### Steamships Required for Merchant Service.

Ottawa press dispatch, Nov. 15:—In a discussion with the government's reconstruction committee today, representatives of the leading steamship companies of Canada, of the Montreal, Quebec, St.

This year there was only one boat to South Africa, and the trans-Pacific service has been entirely cut out. The steamship companies recognize the prior calls of the nations overseas for carrying food, and the necessity of having some sort of regulation to see that those needs are filled, but they asked that the ships should go back into private company management as soon as possible. They would be willing to observe all regulations as to cargoes and voyages. The government was asked to request the British Admiralty to send to Canada enough ships to meet her demands.

### Wotan-Montreal Collision.

An enquiry was held at Montreal recently into the cause of the collision between the s.s. Wotan and the barge Montreal in tow of the tug Weaver, in the Soulanges Canal, July 16. The s.s. David Mills was cited as a contributory cause. The court consisted of Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and C. Lapierre as nautical assessors.

The judgment delivered, Nov. 25, declared that the court could come to no other conclusion than that the s.s. Wotan was placed in a peculiar situation by the actions of the tug Weaver and the barge Montreal, as well as the s.s. David Mills, and therefore exonerated the s.s. Wotan from all blame, and found that the other vessels named waived aside all rules of prudence in attempting such evolutions as they did, while the Wotan, which had the right of way, was close at hand, in such a narrow channel. The certificate of Joseph Seguin, master of the tug Weaver, was suspended for one month

Steel cargo steamship Karma, built by Port Arthur Shipbuilding Co., for British Government.

red in her machinery and she was compelled to put back.

### Lock Gate Accident on Welland Canal.

The Montreal Transportation Co.'s s.s. A. McVittie, while upbound, light, Nov. 15, struck the tow path head gate of lock 12, and carried out both upper gates. The heel path lower gate was damaged somewhat and unstepped, but was not carried out into the level below. It was, however, necessary to replace it was a spare gate. The banks on both sides of the canal at the head of lock 11, were badly washed out by the water released, the estimate of the damage done being \$7,500. The gates were stepped and navigation resumed after a day of about 22 hours. The same three gates were carried out by the s.s. Pawnee, in August, and the filling at the head of lock 11 was practically completed when it was washed out again. The vessel, A. McVittie, was undamaged, and the master and mate seem unable to explain the reason for the accident. The master stated that he gave the signal to reverse, and the engineer stated that he reversed, but the master is convinced that the vessel did not have the usual vibration at the reverse. The mooring wire was making sparks in the compressor, and witnesses agree that the vessel was moving at a moderate speed. We are indebted to L. D. Hara, Superintending Engineer, Welland Canal, for the details of the accident.

Capt. J. D. S. Phillips, master of the s.s. Makura, which has been in the mail service between Canada and Australasia for some time, is reported to have been appointed Assistant Marine Superintendent, Union Steamship Co. of New Zealand, at Sydney, N.S.W.

The Right Hon. Andrew Bonar Law stated in the British House of Commons recently that the Government did not contemplate the nationalization of British shipbuilding.

John and Halifax boards of trade, and of the Canadian Manufacturers' Association urged on the government the necessity of getting merchant ships released from carrying war supplies of various kinds, in order to renew the trade with South Africa, Australia, New Zealand, the West Indies, China, Japan, Manila and South American ports. Goods ordered for these points are already awaiting shipment.

Wooden cargo steamship War Toronto, built by Toronto Shipbuilding Co., for British Government.

and a brisk traffic would open up immediately if the ships were available. Only about one-sixth of the trade which Canada formerly did has been transacted with Australia and South Africa because of the lack of tonnage in the last two years. The shippers insisted on the necessity of shipping from Canadian ports, saying that the U.S. war trade regulations caused delays because of the necessity of furnishing full information.

from the date of its receipt by the court, for lack of judgment in obeying the orders of the master of the barge Montreal, of which he was the servant. The masters of the barge Montreal and of the s.s. David Mills, having no certificates which could be dealt with by the court, were severely reprimanded for their recklessness in attempting to pass a vessel when she had precedence, and for violating the rules of the road.

## General Shipbuilding Notes Throughout Canada.

**Acadia Shipbuilding Co.,** Saulnierville, N.S., expected to launch the schooner *Merriam H.* during November. The dimensions are: length 157 ft. overall, 126 ft. keel, 33.4 ft. beam and 12½ ft. depth; tonnage 422 gross, 359 net. She has been sold to A. S. Randell & Co., St. John's, Nfld.

**The Anglo-Newfoundland Development Co.** launched the schooner *Bella Scott* at Botwood, Nfld., towards the end of October. A sister vessel is under construction and is expected to be launched shortly. The report of the launching of the *Bella Scott*, in a St. John's paper, says:—"The whole proceedings were run through without a hitch. The vessel moved slowly, but persistently and steadily, for about an hour, finally taking her plunge into the bay."

**Canadian Car & Foundry Co.,** Fort William, Ont.—The twelfth, and last, of the mine sweepers which this company has been building for the French Government, left Fort William, Nov. 14, for the seaboard.

**Dominion Shipbuilding Co.,** Toronto.—A full canal size steel freight steamship for lake and ocean service was launched

fifth by July 31, and the remaining three by Aug. 30, 1910.

**Fraser Brace Shipyards, Ltd.,** has been incorporated under the Dominion Companies Act, with \$750,000 capital, and office at Montreal, to carry on a general transportation and navigation and towing and wrecking business, and to build and deal in steam and other vessels, marine and railway terminals, wharves, docks, power houses, etc.

**Foundation Co.,** Victoria, B.C.—At the commencement of November, 4 of the keels of the 20 wooden steamships ordered by the French Government, were laid in each of the company's two yards, and 2 more of the vessels were being framed in each yard. The launching of the first 2 vessels of the order is expected to take place during Feb., 1919.

**L. E. & A. Graham,** Port Greville, N.S., launched the tern schooner *Milorene*, Nov. 18. She has been sold to A. Moulton & Co., Halifax, N.S., for Newfoundland interests.

**Halifax Shipyards, Ltd.,** has established its head office at 286 St. James Street, Montreal.

**D. A. Huntley,** Parrsboro, N.S.,

is building for the French Government, as mentioned in our last issue, will be of the following general dimensions: length over all 204 ft. 8 in., length between perpendiculars 195 ft., beam moulded 39 ft. 8 in., beam extreme 40½ ft., depth moulded 17 ft., depth of hold 15 ft., draft loaded 16 ft. They will each be equipped with a Scott water tube boiler having 2,000 sq. ft. of heating surface. It is expected that launchings will take place in December, January, February and March.

**Wm. Lyall Shipbuilding Co.,** Vancouver, B.C.—The six auxiliary powered schooners, which we mentioned some time ago, as under construction by this firm, on its own account, are reported to have been sold to French interests for \$3,000,000. They have a deadweight capacity of 3,000 tons, and as soon as they are completed, it is stated that they are to be handed over to Trenholme & Thorndyke, Inc., Seattle, Wash., operating agents for French Government.

**Marine Construction Co.,** St. John, N.B.—The auxiliary powered schooner *Randfontein*, under construction at this yard, is expected to be ready for launching early in January. She is reported to have been sold, subject to inspection after completion.

**National Shipbuilding Corporation,** Three Rivers, Que.—Keels are being laid for all of the 10 full powered steam wooden coal barges, which this company is building for the French Government, and it is expected that the whole of them will be launched within a year. The capacity of the yards has been doubled.

**Port Arthur Shipbuilding Co.,** Port Arthur, Ont., launched an ocean going steam tug, Nov. 8, which was christened *Victoria* by Mrs. J. T. Emmerson. The *Victoria* is an all steel ocean going tug, built to Lloyd's classification. The general dimensions are: length between perpendiculars 119 ft., breadth moulded 26 ft., depth moulded 26½ ft. The propelling machinery consists of triple expansion, surface condensing engine with three cylinders 15, 29 and 47 in. diam. by 36 in. stroke, developing 800 h.p., and supplied with steam by 2 Scotch boilers 11 ft. long by 11 ft. diam. at 180 lb. working pressure. The vessel is to be delivered before the close of lake navigation.

**Port Arthur Shipbuilding Co.,** Port Arthur, Ont.—The seagoing steam tug *Murray Stewart*, similar to the tug *Victoria*, illustrated in this issue, is expected to be delivered before navigation closes.

**St. John Dry Dock & Shipbuilding Co., Ltd.,** St. John, N.B.—The New Brunswick Government is being asked, jointly with the City of St. John, to assist in financing the company to the extent of \$500,000, in view of the large amount of money the company will have to spend owing to the increased cost of machinery. The company does not ask that any portion of any subsidy granted, be paid until the keels of at least two 8,000 ton steel steamships have been laid.

**W. D. Sweeny,** Yarmouth, N.S.—The wooden steamship mentioned in our last issue as being under construction at this yard, is for the St. John Steamship Co., St. John, N.B. She will have a carrying capacity of about 450 tons.

**Taylor Engineering Co.,** Vancouver, B.C.—The motor ship, designed by this company, and built at the Vancouver Shipyards, and of which some preliminary

Ocean going tug *Victoria*, just prior to launching by Port Arthur Shipbuilding Co., Port Arthur, Ont., Nov. 8, 1918.

at this yard, Nov. 23, and christened *Le Quesnoy*, by Mrs. Campbell Reaves, wife of the Secretary-Treasurer of the John Inglis Co., Toronto. The vessel, as with previous ones built by this company, is for class 100 A1 at Lloyd's, for trans-Atlantic service, and has been built on the company's own account. Her dimensions are: length over all 261 ft., breadth moulded 43½ ft., depth moulded 28 ft. 2 in.; deadweight capacity 4,300 tons. She is equipped with triple expansion engines, 1,400 i.h.p., and 2 Scotch boilers, built by John Inglis Co.

**Fraser, Brace & Co., Ltd.,** Montreal.—The 8 wooden steamships which this company has on order for the French Government, as mentioned in our last issue, will be of the following dimensions: length between perpendiculars 195 ft., beam moulded 39 ft. 8 in., beam extreme 40½ ft., depth moulded 17 ft., depth of hold 15 ft., draft loaded 18 ft., deadweight carrying capacity 1,500 tons of 2,240 lbs. They will be coal burning steam twin screw vessels, and it is anticipated that they will be launched approximately as follows:—first by May 31, second and third by June 30, fourth and

launched the schooner *Huntley*, Nov. 18. She is 612 tons gross and 480 tons net, class for 13 years with Bureau Veritas. She is to be equipped with auxiliary power, and when ready for sea, will take on cargo for Italy. She is owned in Newfoundland.

**W. R. Huntley & Son,** Parrsboro, N.S., launched the 4 masted schooner *Governor Parr*, Nov. 20. Her dimensions are: length 218 ft., breadth 39 ft., depth 18 ft., registered tonnage 912. She is classed for 12 years with Bureau Veritas, and is equipped with a Fairbanks-Morse engine of 15 h.p. for hoisting power. She has been towed to St. John, N.B., to take cargo for South America. Her owners are C. T. White & Son, Sussex, N.B. The same firm is having 2 schooners built at the same yards, of the 3 masted type and about 400 tons each.

**The Kingston Shipbuilding Co.,** Kingston, Ont., which has been owned by the Collingwood Shipbuilding Co., for some time, has changed its name to Collingwood Shipbuilding Co., Ltd.

**William Lyall Shipbuilding Co.,** North Vancouver, B.C.—The 8 wooden steam coal carrying vessels, which this company

details were given in Canadian Railway and Marine World for May, underwent a series of trials Nov. 18. The vessel, which has been named *Teco* temporarily, has a deadweight capacity of 300 tons, and is to be operated between Seattle, Wash., and northern B.C. ports. She is arranged with a large hatch so that gasoline and distillate tanks can be put in and the vessel converted into a 1,200 barrel oil tank vessel. Her dimensions are: length 125 ft., beam 23 ft., and she is equipped with Bolinder heavy oil engine of 160 h.p. for a speed of  $8\frac{1}{2}$  knots an hour when loaded. The hull is designed with a straight bow and towboat stern with raised forecandle and accommodation for the crew aft. The keel is  $10\frac{3}{4}$  in. sided and  $11\frac{1}{4}$  in. moulded, with scarpings  $5\frac{1}{4}$  ft. long fastened with  $\frac{7}{8}$  in. galvanized bolts. There is a false keel of fir  $2\frac{3}{4}$  x  $10\frac{1}{4}$  in. and the keelson is  $11\frac{3}{4}$  x  $11\frac{1}{4}$  in., with  $5\frac{1}{4}$  ft. scarpings. The mast is 65 ft. with two 37 ft. booms and a 23 ft. boom for handling cargo. A power winch is also supplied, capable of lighting 2,400 lb. The vessel is owned by W. M. Rooke, Vancouver.

**Three Rivers Shipyards, Ltd.** (National Shipbuilding Corporation), Three Rivers, Que., has deposited with the Public Works Department, Ottawa, description of site and plans of the piers to be built in the St. Lawrence River at Three Rivers in front of Lot 9.

**Three Rivers Shipyards, Ltd.**, Three Rivers, Que.—As mentioned previously, the National Shipbuilding Corporation, 42 Broadway, New York, has purchased the entire capital stock of this company, and the plant is being operated as the company's Three Rivers Shipyard Limited Division. Arrangements have been made to double the size of the plant, in order to handle the French Government's contract for 10 wooden steamships of 1,500 tons each.

**Yarmouth Shipbuilding Co.**, Yarmouth, N.S., launched the 3-masted schooner *Marah* Nov. 21. As soon as she is ready for sea, she will load a cargo for Havana, where she will take on another cargo for the west coast of Africa.

### Atlantic and Pacific Ocean Marine.

The Hudson's Bay Co.'s s.s. *Discovery*, it is announced, is to be drydocked at St. John's, Nfld., during the winter, for a general overhaul. The report that she is to be sold is denied.

The s.s. *Afghan Prince*, which was wrecked on the Forchu shoal off the Nova Scotia coast, early in the year, broke up during a storm in November, and the wreckage disappeared. No lives were lost in the casualty, and a portion of the cargo was salvaged.

The Minister of Marine is reported to have stated at Ottawa, Nov. 25, that the British Admiralty will shortly release the Canadian Pacific Ocean Services' ocean steamships *Empress of Asia* and *Empress of Russia*, when they will be overhauled and returned to their usual service.

The Canadian Pacific Ocean Services' s.s. *Lake Manitoba*, which was very badly damaged by fire at Montreal some little time ago, has been purchased by Halifax Shipyards, Ltd., and taken to Halifax, N.S., where she will be examined and repaired. It is stated that a large sum will be spent in overhauling her and making her again fit for ocean service.

Robert Dollar, of the Canadian Robert Dollar Steamship Co., while in Ottawa recently, is reported to have stated that

his company intended to continue the operation of steamships from Vancouver to the Far East, and if business warranted it, to place additional vessels in the service. It is also reported in Vancouver that the company intends placing a through steamship service to India in operation shortly, provided certain arrangements can be made with the Dominion Government regarding a mail service, and that, should such arrangement be made, it would be desirous of entering into a working agreement with a trans-continental railway.

The report is again revived that Canadian Pacific Ocean Services, Ltd., is negotiating for the acquirement of a large steamship company operating between Great Britain and the Orient, and owning about 60 steamships. As we have pointed out before, there is a tendency just now toward a centralization of steamship operation, and control of British steamships, but any statements made at present, may be regarded as mere speculation. It was stated some time ago, that the British Government intended to assume complete control of its steamship lines, but this has been semi-officially denied. From the general trend of events, it would appear that the C.P.R. steamship lines will maintain their independence, but in the present state of political unrest, it is not safe to prognosticate as to how far any government may go in the nationalization of transportation services. The formation of an "all red" line encircling the world has been before the public for years, and as the largest transportation system in the world, it seems to be a settled thing that the C.P.R. lines should be the main constituent. There has, however, of late, been a strengthening of other interests, by amalgamation and otherwise, which would, under independent managements, lead to a duplication of services.

### Maritime Provinces and Newfoundland.

Capt. H. T. LeBlanc, Yarmouth, N.S., is reported to have sold the s.s. *Vera B. Collins* to VanHamelryek & Co., Belgium.

The s.s. *Cascapedia*, owned by Nova Scotia Steamships, Ltd., was wrecked during a severe storm along the Atlantic coast, Nov. 17, whilst en route from Halifax, N.S., to St. John's, Nfld. She was subsequently set on fire and abandoned. The crew were all rescued by a British s.s. *Bellerophon* and landed at Falmouth, England. The *Cascapedia* was built at Dundee, Scotland, in 1895, and named *Fastnet*. Her dimensions were: length 245.2 ft., breadth 35.2 ft., depth 22.5 ft.; tonnage 1,849 gross, 1,185 register, and she was equipped with engine of 260 n.h.p. driving a screw. She was owned formerly by Canada Steamship Lines, Ltd.

### Province of Quebec Marine.

The s.s. *St. Croix*, running between Lotbiniere and Quebec, broke her propeller during a storm, Nov. 19, and was beached at St. Antoine de Tilley.

The St. Charles River at Quebec was closed to navigation Nov. 10, owing to the replacement of the railway swing bridge near the mouth.

The Quebec & Levis Ferry Co.'s s.s. *John S. Thom* is reported to have been sold to New York parties for \$180,000. She was built at Detroit, Mich., in 1890,

and named Henry R. James. Her dimensions are: length 240 ft., breadth 40 ft., depth  $14\frac{3}{4}$  ft.; tonnage 1,440 gross, 911 net, and she is equipped with engine of 110 n.h.p., driving a screw. The company is stated to have declared a bonus of 50% on the stock holding.

Dredging has been completed and the areas swept by the Public Works Department, in the main channel in Lake St. Louis, as follows:—the shoal area north of the axis of the main channel about half a mile above Dixie front range light, to a depth of 16 ft. for a distance of 115 ft. from the axis of the channel, and for 220 ft. a little above red gas buoy 76S; a width of 105 ft. has been dredged off the north extreme of the shoal which extended from the southward to within 35 ft. of the Dixie range lights, and this has been swept to 16 ft. and gives a channel width of 140 ft. south of the axis of the range. The removal of portions of these three shoals gives a clear channel on the alignment of the Dixie lights, with nothing nearer the alignment than 140 ft. on the south and 115 ft. on the north. The department from the alignment at gas buoy 77S, formerly necessary, is not now required.

### Ontario and the Great Lakes.

The Toronto City Council is suing Canada Steamship Lines for income tax for 1917 and 1918, amounting to \$37,406.25, on assessments made in 1916 and 1917.

James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, has denied the report that he had purchased the C.P.R. steamships *Alberta*, *Athabasca* and *Manitoba*.

Insurance in general for vessels on the Great Lakes expired at midnight Nov. 30, but it was stated that arrangements had been made for some extension of time, and that a number of vessels would sail after that time.

The U.S. Lake Survey has given notice that the barge no. 1, formerly a Lake Michigan car ferry, loaded with lumber and in tow of the s.s. *Mathew Wilson*, broke in two during a storm on Nov. 8, and sank near North Point, Thunder Bay, Lake Huron.

The Minister of Public Works was reported to have stated at Ottawa, Nov. 16, that next year's estimates would include a sum sufficient to complete the turning basin in Ashbridge Bay, and the concreting of the crib work on the Sunnyside section of the Toronto harbor. The amount involved is said to be about \$500,000, of which \$150,000 will be a revote.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level for October, as follows: Superior, 602.49; Michigan and Huron, 581.18; St. Clair, 575.50; Erie, 572.29; Ontario, 246. Compared with the average October levels for the past 10 years, Superior, 0.14 ft. below; Michigan and Huron, 0.77 ft. above; Erie, 0.21 ft. above, and Ontario 0.18 ft. above.

The s.s. *Chester A. Congdon*, owned in Duluth, Minn., while en route from Fort William to Port McNicoll, ran ashore at Canoe Rocks, near Passage Island, at the head of Lake Superior, Nov. 6, and became a total loss. The crew were all safely removed before the vessel broke during heavy weather following a strong southeast gale on Nov. 8. The cargo consisted of 380,000 bush. of wheat for the Wheat Export Co., and together with the hull, is valued at \$1,500,000, which is said

to be the largest individual loss on the Great Lakes.

### British Columbia and Pacific Coast.

The C.P.R. s.s. Island Princess was withdrawn from the Gulf Islands service Nov. 19, for general overhaul. The ser-

vice is being performed by the company's s.s. Otter.

The C.P.R. resumed its Alaska steamship service, Nov. 17, with the sailing of the s.s. Princess Mary from Vancouver. This is the first of the company's vessels to be placed on that route since the loss of the s.s. Princess Sophia at Vanderbilt Reef.

The Naval Service Department's patrol steamship Galiano, foundered off the Danger Rocks, Queen Charlotte Islands, during a gale, about Nov. 18, all hands being lost. She was built at Dublin, Ireland, in 1913, and was screw driven by engine of 161 n.h.p. Her dimensions were: length 162.3 ft., breadth 27.1 ft., depth 13.1 ft.; tonnage, 393 gross, 129 register.

## The Harbor of St. John, New Brunswick.

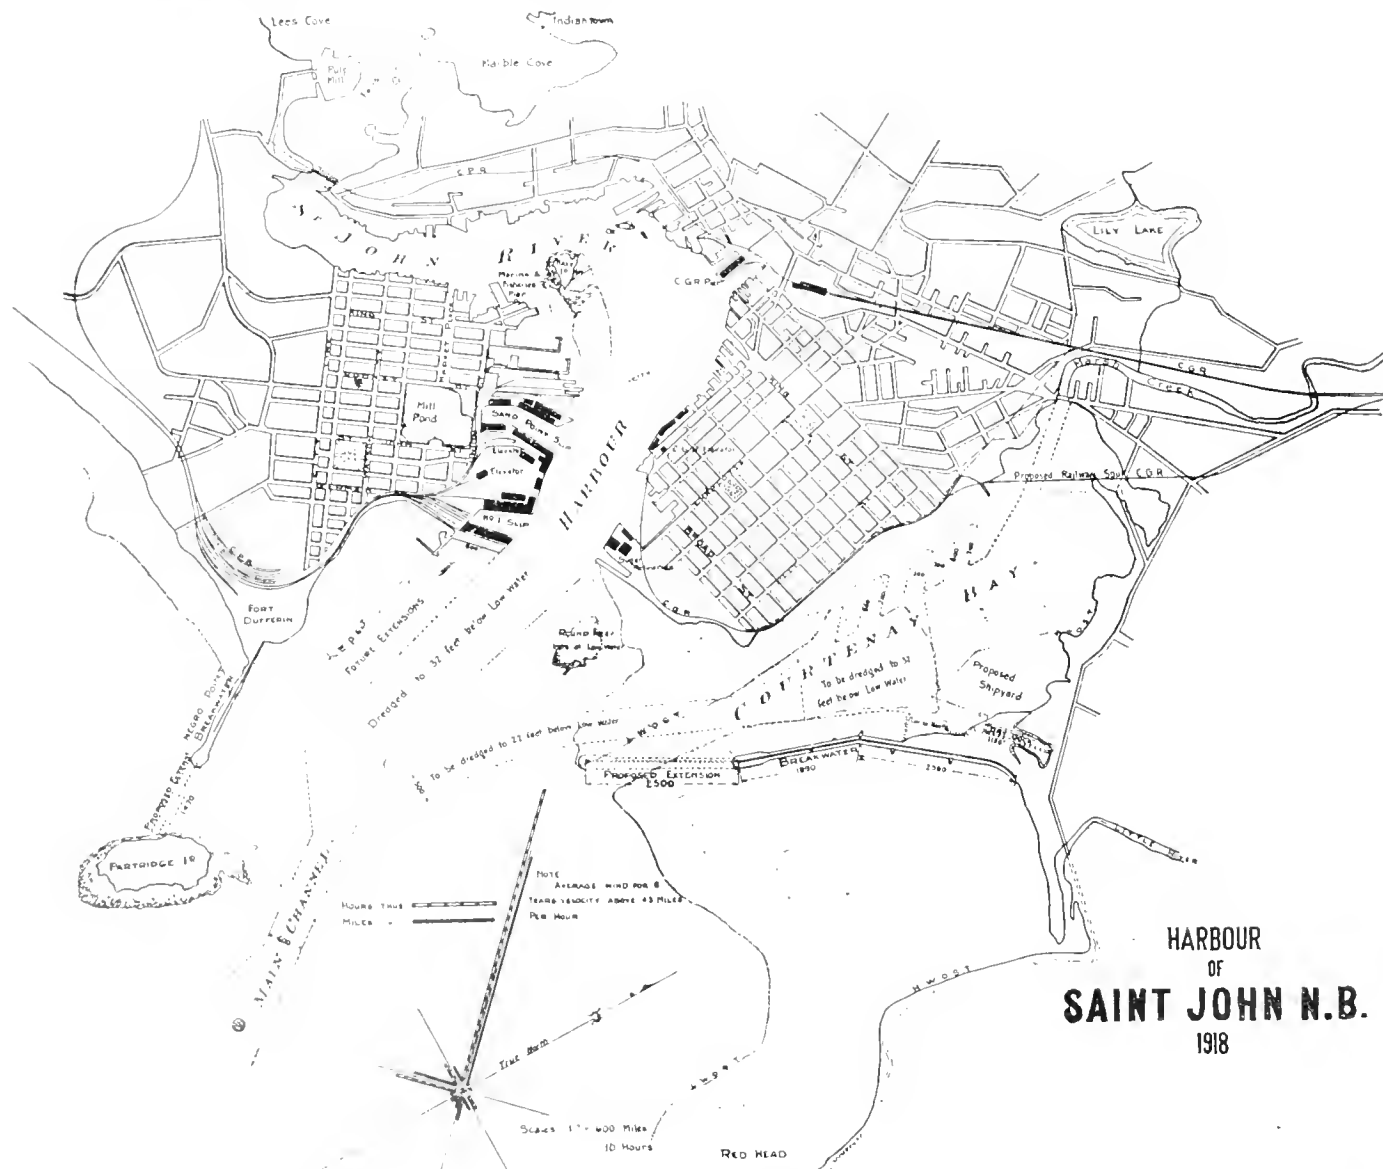

By Alex. Gray, Harbor Engineer, Dominion Public Works Department, St. John, N.B.

St. John harbor is situated at the estuary of the River St. John, which is about 460 miles long, with a drainage area of 26,000 square miles, and an average flow of about 20,000 c.f.s. Numerous articles have been published on the tidal phenomena in the Bay of Fundy, and St. John River, but it is unnecessary to deal with these in this paper, further than in

the water surface of the river is 15.0 ft. above low water datum of harbor, and the tidal range in the harbor is 13 to 30 ft. The variation of the sea level, therefore, at high water is from 2 to 14 ft. higher than the river, thus forming at every tide the Reversing Falls. The extreme high water of the river during spring freshet rises from 10 to 18 ft.

later than high and low water in the harbor. The average tidal rise at Indian-town, about half a mile above the falls, is about 1.3 ft.

The gorge at the head of the harbor, with its merged reef, forms a slack water reach, which is navigable for small craft from St. John to Fredericton, about 84 miles, and for a total of about 90 miles

so far as they affect the engineering features of harbor development.

The river discharges into the head of the harbor, through a rock gorge about 1,200 ft. long and 400 ft. wide. The small cross sectional area of the channel does not admit the flood as fast as it rises, or discharge the ebb as fast as it falls into the bay. The minimum summer level of

above the minimum. Navigation between the harbor and the river is only possible for a period of from half an hour to an hour, occurring before and after high water—the time generally being about 2½ hours ebb and 3½ hours flood. At Indian-town, about a mile above the falls, high water occurs about 1 hour 6 minutes, and low water occurs 2 hours 20 minutes,

on several tributaries of the river. This slack water reach acts as a settling basin, in which the heavier silt is precipitated.

The exposure of the harbor is from the southeast to the southwest. The prevailing winds are from the northwest, from which quarter the severe storms generally originate, and afterwards change to the south, causing considerable inconvenience

in the harbor. The height of the maximum waves during these storms is about 10 ft.

The Negro Point Breakwater, 2,250 ft. long, is of the rubble mound type, with stones placed at random on the outer slope, weighing 2 to 8 tons, with concrete superstructure for about 940 ft. It was originally designed with a cribwork core, commenced in the spring of 1875 and completed in Sept., 1877. A heavy storm, however, on Feb. 11 and 12, 1879, carried away 1,300 ft. of the cribwork, to from 10 to 19 ft. below high water. From that date to about 1887, work was carried on annually in placing stone to bring the seaward side to a uniform slope of 3 to 1. There is now a concrete superstructure 15 ft. wide for a length of 946 ft. The seaward slope at concrete superstructure is 2 to 1. The portion of breakwater, without concrete superstructure, has been raked down by storms to a slope of about 6 to 1, and the crest has been moved towards the harbor about 35 ft. off center line. Around the lighthouse, are placed concrete blocks, weighing 60 to 80 tons each; they are founded a little above low water level. Mr. Shewen, who designed these blocks and the method of construction, arranged the work so that the pouring of concrete was begun as soon as the foundation was dry, and proceeded with at such speed so as to keep the top of the block above the rising tide, the covering of the casing being pressed down upon a cushion of jute, stuffed with oakum, before the tide rose to the top of the block. After extreme storms, marks on the stones, the disappearance of seaweed from the surface, and the displacement of the larger stones indicate the considerable forces exerted. The concrete work in the breakwater is in first class condition, and offers encouragement for concrete in salt water, providing sufficient care is exercised in mixing and placing.

Observations with a marine dynamometer give the force of waves at breakwater a pressure of upwards of 4,000 lb. per sq. ft. Part of the concrete work and the dynamometer observations were carried out under the direction of Major E. T. P. Shewen, who was for a number of years District Engineer for the Public Works Department.

Through the opening of about 1,500 ft. between the end of the breakwater and Partridge Island, heavy southerly waves break and expand, following the ragged face inside the shore, and continue to roll toward the harbor, causing such extensive erosion of the coast line that protective measures had to be taken in building a revetment wall along the foot of Fort Dufferin.

The principal development in the harbor to date has been on the west side, on which there are 10 berths, with 32 ft. draft, and room for 15 additional berths as soon as Negro Point breakwater is extended to Partridge Island, and railway facilities re-arranged. On account of the limited frontage, and the railway terminal situation, however, the harbor is being developed from both sides.

The entrance channel is 12,000 ft. long, 600 ft. wide, and 32 ft. clear depth at low water is maintained by annual dredging. The annual siltation varies, but generally amounts to about 2 ft.

When the Negro Point Breakwater is extended to Partridge Island (about 1,500 ft.) the littoral drift from the southwest will be arrested and the flow, more concentrated in the channel, will increase the scour and assist in maintaining the channel depth.

The materials dredged in the harbor are principally clay, sand, gravel and silt.

There is a considerable quantity of submarine rock to be removed in order to straighten the channel, but on account of the extreme cost, this work is being delayed.

During the year, there are generally only 2 to 8 tides below zero, forty 0.5 tides, and 60 tides 1.5 ft. above zero, the remainder of the tides range from 2.3 to 6.7 ft. above zero. Boats generally prefer to berth at slack water; it is, therefore, evident that the channel is navigable for the largest steamships.

The wharves are built to provide 32 ft. at low water. The harbor fortunately is free from the teredo, limnora and other sea worms. The type of construction has been timber cribwork and concrete with cribwork substructure. On account of the scarcity and high cost of timber and the necessary extreme height of the wharves, about 65 ft., other types of structure are being investigated.

The outstanding features in St. John harbor are the extreme range of tide and the consequent currents. The inward mean tidal flow is about 20,000 c.f.s. and the outward is about 40,000 c.f.s. The maximum surface current velocity at the minimum section in the harbor is about four miles an hour.

Unfortunately, no systematic meterings have been made of the river, and consequently its flow is only an estimate. A series of float observations have been taken at various stages of the tide, and at various depths below surface. These show very erratic current conditions. The fresh water from the river flows out while underneath the tide rises and falls regularly.

The principal wharves are of cribwork, with concrete superstructure, the cribs being placed on a prepared dredged bed, covered to an average depth of 5 ft. with broken rock. Behind the cribs, selected dredged material is filled in, on which the necessary railway sidings and sheds are built. The sheds are one story, of timber construction. At a number of the wharves, grain conveyors are built, from which boats can be loaded with grain at any stage of the tide. In addition to vertical fenders of 12 x 12 in. hard pine, floating fenders about 36 in. diameter and 33 ft. long, are placed about 80 ft. centers. In berths 15 and 16, which are more exposed to wave action, the life of these floating fenders does not exceed two years.

The Courtenay Bay development, on the east side of the harbor, comprises the building of a dry dock 1,150 ft. long and 125 ft. wide, with 40 ft. of water on sill at high water, ordinary spring tides, and elevation of sill 14 ft. below low water, spring tides; the building of a breakwater 7,070 ft. long, of which 4,570 ft. has been completed; the dredging of a basin 32 ft. below zero, and channel 22 ft. below zero (zero being extreme mean low water). The details and layout of the wharves have not been decided. The breakwater is of the rubble mound type, top width 20 ft., seaward slope varying from 2 to 1 to 3 to 1, according to location.

The breakwater does not have the exposure of Negro Point breakwater and it is therefore not expected that the slopes will suffer the raking down experienced at the latter place. The stones at the outer end, weighing upwards of 10 tons, were lifted from their beds and moved about 50 ft. during a storm in October, 1917. The rock from the breakwater is obtained from the dry dock site, loaded by steam shovels and hauled by a locomotive on standard track on trestle, and dumped in the work. At the outer end of the breakwater, where the embankment is wide on account of the slopes and depth,

two trestles will be used to ensure the larger stones being placed outside.

St. John, on account of geographic situation and consequent long railway haul, is principally a winter port. The traffic in 1895 amounted to \$3,333,000 imports, and \$3,000,000 exports, whereas during 1917, it was \$16,750,000 imports, and \$200,000,000 exports.

### Mainly About Marine People.

Sir H. Montagu Allan, formerly of the Allan Line Steamships, who has been in England for some time in connection with war work, has resigned the Royal Trust Co.'s vice presidency, in Montreal, but remains on the board.

Frank McDonnell, heretofore Assistant to Chairman, Board of Steamship Inspection, Marine Department, Ottawa, who has been appointed Chairman, Board of Steamship Inspection, to succeed T. R. Ferguson, deceased, was born Oct. 18, 1878, and first entered government service Mar. 6, 1905, receiving a permanent appointment Sept. 1, 1908, and being appointed Assistant to Chairman, Board of Steamship Inspection, April 1, 1917.

J. W. Norcross, Vice President and Managing Director; F. S. Isard, Comptroller, and M. J. Haney, another of the directors, Canada Steamship Lines, Ltd., left Montreal, Nov. 22, for London, Eng., for consultation with the company's advisory board there, concerning the company's future policy respecting ocean trade.

E. W. Holton, whose appointment as General Freight Agent, Northern Navigation Co., Sarnia, Ont., was announced in our last issue, was born at Belleville, Ont., Dec. 15, 1872, and entered transportation service as junior clerk in the local freight office at Belleville, Ont., and, until Mar., 1904, was chief clerk to General Freight and Passenger Agent, Bay of Quinte Ry., Deseronto, Ont.; Mar., 1904, to Feb. 1, 1910, chief clerk to Traffic Manager, Northern Navigation Co., Sarnia, Ont.; Feb. 1, 1910, to Mar. 12, 1913, Eastern Passenger Agent, same company, Sarnia, Ont.; Mar. 12, 1913, to Oct., 1918, General Passenger Agent, same company, Sarnia, Ont.

Alfred Erwin McMaster was presented with a set of gold cuff links and a diamond stick pin, at Port Arthur, Ont., Oct. 16, on his resigning the position of Secretary-Treasurer, Port Arthur Shipbuilding Co., having been appointed Treasurer, Whalen Pulp & Paper Mills, Ltd., Vancouver, B.C. He was born at Perth, Ont., Oct. 22, 1885, and entered transportation service in 1902, since when he has been, to May, 1903, clerk in Freight Department, C.P.R., Keewatin, Ont.; May, 1903, to 1905, clerk, C.P.R., Port Arthur, Ont.; 1905 to Aug., 1907, chief clerk, C.P.R., Port Arthur, Ont.; Aug., 1907, to Aug., 1908, agent and chief clerk to Superintendent, Grand Trunk Pacific Ry., Fort William, Ont.; Aug., 1908, to July 15, 1913, agent and General Agent, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., Prince Rupert, B.C.; July 15, 1913, to Sept. 30, 1916, Commercial Agent, G.T.P.R., Regina, Sask.; Sept. 30 to Dec. 21, 1916, Division Freight Agent, G.T.P.R., Edmonton, Alta.; on Dec. 21, 1916, he was appointed Assistant Secretary for British Columbia, Canadian Manufacturers' Association, with office at Vancouver, and resigned in Aug., 1917, on his appointment as Secretary-Treasurer, Port Arthur Shipbuilding Co., Port Arthur, Ont.

# Wooden Steamship Building in Canada for French Government.

Canadian Railway and Marine World for November contained information, with some details, as to the twenty 3,000 ton and fifty 1,500 ton wooden steamships which have been ordered in Canada for the French Government.

## The 3,000 Ton Wooden Steamships.

Following are the general dimensions, etc., of the twenty 3,000 ton d.w. wooden steamships:—

Length over all .....	293 ft.
Length between perpendiculars .....	276 ft.
Beam extreme, about .....	47½ ft.
Beam moulded, about .....	46½ ft.
Depth moulded .....	23½ ft.
Draft over keel, about .....	21¾ ft.
Deadweight carrying capacity .....	3,000 tons
Tons displacement .....	5655.5
Block co-efficient used .....	718

The vessel to be of single deck cargo type, built principally of Oregon and Washington pine, with hold beams, wood deck houses and rails. The vessel to have a cruiser or elliptical stern, with long poop deck aft and raised forecastle forward. The vessel to have 5 hatches, to have 4 watertight bulkheads, 1 bunker bulkhead which is to be non-watertight, and 1 screen bulkhead. One watertight door between engine and shaft tunnel to be furnished. Accommodations for officers will be in deck houses erected in the poop deck. Accommodations for the crews will be located in the forecastle. A bridge and bridge house will be erected at the forward end of the poop. Accommodations for gun crew of men to be arranged in the wheel house aft. Eight cargo winches, one of which is to be a warping winch, are to be installed. The windlass on forecastle head suited to handle anchors and full scope of chain, and also arranged for warping as usual practice.

Feed water tanks of full capacity to be located aft of engine room, top of tanks to be on level with all of deck forming shaft tunnels. Culinary water will be distributed from two separate steel tanks. The vessel is to be driven by twin screws, with engines located abaft amidships.

The vessel is to be built to the requirements of the Bureau Veritas for highest classification, as far as necessary for a cargo steamer. All lumber used in the construction of the vessel to be of Oregon or Washington pine and fir, unless otherwise specified. All materials to be to the satisfaction of the Bureau Veritas for highest classification. As long lengths as practically can be obtained without delay for the completion of the vessel are to be used in the keel keelsons, planking and ceilings, to be clear of shakes, loose knots and other defects and faults, and as far as possible free from sap. All decking to be edge grain, fastenings to be treenails, screw and drift bolts of galvanized and black iron as per best practice.

It is the intent of these outline specifications to describe the vessel complete and ready for sea, except for water, fuel and stores. Detail specification will be furnished later giving full description of materials and machinery entering into the construction of the vessel. The contractors are to supply the owner with vessel constructed in a workmanlike manner, satisfactory for ocean service except for water, fuel and stores. The work to be to the satisfaction of the owner, his representative, or Bureau Veritas inspectors and surveyors. The contractors are to furnish all necessary lines, offsets, construction drawings and all detail plans for the successful construction and completion of the vessel.

When completed and ready for trial, the owner will fill the bunkers with coal and water tanks with fresh water. Then a series of progressive trials will be run on a measured mile course, at which a speed of 11 knots is to be obtained. The vessels are to be delivered by the contractors at the yard at Victoria, B.C., or if the owner decides on delivery elsewhere, the contractors are to be compensated for any such delivery as per arrangement agreed upon. The contractors are to keep the vessel, including all outfit and material entering into the construction of the vessel, fully insured, both ashore and afloat, until delivered to the owner.

All scantlings to be shown in midship section and as approved by Bureau Veritas. Should any difficulty be found in obtaining the size of scantlings as shown on drawings, and as specified in detail specifications to be submitted when signing contract, it is understood that the

projecting ends of fastenings and visible iron work, including iron work on rider keelson, to be painted with red oxide paint.

The propelling machinery is to be built to conform to and meet with requirements of Bureau Veritas for highest classification. The machinery will consist of two 550 h.p. vertical, inverted, direct-acting, three-crank, triple expansion marine engines, each to develop not less than 550 i.h.p. when working under full boiler pressure. The boilers will consist of two coal-burning Scotch boilers with a heating surface of about 3,500 sq. ft., built for a steam working pressure of 225 lb. a sq. in. There will be one each: main surface condenser, auxiliary condenser with combined air and circulating pump, steam driven centrifugal circulating pump, independent air pump, main feed pump, auxiliary feed pump, fire and bilge pump, sanitary pump, general service pump, bilge pump, fresh water pump, injector, feed

Steel steam trawler 15, built for Naval Service Department, by Polson Iron Works, Toronto.

contractors are to use a different sized scantling, as long as the same is approved by Bureau Veritas for highest classification.

On top of wood keelsons, rider keelson is to be installed, to be of lattice girder construction of approved design, to the satisfaction of Bureau Veritas. All necessary davits, life boats, anchors and cable, steering engine, ladders, storerooms, and wireless apparatus are to be furnished and installed. Heating, plumbing to be furnished and installed to the approval of Bureau Veritas.

Electric lighting plant is to be installed, consisting of two 7½ k.w. engine or turbine driven generator sets complete, all wiring to be furnished and installed; one switchboard with double pole switches, ammeter, voltmeter and short circuit indicator. Entire installation to conform to the requirements of Bureau Veritas. Complete pumping arrangements to be fitted. Hand pump scuppers, fire service, etc., to be installed to the satisfaction of Bureau Veritas.

Outside planking below load waterline to be painted with 2 coats of copper paint. All above to have 3 coats of lead and finished with color as selected by owner. All interior work to have 3 coats of lead paint. Interior accommodations to be finished with color as selected by owner. All deck work, fittings, etc., to be finished in color as selected by owner. Inside of decks, clamps, etc., to be oiled and all

water heater, evaporator feed pump, oil filter, induced draft fan, electric generating set and switchboard, ice machine, and evaporators, distiller, waste and soda tanks, engineer's storeroom, workshop, together with such other machinery and outfit as is necessary for the proper operation of the ship.

The Foundation Co. of British Columbia, Ltd., has the contract for these vessels and has commenced building them at Victoria, where it has two yards, the one at which it built five 2,800 ton wooden steamship hulls ordered by the Imperial Munitions Board for the British Government, the other yard adjoining, which it has leased from the Cameron-Genoa Shipbuilders, Ltd. These two yards have 8 ways. It is expected to launch the first 8 hulls before April 1, 1919; the second 8 before Aug. 1, 1919, and the last 4 before Nov. 1, 1919. The contract calls for the delivery of the 20 completed steamships before Jan. 1, 1920. The vessels have been designed by Cox & Stevens, New York, N.Y.

## The 1,500 Ton Wooden Steamships.

The vessels, which are described as first class full powered barges, will have the following general dimensions:—

Length over all .....	204 ft. 6 in.
Length between perpendiculars .....	195 ft.
Beam, moulded .....	39 ft. 8 in.
Beam, extreme .....	40 ft. 6 in.
Depth, moulded .....	17 ft.
Depth of hold .....	15 ft.
Draft, loaded .....	16 ft.

They are to be built of Douglas fir, all timber in keel, keelsons, stem, apron, stern post, frames, deadwoods, ceiling, deck beams, stanchions, pointers, breast hooks, etc., to be no. 1 merchantable; planking, bulwarks, rails and rail stringers, waterways, coamings and all timber above deck, to be no. 1 select, and the deck is to be clear vertical grain, no. 2 grade. The ceiling from floor to clamps to average 40 ft. lengths, also the clamps, planking above the bilge to deck, and waterways, while the rail is to be in lengths of not less than 40 ft. and the planking and bottom on bilges to average 35 ft. Keel, sided 18 in., moulded 12 in. net; shoe, sided 12 in., moulded 3 in. net; frames, half sided 8 in., moulded 20 in. at keel, 14 in. at bilge, 8 in. at head, spaced 27 in. centers. From the break of the bridge deck aft, and the fore-castle deck forward, the frames to run up to rail double, and between these points the frames to be single from deck to rail. Stem, sided 18 in., moulded about 24 in., and connected to keel with a natural crook fir knee, or in other approved manner. Apron, sided 18 in., moulded 18 in.; deadwood, sided 18 in.; stern post, sided 18 in. at keel, moulded 24 in., and connected to keel with fir knee. Rudder trunk to be bolted securely to stern post. The main and sister keelsons to be sided 16 in. and moulded 14 in.; first and second rider keelsons to be sided 14 in. and moulded 14 in. From sister keelsons to main deckhouse, the ceiling to be 8 by 11 in.; the 'tween deck ceiling to be 4 in. thick, butted and spike fastened; main ceiling to be scarphed from the turn of the bilge to the main deck beams, and edge bolted in each frame space. No scarphs allowed on the same frame without at least 3 strakes between. Beams at the hatches to be moulded 12 in. and sided 14 in.; sided 12 in. and crowned 6 in. Chocks to be fitted between deck beams, securely fastened to frames, leaving proper air space, and beams to be spaced 36 in. center to center. There is to be one 12 x 14

in. beam in the lower hold, placed directly over every other main deck beam; these, however, to be omitted in the way of machinery, and compensating fore and aft members added. There are to be 3 sets of pointers at each end of vessel, to be sided 12 in. and moulded 10 in. at top and at least 14 in. at bottom, and run diagonally from the center of deadwoods, aprons, etc., well up to the upper deck beams. These pointers to be connected at the lower ends across the deadwood with fir knees 12 in. thick and at least 4 ft. arms. There are to be stanchions 12 x 12 in. under every beam and under the hatch corners, and at each side of the stanchion heads there is to be a 5 x 10 in. plate; chocks to be fitted between the stanchions on top of rider keelson, and top of stanchion to have hardwood cap; rods 1½ in. upset to 2 in. turnbuckle to be placed between the beams, with ¾ x 6 in. plate washer on the outer ends let into the frame. The rudder stock to be in one piece of iron bark, 18 in. diam., the balance of the rudder to be fir. The bulkheads, as may be required in peaks and forward and aft machinery spaces, to be of two thicknesses of 3 x 6 in. tongued and grooved stock, finished down to about 2¼ x 5¼ in. face laid diagonally in opposite directions, and canvas laid in white lead paint to be laid between the two thicknesses. Beams so arranged that one m.d. and one t.d. beam are secured to face of bulkhead.

The 2 masts and 6 cargo booms are to be of Oregon pine, of suitable diameter and strength for handling cargo equal to about a 3 ton lift. The general accommodation and quarters, include wheel house and chart room, berths, mess rooms, pantry, galley, store rooms and ice house, lavatories, etc. Each vessel is to be equipped with two lifeboats 20 x 6 x 2½ ft., with swinging davits. All anchors to be of the stockless type.

The propelling machinery to consist of 2 vertical inverted direct acting compound surface condensing engines, with cylinders 12 x 24 in. diam. by about 16 in. stroke, turning outboard when going

ahead, capable of developing 275 i.h.p. with no live steam in the receivers, at not more than 175 r.p.m. Steam is to be supplied by either one return tube, 3 furnace, single ended Scotch boiler, with a total heating surface of 1,800 sq. ft., or one water tube boiler with heating surface of not less than 2,000 sq. ft. The propellers are to be solid, 3 bladed cast iron. There is to be one main condenser independent of the main engine, one main circulating pump of centrifugal pump with 6 in. suction and discharge; main air pump, vertical single acting beam type, 7½ x 14 x 10 in.; 2 main and auxiliary feed pumps of vertical simplex type, 7½ x 4 x 10 in.; general service pump, horizontal duplex type, 7½ x 4½ x 10 in.; fire, bilge and general service pump, horizontal duplex type, 7½ x 4½ x 10 in.; sanitary pump, 5¼ x 4¾ x 5 in., and evaporator feed pump or centrifugal pump with 6 in. suction ejector is to be provided, operated by water from fire, bilge and general service pump. Feed water heater of approved type to be of sufficient capacity to heat 12,000 lb. feed water an hour from 80 to 212 deg., using exhaust steam at 5 lb. a sq. in. Feed and filter tank of 325 gall. to be placed in convenient location in the engine room.

The deck machinery is to include a spur geared windlass with horizontal engine and 2 gypsy heads aft, 12 in. diam.; vertical steam winches; steam and hand steering gear of approved type with about 6 x 6 in. double cylinder engine; steam capstan with engine in the base. The electric lighting system to consist of 10 k.w. marine type generating set, driven by vertical self oiling engine of approved make for 150 lb. steam pressure; dynamo to be compound wound of the multipolar type. There are also to be provided, mechanical telegraphs, water tanks, donkey boiler, etc.

When completed, the vessels are to have endurance trials, under conditions and with results satisfactory to the owners. The propelling machinery and auxiliaries are to be designed for a speed of 9½ knots under light load.

## The Deputy Minister of Marine's Report on Shipbuilding, Etc.

The Deputy Minister of Marine, Alex. Johnston, in his report to the minister for the year ended Mar. 31, 1918, issued recently, says that "the question of supreme moment, not only in the shipbuilding world, but in the world at large, is the relation of shipbuilding to ship sinking, for on this may hinge the issue of the war." Considerable space is devoted to weekly particulars of British sinkings, sailings and arrivals, from April 1, 1917, to April 1, 1918, the totals being as follows:—

Sinkings over 1,600 tons.....	896
Sinkings under 1,600 tons.....	334
Sailings and arrivals.....	289,127

The total number of ships sailing to and from British ports during the fiscal year 1917-1918, exclusive of fishing vessels, was, as above stated, 289,127, and the total losses due to war causes were 2,230, or 1.425%.

Details are given of the losses and building of allied and neutral shipping from Aug., 1914, to June 1, 1918, but as these are, of course, now out of date, it would not be of interest to reproduce them. Following are extracts from the report:—

**Canada and Sea Transport.**—Prior to the war, and for sometime after, there

were 10 large ship companies operating between Canadian and British and continental ports; owing, however, to the increasing toll of British, Allied and neutral shipping taken by mine and submarine and the shortage resulting, the demand for ships grew more insistent, and a number of vessels were taken from the Canadian and transferred to the Mediterranean and other routes wherever the need was most pressing; so that the conditions facing Canada today are, that whereas a few years ago there were 10 companies operating at full capacity between Canadian and British and foreign ports, there are now only about half that number, with less than half the previous number of ships, operating intermittently.

In the reconstruction period after the war there will be an increased demand for Canadian raw material and foodstuffs, and very possibly for manufactured articles as well, Canada being now a very much better known and more widely advertised country, and as British shipping to this country has been cut down by half and is not likely to be re-established for some years, owing to the lack of shipping everywhere and the need of shipping on all routes, it is apparent that if Canada is to have the required transportation,

she must acquire the necessary ships.

**Government Shipbuilding Programme.**—There are three ways of establishing a merchant marine: by purchase outright, by placing orders with foreign shipyards for delivery at a stated time, or by building in home shipyards. Australia during the first years of the war, feeling the pinch of lack of transport, bought 16 cargo steamships, which not only relieved the congestion of her own export trade, but were of service in the general carrying trade of the Empire.

The great advantage of outright purchase is that the earning power of the ships, and payment of dividends on their outlay, begin at once; the deadweight price of freighters just now for immediate or prompt delivery is abnormally high, about \$200 a ton, and indeed it is doubtful if any considerable number could now be obtainable at that or almost any price, as shipyards all over the world, including the Japanese, are being worked to their full capacity to supply ships for their own merchant marine, in anticipation of the tremendous demands that will be made on ocean tonnage in the period following the war. Taking these factors into account, the Canadian Government has decided to build annually 200,000 tons

of merchant shipping at an estimated cost of between \$40,000,000 and \$50,000,000. The annual output of 200,000 tons contemplated is only the beginning of the Canadian merchant marine fleet, and the probability is that in 1919 or thereabouts the government project will be considerably extended. The ships will be at the disposal of the British Admiralty during the war period, and at its close will revert to Canada to be operated either by the government itself or by Canadian ship-owners under charter from the government. (Editorial note.—Since the report was written it has been decided that the vessels will be operated by the Canadian National Railways.)

**Merits of Plan.**—There are a number of advantages accruing from the plan adopted by the government for the building of a merchant fleet. In the first place the cost per ton deadweight will be less than if the contracts were given to foreign yards for prompt delivery. The money involved, instead of going out of, will be spent in the country in aiding an industry the growth of which is important to the future welfare and development of Canadian trade and commerce. It will be the means of providing, when its scope is extended, for a number of munition workers who will be thrown out of employment after the war, particularly if rolling mills on a more or less extended scale are started in connection with the Canadian shipbuilding industry; and finally, it will mean the augmenting of a class of men invaluable to any country—the merchant mariners.

In order to hasten the construction of the vessels, it was deemed advisable to utilize to the utmost the present Canadian yards, and to work at full pressure, rather than to multiply the number of shipyards, some of which would in all probability be undermanned for some time owing to lack of skilled workmen.

**Standardizing the Ships.**—Three principal types of vessels will be built under the government plan. The first type will consist of vessels of about 3,750 tons d.w. capacity, length over all 260 ft., speed 9 knots; these vessels will be of the tramp type, and will be built principally in the Great Lakes shipyards, to avoid difficulty with canal locks. An intermediate type will include ships of 4,300 tons deadweight capacity, length b.p. 320 ft., speed 12 knots. The second type will comprise vessels of 5,000 to 7,000 tons d.w., cargo liners, length over all 331 ft., speed 11½ knots. The third will consist of combination liners, as provision will be made for carrying passengers as well as cargo; they will be of 8,000 to 10,000 tons d.w. capacity, length over all 400 ft., speed 12 knots.

These ships will be all built to a standard set of plans and specifications prepared for each type by the department's Chief Naval Constructor and his staff to ensure uniformity and speed in construction, and the work of supervising the vessels while actually under construction in the different Canadian shipyards will also be undertaken by this body.

It is found by actual experience that the cargo vessel which gives the best return on outlay is one ranging between 7,000 and 10,000 tons d.w. capacity; below 7,000 tons and over 10,000 the ratio of wage-earning capacity to the cost of building is not so favorable. This last type will fulfil this very essential condition, and will be the one which will perform the bulk of the work of Canadian sea transport.

**Personnel.**—The work of providing

suitable crews for the new Canadian merchant marine fleet will be of the first importance. The Marine Department issues all certificates for masters, mates, and engineers of sea going vessels, and is keeping an exact monthly register of all the men who are qualified for these positions, and of their whereabouts in order that their services may be requisitioned when required. Every encouragement is also being given to seamen to induce them to attend the navigation schools at Halifax, Yarmouth, St. John, N.B., Kingston, North Sydney, and Vancouver, to take courses in navigation before qualifying for their certificates. The Canadian Naval League is aiding in the formation of naval brigades for the training of the young, and is carrying on an educational campaign emphasizing the importance to Canada of the building up of a merchant marine. It is important that the personnel of the officers and crews of Canadian merchant ships should be confined as far as possible to Canadians, failing these to British or Americans, to ensure a common language. The employment of alien crews should be avoided at all costs.

The principal shipyards for the building of steel cargo vessels in Canada are as follows:—

	Berths
British American Shipbuilding Co., Welland, Ont.; shipyard only.....	3
Canadian Vickers, Ltd., Montreal; shipyard, engine and boiler shops and floating dock....	5
Canadian Allis Chalmers, Ltd., Bridgeburg, Ont.; shipyard, engine and boiler shops.....	3
Collingwood Shipbuilding Co., Collingwood, Ont.; shipyard, engine and boiler shops.....	4
Davie Shipbuilding & Repairing Co., Lauzon, Que.; shipyard and drydock.....	4
Midland Shipbuilding Co., Midland, Ont.; shipyard only.....	2
Nova Scotia Steel & Coal Co., New Glasgow, N.S.; shipyard only.....	2
Polson Iron Works, Ltd.; shipyard, engine and boiler shops.....	4
Port Arthur Shipbuilding Co., Port Arthur, Ont.; shipyard, engine and boiler shops.....	4
Thor Iron Works, Ltd., Toronto; shipyard only	5
Tidewater Shipbuilders, Ltd., Three Rivers, Que.; shipyard only.....	2
Wallace Shipyards, Ltd., Vancouver, B.C.; shipyard, engine and boiler shops.....	3
	45

**Canadian Shipbuilding Disabilities.**—In last year's report allusion was made to certain drawbacks attending the initial stages of Canadian shipbuilding; there is no reason why these should not be overcome in the course of a few years, with the exception of that of the climate, which in certain localities will not permit the launching of ships at all seasons. At present the greatest obstacle to the rapid and cheap production of steel ships in Canada is the lack of rolling mills capable of making steel plates and structural steel shapes for the larger cargo ships, in quantity; all the other parts of the ships, including the engines, can be made in Canada, but in order to carry its programme of building merchant ships to a successful completion, it was necessary for the government to enter into negotiations with United States firms for the supply of the needed plates and shapes; although the Americans at present are very much occupied with their own shipbuilding problems, these negotiations have fortunately been successful, and the necessary supplies for the Canadian merchant fleet have been assured. It will, however, be of great advantage to the industry if, after the war, every effort is made to establish rolling mills on an extensive scale in suitable localities, in order that all the demands made on Canadian shipbuilding may be met by Canadian firms.

**Insurance Rates and the St. Lawrence**

**Route.**—The formation of a Canadian merchant marine brings into greater prominence the question of the restrictions placed on the trade of this route by insurance underwriters, as compared with Atlantic port routes; restrictions which, in the opinion of a number of men qualified to judge, are somewhat unfair. This high rate of insurance means an additional overhead charge on all vessels using this route. The discrimination against the St. Lawrence route has been carried out despite the constant work of improvement done in the widening and deepening, and the lighting and buoying of the ship channel between Montreal and Father Point. The expenditure on this work has exceeded \$1,000,000 annually for the last three years, and the total cost of the channel since its inception in 1851 to the end of the fiscal year 1917 has been \$21,520,371.

From Montreal to Quebec is 160 statute miles, and from Quebec to Father Point 181, and it is doubtful if any other waterway in the world of equal extent is more thoroughly safeguarded. In the department's report for 1916-17, the Superintendent Engineer of the St. Lawrence ship channel drew attention to a communication received from Henry Fry & Co., Lloyds agents at Quebec, emphasizing the fact that no accident had occurred to any sea-going vessel between Father Point and Quebec in the course of the year, and he attributes this not only to the improved lighting and buoying of the channel, but also to the increased efficiency of the Pilotage Service. If the continued improvement and additional safety of this route from year to year have not the desired effect of inducing Lloyds to lower the insurance rates for vessels trading on it, it may be necessary, in the interests of Canadian shipping, for the government itself to take some steps to equalize the difference between the rates to Quebec and Montreal and those to the Atlantic ports.

**British Merchant Vessel Losses.**—It was announced in the British House of Commons, Nov. 6, that 8,946,000 tons of British merchant ships had been lost during the war, to Sept. 30, through enemy action. Of this tonnage, 5,443,000 tons had been replaced by new construction, by the purchase of vessels abroad, and by utilizing captured enemy vessels. The output of tonnage throughout the world for three months ended Sept. 30, exceeded the losses from all causes during the same period, by nearly 500,000 gross tons. During this period, the United Kingdom's new construction was 411,395 tons, and that for allied and neutral countries, 972,735 tons. For October, the tonnage of merchant vessels completed in the United Kingdom, and entered into service, was 136,100 tons.

**The St. John Dry Dock & Shipbuilding Co.**, the general contractor for the harbor improvements being carried out in Courtenay Bay, St. John, N.B., advises that work has been commenced on the 2,500 ft. breakwater extension, by placing the rock excavated from the dry dock site. This will be continued for about two years, and the construction of the dry dock will be commenced in about 18 months, when sufficient progress has been made with the excavation. Dredging will not be started until next year. The subcontractor on this work is the Bedford Construction Co., and the engineer in charge for the contractors is E. G. Cameron, formerly engineer in charge of sec. 3, Welland Ship Canal, for the Railways and Canals Department.

## The Halifax Drydock's Expropriation Criticised by the Halifax Graving Dock Company's Chairman.

S. M. Brookfield, Chairman, Halifax Graving Dock Co., Ltd., Halifax, N.S., wrote Canadian Railway and Marine World, Nov. 6, as follows:—"Your August issue, which I have only just seen, contains an article upon the expropriation of the Halifax drydock and the establishment of a shipbuilding plant, which is not only misleading, but contains statements which are at variance with the truth. If this confiscation can be legalized, it will be a disgrace and a blot upon the escutcheon of Canada forever.

"The Minister of Public Works is reported as saying he had informed the Privy Council on May 24, 1918, that the drydock was badly damaged and practically destroyed. He mentions the importance of the dock, and says an agreement was entered into whereby the dock company was to furnish \$111,000 of insurance and the Dominion Government was to reconstruct the dock. He also says, at this late date, that the progress made by the drydock company had not been satisfactory and from reliable information he valued the dock at \$1,100,000, and recommended that this offer be made to the company. Then on June 4 he reported to the Privy Council that, according to the order in council of May 27, the drydock had been expropriated, and recommended that it be leased to the Halifax Shipyards, Ltd., for one year for \$62,500, that company to have an option on the property for one year at \$1,250,000. The article further states that after the dock was wrecked by the explosion on Dec. 6, 1917, the Public Works Department, under its superintendence, took over the work of reconstructing it, but as soon as arrangements were made to expropriate the property it discontinued the work.

"You will note the Minister says we did not make sufficient progress, and the article states that the work was done by the Public Works Department. The explosion was a terrible calamity for us, chiefly on account of the loss of life, which was irreparable, and was quite sufficient to knock us all down for a time; in fact, some of the men have not yet recovered. However, we could not forget that the war was on, and that transports, the hire of each amounting to several thousand dollars a day, were waiting for repairs, and to have guns mounted upon them. We did not ask any government assistance, but lost no time in getting our Dartmouth shop in commission for work, and started the dock two days after the explosion, working continuously night and day and Sundays, putting up temporary buildings, installing boilers and pumps, building flues, chimneys, etc., so that we were able to begin repairs to the ship in the dock on Jan. 11. Considering our difficulties and the weather we had to contend with, it was something to do.

"You will notice that the Minister reported to the Privy Council on May 24—169 days after the explosion—that we did not make sufficient progress. Surely if he had the slightest fault to find with us, it was up to him to state it long before that date. I now call upon him to publish wherein we failed to make progress, because it is not true, and until refuted or proved it is a reflection upon our management. We can easily prove that every energy was made to get the dock and plant ready; in fact, before the explosion we had ordered extra machinery to ex-

peditate transport work, never thinking for a moment that it would be for the benefit of other people who had never put one dollar into the company and who had done nothing for the benefit of our port. We had great difficulty in getting this machinery, but succeeded.

"On Dec. 29 the Minister agreed to reinstate the dock, which would add \$400,000 to \$500,000 to its value to the company. It was a national loss, so why should not the Government reinstate it, especially as the Government was reinstating our citizens who had suffered by the explosion. We were to give the Government the benefit of our insurance. On Feb. 8, the Deputy Minister and two men from the department came and told us how they wanted the accounts kept. Bills were to be rendered monthly, but up to date, 11 months, the Minister has declined to authorize payment of one cent expended on account of the contract he made with us to reinstate the dock, which has cost us approximately \$185,000, so his agreement is simply a 'scrap of paper.' We then asked for a payment of account of the purchase price of the dock, but this also was declined, on account of the title not having been reported upon. We have had the property for over 33 years, and the title was not sufficiently good for the government to pay an installment upon, but was quite good enough to hand over to another company to continue our business.

"In order to improve the dock and its plant we employed the best engineers we knew, consulted them as to electrifying our plant and followed their recommendations. In connection with this account, which we call 'improvement,' we have spent over \$35,000 in equipment, which the new company has installed. On Sept. 25, we wrote the Halifax Shipyards, Ltd., asking it to pay this account, but so far we have received nothing but an acknowledgment of our letter. So you see that the drydock property which has been taken away from us is being operated with our machinery.

"Our dock was the pioneer dock in Canada, and look what a benefit it has been to the nation, especially since the war. We went through hard times, but some time ago we turned the corner and it was paying well. It certainly was not the time for the Government to deprive us of it. The Minister states the rental is to be \$62,500 (about half of what it should have been), which is 5% upon \$1,250,000, and 1/2% less than the government is paying for money today. Upon this valuation the dock would easily pay 30%. On May 18 in Ottawa the Minister offered us \$1,250,000, and the same offer was made on June 12 when he was in Halifax, but we refused it. He now offers us \$1,100,000, which, less our expenditure of \$220,000, would only net us \$880,000, which is simply absurd, as it is not more than sufficient to buy the real estate, build the shops and furnish the plant today, leaving the dock itself entirely out of the question.

"No Canadian came forward to put one dollar into this undertaking, but when they find out it is a paying venture, having an up to date shipbuilding plant and a profitable business, they do not hesitate to ask the Government to expropriate it under the guise of a shipbuilding scheme, which saves them asking for provincial

and city subsidies which they might not have been able to obtain. The last offer our shipbuilding committee had was in July, 1917, from an English company, which wanted \$400,000 from the province of Nova Scotia, \$200,000 from Halifax, and \$200,000 from Dartmouth, St. John, N.B., is asking \$500,000, so anyone can see the value of the Halifax drydock to the new company, and yet the Minister of Marine is reported as saying that the Halifax Shipyards, Ltd., is getting no financial assistance from the government.

"There is no precedent for such a high handed act, that is, for a minister of the crown to commandeer a property and business, and lease it to another company for one year, with the option of purchasing it at his fixed price any time within that period. It may be German practice, but certainly not the English method of doing things. Compare what we did with what the government accomplished, as regards erecting buildings after the explosion and getting the dock ready. We took the west side of the dock, where practically the work is, and proceeded to erect temporary pumps, boilers, roof over pump house and boiler house, iron stack for chimney, large ironworkers' shop, offices and stores, as well as repairing flues and putting the plant in order, all of which was done in two months. The government undertook the do the east side. One month was lost waiting for the Railways Department and the Public Works Department to decide which was to do this work which delay was a serious matter to us. On Feb. 11 the government undertook the building of the wharf and the erection of the large emergency shop. It made such slow headway that I repeatedly wired Ottawa to see if it would expedite the work. Finally, when its representative would not carry out the plans, I was obliged to call in an architect and two surveyors, who met the resident government engineer, with the result that all the work done by the department was condemned. I wired Ottawa and it sent the Assistant Deputy Minister and government engineer down, and they also condemned the work, and on May 23, three and a half months afterwards, the wharf was not ready to take a vessel, whereas, if the government had not interfered with us, we would have had it ready for transports on April 10. Consequently we were obliged to repair transports in the harbor and basin, using motor boats, which was a delay to the transports and a great loss to us, so you will see that although the government stated this was important work it gave it no attention and utterly failed to be of any assistance to us whatever; so it must invent some other excuse for taking away our property. The wharf has since settled and the only building put up by the government has been taken down, and yet the minister complains of our lack of progress.

"A further reason advanced by the Government for taking the dock away is that it is a war measure. This excuse will not stand either, as the Halifax Shipyards, Ltd., is doing no more work than we did, although we have provided it with machinery, which we had ordered before the explosion, in order to expedite transport work. This shows that there was no delay on our part to meet emergencies. We had a large stock of plates, angles, etc.,

so that we were able to repair any ship expeditiously, and we had no complaints; on the contrary, the Admiralty gave us great praise for the expeditious manner in which we got the dock and plant ready to do repair work. The building of a few ships in the future will not affect the war in the slightest degree. The war will be over long before the keels are laid, and yet our company, of over 30 years standing, is to be sacrificed, to take the place of large cash subsidies for starting ship-building, and given to Montreal men.

"The dock received from the Dominion Government only \$10,000 a year subsidy for 20 years, a total of \$200,000. St. John, N.B., is to receive \$247,500 a year for 35 years, or \$8,662,520. Our dock is a fine one, cut out of the solid rock, and can compare with any dock, but the subsidy given us will not compare in any particular with the largely increased subsidies now given by the government.

"As regards shipbuilding, our citizens have all looked forward for years with the idea that the government would do something in the way of a policy to have this industry located here. At the request of the mayor, I went to England to see what I could do in the way of getting a large firm to locate here. A representative from one of the largest firms in Britain came here and selected the site. The citizens paid for it and it is standing idle today.

"When the government stopped the reinstatement of the dock, on account of some difficulty I would like the Minister of Public Works to explain, I went to Ottawa with one of our directors from London. We saw the minister, and he informed us that the government was going to expropriate the dock. We asked him to kindly tell us what it was going to do with it, as we thought our company should know. He declined to inform us. Had he been frank, and told us the government was framing a policy for building ships, and would give \$190 a ton and supply plates from a subsidized mill at a low rate, I think he need not have gone out of Halifax for the capital. Our men are away from their homes, fighting for fair play and for the protection of small nations, and yet our patriotic government is treating this progressive English company according to the doctrine of might being right, which has been the German practice. Surely our citizens will be interested in seeing that a precedent of this kind is not made; otherwise private property would never be safe if speculators wanted it. This matter will probably go to England, where contracts are held sacred and where justice will be dispensed."

The P. Q. Towing Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital and office at Dalhousie, N.B., to carry on a general towing, wrecking and salvage business, and to own and operate G. C. Scott, Boston, Mass.; C. J. Paine, steam and other vessels, ferry boats, etc. Weston, Mass.; F. Rackemann, Milton, Mass.; P. R. Hussey, Dalhousie, N.B., and F. J. Allard, Carleton, Que., are the incorporators.

The St. John Steamship Co., Ltd., the incorporation of which, with office at St. John, N.B., was mentioned in our last issue, is having a wooden steamship built at Yarmouth, N.S., by W. D. Sweeny, for service between St. John and Bay of Fundy ports. The company intends to put other steamships in this service as the business develops. A. L. Fowler, President, Fowler Milling Co., Ltd., St. John West, N.B., is Secretary-Treasurer.

## St. Lawrence River Navigation and Power Development.

Ottawa press dispatch, Nov. 14:—With the return to a peace basis, the Dominion Government will, it is said, take up the question of joint development with the U.S. of St. Lawrence water powers. A large scheme has been tentatively submitted in its broad outlines. While regarding increased navigation facilities as paramount in the St. Lawrence, the scheme, it is estimated, would result in the development of enormous additional water power. Surplus power generated under the scheme, and not needed in Canada, it is suggested, could be exported to the U.S. under treaty arrangements which would permit of its return when required on this side of the international boundary. One phase of the scheme would entail the practical abandonment of the present canal system of the St. Lawrence, as the result of the creation of a deeper waterway by means of dams.

International development of St. Lawrence waterpowers was urged on the U.S. Government when the application of the St. Lawrence Power Co. was before the International Waterways Commission. It was represented to Washington that the endeavor should be to design at the outset a complete scheme into which successive developments might be fitted from time to time, when occasion might demand. But in such a scheme, it was pointed out, there always was present the great danger that the ultimate possibilities of St. Lawrence navigation might be neglected or irreparably injured. "On the other hand," reads an order in council passed at the time, "it is certain that the subordinate and incidental, but important, use of these international boundary waters for power purposes can never be rendered as efficient and productive through a policy of simply permitting a haphazard series of unrelated private enterprises as through a carefully considered and comprehensive scheme of development carried out under public auspices by the two countries, and obviously it is only by agreement and concerted action between the two countries that such development can be undertaken."

## Reconstructed U.S. Ships Being Finished in Canada

Seven of the 12 vessels under reconstruction on the Great Lakes for the United States Shipping Board, have been sent to Montreal to be rejoined for coastwise service. They were cut in two for passage through the Welland Canal locks. Work on the remaining 5 vessels in the Great Lakes yards is being rushed, and they will be taken to Montreal before the St. Lawrence River freezes. Men have been sent to Montreal, from the lakes, for work on vessels to be rejoined.

About 3,500,000 rivets were driven in the vessels under reconstruction on the lakes, and there was keen competition between the different yards in rivet work. The reconstructed vessels are practically new throughout, the hull being the only part of the original ship. When the vessels are rejoined and completed at Montreal, they are turned over to the U.S. Navy by the Shipping Board. The Navy then takes the vessels to the Atlantic Coast, where they are put into service.

**Swedish Steamship Confiscated.**—Judgment was delivered in the Admiralty Court at Halifax, N.S., Nov. 22, against the Swedish s.s. Svithold, which was seized in the early days of the war and taken to Halifax. The judgment confiscated the vessel and her cargo of rubber, and it was held that the master of the vessel acted in collusion with people in Pernambuco, in attempting to smuggle the third officer of a German interned steamship to Germany, that he lied when he protested that he was unaware he had the man on board, and that this alone was justification for the confiscation of the vessel and cargo. Permission to appeal to the Imperial Privy Council has been asked.

Halifax Shipyards, Ltd., has increased its authorized capital from \$6,000,000 to \$10,900,000, and the number of its directors from seven to nine, the additional two being selected by the present board from among the qualified shareholders, for the balance of the term of the existing board.

## Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie canals during October, 1918.

## Loss of Auxiliary Powered Schooner Dornfontein.

Judgment was delivered recently, following an investigation into the loss of the auxiliary powered schooner Dornfontein off Brier Island, Bay of Fundy, Aug. 2. The enquiry was held at St. John, N.B., by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Mulcahy and Jas. Hayes, nautical assessors.

The master, Capt. C. E. Dagwell, testified that he left St. John, N.B., July 26, with a crew of mixed nationalities, Norwegian, Swedish, Danish and Russian Finn, and with a cargo of lumber for Durban, South Africa. He had received clearance from the customs, and secret instructions from the transport officer, the day before. He did not know any of the crew and had no reason to suspect anyone on board. After anchoring off Parturidge Island, for the adjustment of compasses, etc., he again sailed, July 31, but the flood tide carried him back, and on Aug. 2 he was off Brier Island, steering west. On that day, the man at the wheel reported a vessel to the south, but he could not make her out after scanning her with the glass. He knew that there were submarines in the vicinity, but kept on his course. He kept looking at the vessel, but she did not appear to be coming any closer. He had seen submarines before, but could not detect anything strange about the construction of the vessel in sight. He looked occasionally until dinner time, when the vessel had been in sight about an hour and still approaching, and at noon he did not detect anything suspicious, but while at dinner a shot was fired. He then knew that there was a submarine and came on deck and ordered the helm up. Another shot was fired and a piece of shell pierced the spanker. His vessel was then hove up, and signals were hoisted on the submarine, which came up fast after the first shot was fired. After the boats were lowered he went below to get the papers which were in a tin box. The letter of instructions had not been opened. He had all his papers in his pocket when clearing at St. John, also his certificate, later placing everything in the box, except his certificate. He did not remember that instructions were given to him to destroy the secret orders in case of meeting with the enemy. He later saw the papers in the hands of the commander of the submarine. About four hours later, the schooner was in flames. He noticed that the submarine had two guns, but did not notice any other matters. The crew were very decent with him. The Dornfontein was burning when they left the submarine to row ashore, where they landed the following morning. There was no special lookout kept on his vessel. He kept his certificate in his pocket, not as a matter of precaution, but merely because he forgot to take it out. This was his second vessel lost through enemy action. He knew the papers given him by the naval authorities were to be destroyed, but he forgot to do so. He had conferred with the transport officer and had read the document in his office, but did not remember signing it. This was later disproved by the production of a copy duly signed by the master and acknowledged by him. When his other vessel, the Sunlight, was torpedoed, he saved his certificate, all other papers being lost.

The mate, C. Olsen, a Dane, stated he had been three years in Canada, and held a Danish certificate, and in general, cor-

roborated the master's evidence.

The judgment was as follows:—The court finds in the master's evidence some contradiction with respect to his knowledge of the contents of the documents containing the sailing orders, he saying at one time that he was not aware that his instructions were to destroy such instructions upon the appearance of an enemy ship, or when capture was imminent, and his subsequent admission of having read such instructions, and signed the form upon which they were printed and written, the original being before the court; thereby giving the impression that he considered those papers of secondary importance. He had placed these instructions in a box which held other ship's papers, but retained in his pocket his certificate, for which, after clearing at St. John, he had no further use until he again reached a British port. His plea is that his certificate was forgotten in his pocket, while he locked away in a box the document of great importance, which the court assumes he was obliged to consult frequently. However, on his own admission, he did not remember what those instructions were, therefore showing that he made light of his duties to his country and his flag, and of his responsibility to his owners, by handing over his orders to the enemy, although he claims that he was cool and collected. An interval of five minutes elapsed from the time he obeyed the submarine's signals to bring his papers, and rowing away from the ship's side. In military and naval circles, during war time, such neglect would bring upon the individual the odium of disloyalty, with a possible verdict advising capital punishment. In civil life, since war has begun, many persons have received long terms of imprisonment, with heavy fines, for utterances made on the spur of the moment, and which did not carry with them the importance of this unheard of neglect, to follow and execute such peremptory orders as Capt. Dagwell had received. He had been torpedoed before, he had heard that submarines were frequenting, and had created havoc, on the coast, and yet in the face of his former experience, and his knowledge of existing conditions, that danger was lurking in the western Atlantic, where many victims had already been sacrificed, he did not even give special orders to his officers or crew to be vigilant in keeping extraordinary lookout. An object was seen by him at 11 a.m. on Aug. 2. With the glasses he watched the object, but could not define it. It was still in sight at noon. He nevertheless went to his lunch, and according to the mate's evidence, did not whilst both were at table, mention what he had seen. A shot was fired which drew his attention, on the hearing of which he came on deck. A second shot was fired, at an interval of a couple of minutes, and yet on hearing and seeing this second shot, no thought was given to the secret orders he possessed. Before the second shot was fired he had ordered the helm up, with the intention of running away; but brought his ship to the wind when the second shot struck the water a few yards from him.

The court is of opinion that the master had ample time to reflect, and to destroy the document had he attached any importance to it, and the only conclusion which can be arrived at is, that he was gravely negligent; but not with criminal intent. Whilst it has been ascertained

that the crew was of mixed nationalities and that two of its members spoke German, the court has failed to connect this disaster with any preconceived, prearranged signals, or notification to the enemy. In view of the fact that no evidence has been obtained pointing to criminal intent on the part of the master, or his crew; but finding only a total disregard of the importance of his instructions, the court feels that in this instance a suspension of certificate will be a fit punishment to meet this neglect. Therefore, it suspends Capt. Charles Ephraim Dagwell, Board of Trade Certificate 99236, for the duration of the war, until such a time when ships will be permitted to sail from any port or ports without special admiralty or governmental restrictions, other than those which regulate the departure of ships in normal times, and trusts that this finding will prove a deterrent to such masters in whose minds may lurk an idea that orders and instructions, issued by established authority, are of no, or little, importance, and that the non fulfillment of such orders cannot be overlooked with impunity.

## Navigation Aids on the Great Lakes and St. Lawrence River.

All Canadian lights and fog alarms on Lake Superior will be kept in operation this autumn until the close of navigation, with the exception of Caribou Island, Quebec harbor, Daviaux Island and Michipicoten Island east end, which will be closed Dec. 15, and with the exception of Gargantua, Michipicoten harbor, Corbeil Point and Ile Parisienne, which will be closed Dec. 20; also Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island and Victoria Island, which will be closed after the last sailing to or from Port Arthur and Fort William.

All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario and connecting waters, will be maintained in operation until the close of navigation, excepting the Southeast Shoal lightship, Lake Erie, which may be removed after Dec. 1, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All Canadian lights on the River St. Lawrence will be maintained in operation until the close of navigation. All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

**Engines for War Time Vessels.**—The U.S. shipbuilding programme is being interfered with to some extent, owing to the fact that hulls have been launched rather faster than engines can be supplied for them. It is stated that about one-third of the hulls launched since the U.S. Shipping Board took hold of the situation in Aug., 1917, have not been completed owing to the non-delivery of the necessary engines. A similar condition arose in Canada in connection with the vessels being built for Great Britain under Imperial Munitions Board orders, and is one of the effects of an abnormal situation. In the U.S., naval demands on engine production have been dealt with first, and it is announced that with the general increase in production, recently launched vessels will be engined speedily.

## Wooden Shipbuilding in Canada for Foreign Countries.

Following is a complete list of licenses granted by the Dominion Marine Depart-

ment up to Nov. 16 for building wooden steamships for export:—

Date.	Builder.	Vessels.	D.W. Tons.	For
Mar. 14	British American Shipbuilding & Engineering Co., Vancouver, B.C.	20 steamships	3,000	Norway
June 3	LeClaire Shipbuilding Co., Sorel, Que.	4 aux. schooners	1,200	Norway
July 18	Three Rivers Shipyards, Ltd., Three Rivers, Que.	25 vessels	3,060	France
July 18	LeClaire Shipbuilding Co., Sorel, Que.	3 motor vessels	1,000	Norway
Sept. 6	LeClaire Shipbuilding Co., Sorel, Que.	2 aux. schooners	1,200	Norway
Sept. 12	Davie Shipbuilding & Repairing Co., Lauzon, Que.	12 steam barges	1,500	France
Sept. 12	Fraser, Brace & Co., Montreal.	8 steam barges	1,500	France
Sept. 12	New Westminster Engineering & Construction Co., New Westminster, B.C.	5 steam barges	1,500	France
Sept. 12	Wm. Lyall Shipbuilding Co., Vancouver, B.C.	8 steam barges	1,500	France
Sept. 12	Pacific Construction Co., Port Coquitlam, B.C.	2 steam barges	1,500	France
Sept. 12	Northern Construction Co., Vancouver, B.C.	5 steam barges	1,500	France
Sept. 12	National Shipbuilding Corporation, Three Rivers, Que.	10 steam barges	1,500	France
Oct. 12	Foundation Co., Victoria, B.C.	20 steamships	3,000	France
Oct. 12	Davie Shipbuilding & Repairing Co., Lauzon, Que.	1 steamship	1,500	Greece
Nov. 2	New Westminster Engineering & Construction Co., New Westminster, B.C.	3 steamships	3,200	Belgium
Nov. 2	Northern Construction Co., Vancouver, B.C.	4 steamships	3,200	Belgium
Nov. 2	Pacific Construction Co., Port Coquitlam, B.C.	3 steamships	3,200	Belgium

Total, 135 vessels; 313,700 tons d.w. capacity.

### Increase in Express Rates in the United States.

The Interstate Commerce Commission, in its decision announced recently with reference to proposed increase in express rates, indicates that the plan proposed constitutes a justifiable method of dealing with the necessities of the situation unless the Director General of U. S. Railroads should reduce the percentage basis of compensation which the express company is to pay the Director General or unless he should make what is in effect a similar change in the contract by providing that only half of the proposed increase in rates shall be made and that the entire increase thus made shall inure to the benefit of the American Railroad Express Co. These alternatives had already been carefully considered by the Director General, and the conclusion was reached that neither alternative was justifiable in the circumstances.

The contract between the Director General and the express company provides that the company shall pay to the government for the express privileges accorded to it by the Director General 59.25% of the gross revenues from the express business. This percentage represents the average which has been paid for 10 years by the express companies to the railways, and it is fair to assume that this percentage represents what is required for the performance of that part of the total service which has been performed by railways in the past. Moreover, the heavy increases in operating costs on the railways have necessitated substantial increases in freight and passenger rates averaging probably 25% or more, and averaging in the case of many passenger rates as much as 50%. In such circumstances it is clearly unwise to make an actual reduction in the basis of the government's compensation for the express privileges accorded to the express company for services on passenger trains. By the preservation of the present established basis of compensation for the express privileges, the increase in revenue of the U. S. Railroad Adminis-

tration from the carrying of express business on passenger trains will be no greater than the increased revenue paid for transportation of passengers and their baggage, and such increase from the express business is just as appropriate and necessary as the increase from the passenger business.

Another consideration of first importance is that the relatively low rates for freight rates. The result of this undue transportation of express matter have had the effect of transferring to passenger trains the transportation, as express, of many article and commodities which ought normally to go by freight. This tendency has been accentuated by the substantial increases recently made in transfer of freight matter to passenger trains has been to congest and delay the passenger train service. The proposed increase in express rates will probably fall short of establishing a proper relation between express rates and freight rates, and certainly on this account no less increase in express rates than is proposed would be advisable.

The entire amount of this increase which will inure to the express company is to be used for making necessary increases in wages of express employees. The portion of the increase which will inure to the U.S. Railroad Administration will be no more than is needed to provide for heavy increases in operating cost fairly chargeable to the express business.

### Among the Express Companies.

P. H. Findlay has been appointed Agent, Dominion Ex. Co., Cobalt, Ont., vice A. F. Robertson, transferred.

A. F. Robertson, heretofore Agent, Dominion Ex. Co., Cobalt, Ont., has been appointed agent, Sault Ste. Marie, Ont., vice J. M. Boivin, resigned.

J. W. Proulx, heretofore in General Agent's office, Canadian Ex. Co., Montreal, has been appointed route agent, vice W. G. Everett, who was appointed agent at St. John, N.B., in June.

The U.S. Railroad Administration has

announced that the American Railway Ex. Co., under a new agreement, will receive 49 3/4% of all express operating revenue, the railways receiving the balance.

Edward Allen, Superintendent, Canadian Ex. Co., Toronto, whose death was announced in our last issue, left an estate of \$16,091, including \$5,000 insurance, which, with the residue of the estate, was left to his widow, the rest being divided equally between three daughters.

The Express Traffic Association of Canada, as representing the Canadian express companies, has applied to the Board of Railway Commissioners for permission to increase express rates by 25% over the present rates per 100 lb. for points west of Sudbury, Ont., and by 37% for points east thereof.

The litigation between the British Columbia Express Co., and the Grand Trunk Pacific Ry., in connection with the construction of certain bridges across the Fraser River by the latter, and which the express company claims interfere with its business, has been ended, with the decision of the judicial committee of the Imperial Privy Council, in favor of the G.T.P.R. This matter has been before the courts for over four years, the judgment in the original trial being against the B.C. Ex. Co.'s contentions. This was reversed on appeal, and a further appeal restored the original judgment, which has been upheld in the final judgment. The bridges in question are all across the Fraser River, one just below the junction of the Nechaco River, and one each at mileage 142 and 189 on the G.T.P.R.

### Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

**Independent Pneumatic Tool Co., Chicago, Ill.**, has issued circular 28 describing and illustrating the Thor pneumatic and electric tools in detail, with complete specifications.

**Independent Pneumatic Tool Co., Chicago.**—Roger C. Sullivan has been elected a director, chairman of the board, and also a member of the executive committee, to fill vacancies caused by the death of John P. Hopkins.

**Prest-O-Lite Co. of Canada, Ltd.**—The storage battery and compressed acetylene gas manufacturing business, carried on hitherto in Canada by Prest-O-Lite Co., Inc., has been transferred to Prest-O-Lite Co. of Canada, Ltd., which has been incorporated under Canadian law, with an authorized capital of \$800,000. The company's headquarters is in its own building, Elm St. and Centre Ave., Toronto, where its welding and cutting equipment is made and marketed. It has plants for manufacturing Prest-O-Lite compound acetylene at Shawinigan Falls, Que., Merriton, Ont., and St. Boniface, Man., and has an office and warehouse in Montreal and a sales office in Winnipeg. R. H. Combs, who has been with the Prest-O-Lite Co., Inc., since 1908, in various capacities, has been appointed Manager of the new Canadian company.
